Vermont Vital Statistics Annual Report

2000

State of Vermont
Howard B. Dean, Governor

Agency of Human Services
M. Jane Kitchel, Secretary

Department of Health
Jan K. Carney, MD, MPH, Commissioner

February 2002

Printed on recycled paper.

We gratefully acknowledge the contributions of the medical records staff, physicians and midwives, funeral directors, lawyers, and court clerks for their help in collecting and providing us with this data.

We also recognize the 251 town and city clerks, who are our local registrars. Without them, these analyses of Vermont's vital statistics would not be possible.

Introduction

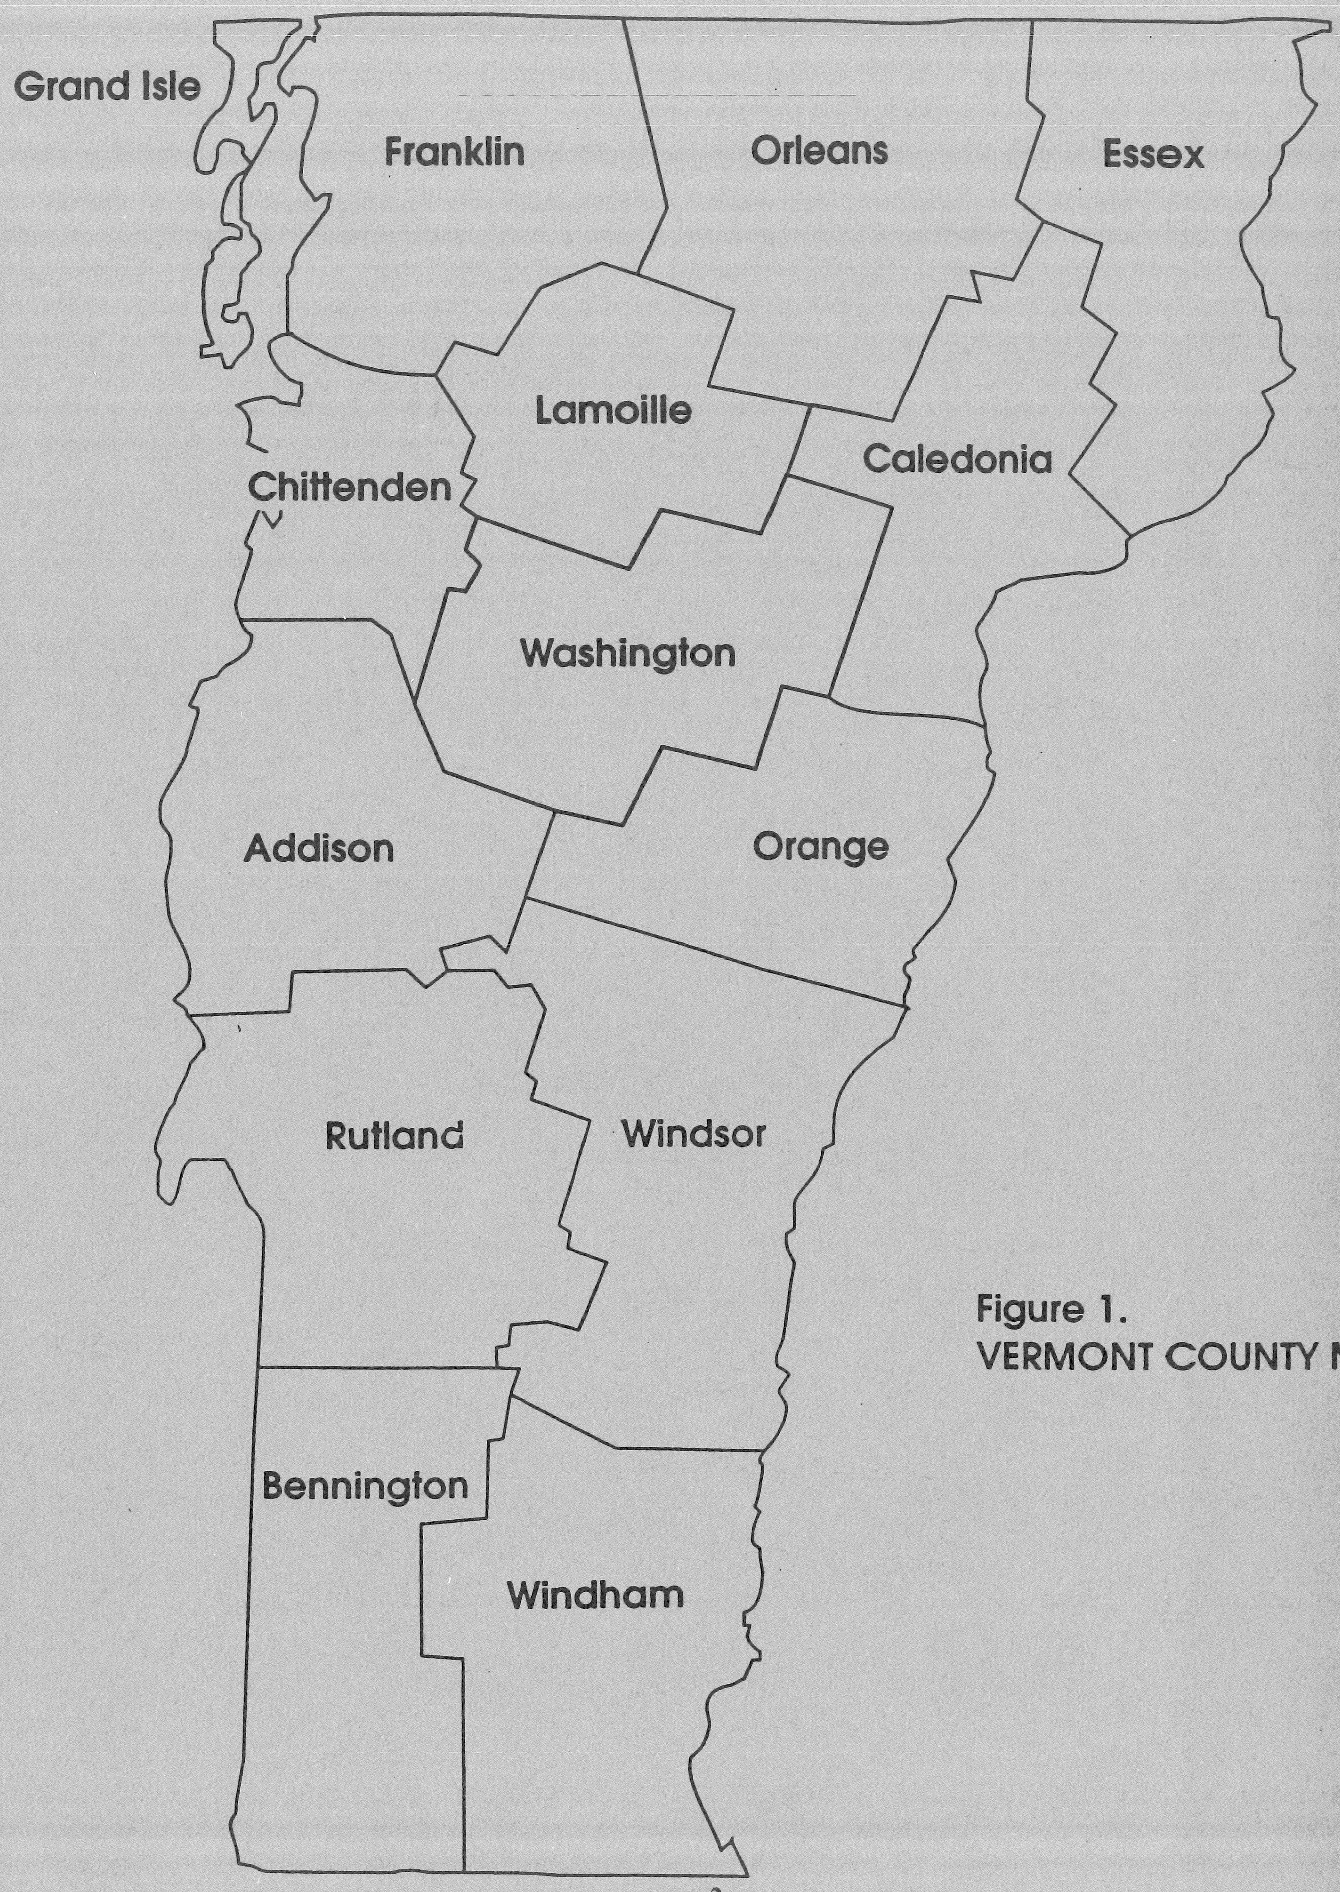

Figure 1.
VERMONT COUNTY MAP

THE VERMONT VITAL STATISTICS SYSTEM

Statewide vital registration began in Vermont in 1857, when the General Assembly passed a bill requiring that towns report all births, marriages, and deaths occurring in their jurisdiction to the Secretary of State. The legislature also required periodic publication of tables from the reports. This volume is the latest in a series of publications begun in 1857. Historically, the information contained on vital records has served as an important tool for public health officials and others by providing a picture of the general health of the population. Recognizing its importance, in 1896 the Legislature transferred responsibility for the vital statistics system to the newly formed Board of Health, the forerunner of the Vermont Department of Health. The Health Department has retained this responsibility to the present day.

Until recently, the Vermont vital statistics system monitored six types of vital events: births, deaths, marriages, divorces, fetal deaths, and abortions. With the passage of Act 91 in 2000, the establishment and dissolution of civil unions were added to the list. A civil union is a legal relationship that provides for same-sex couples in Vermont all the benefits, protections, and responsibilities under law as are granted to spouses in a marriage.

Each type of vital record follows a different path before being used to produce the statistics published here.

Births: When a birth occurs, the physician, midwife, or other birth attendant is required to complete a birth certificate and file it with the town clerk in the town of birth within 10 days. For hospital births, it is usually the medical records staff who complete the birth certificate. The completed birth certificate is recorded and filed in the town where the birth took place, and a certified copy is sent to the Health Department.

Deaths: Although a physician is responsible for filing the death certificate, the job may be, and often is, delegated to the funeral director. Most of the information needed to complete the death certificate is obtained from the family of the deceased. A physician, however, must complete the cause of death information and sign the death certificate. The funeral director files the completed certificate with the town clerk who sends a certified copy to the Health Department.

Marriages and civil unions: When a couple wishes to marry or establish a civil union in Vermont, they provide a town clerk with the information needed to complete the license. The couple takes the license to an officiant, who signs and dates it, and returns it to the town clerk. The town clerk records and files the certificate, and sends a certified copy to the Health Department.

Divorces and dissolutions: A divorce certificate or certificate dissolving a civil union is initiated by a lawyer or other individual handling the divorce or dissolution. The certificate is filed with the court as part of the divorce or dissolution proceedings. The court keeps the certificate until the decree becomes final, usually three months after the court hearing. When the decree is final, the court clerk signs the certificate and sends it to the Health Department for filing.

Fetal deaths and abortions: Reports of fetal death and induced termination of pregnancy (abortion) are sent directly to the Health Department by the physician, hospital, or clinic that performs the procedure. By law, these reports are for statistical purposes only, are not public records, and are destroyed after five years.

In addition to receiving copies of vital records from Vermont town clerks, the Health Department also receives copies of certificates of all Vermont resident births and deaths that occur in other states and in Canada. This allows the Department to do statistical analyses of vital events involving Vermont residents even if the birth or death occurred outside of the state. Health Department staff code and enter all vital records received into a computerized database. Records with unknown or unlikely data are corrected after querying the data provider. A data file containing statistical information from the records is sent to the National Center for Health Statistics to become part of a national database.

EXPLANATORY NOTES

1. The tables in this bulletin were derived from records of vital events filed at the Vermont Department of Health for calendar year 2000.

2. Rates are based on the U.S. Bureau of Census report of Vermont population in 2000.

3. Caution must be used in comparing rates due to the small population in Vermont and the small number of events recorded.

4. Rate comparisons throughout are made to the U.S. white population rather than entire U.S. population. This is because only 2.1 percent of the Vermont population was non-white as of the 2000 U.S. Census.

5. If you have questions about the information found in this bulletin, you may contact a statistician at the Vermont Department of Health, 802-863-7300.

6. If you have questions about the population figures found in this bulletin, you may call the Vermont Department of Health to request a copy of *The Population and Housing Estimates*, which also provides information about age groups other than those presented in this publication.

7. The following is a list of Vermont's counties and the county abbreviations that are used in this bulletin.

Addison	ADD	Lamoille	LAM
Bennington	BEN	Orange	ORG

Essex	ESS	Washington	WAS
Franklin	FRA	Windham	WDM
Grand Isle	GI	Windsor	WDR

DEFINITIONS, RATES, AND RATIOS

ABORTION: The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant or other than to remove a dead fetus, and which does not result in a live birth.

ABORTION RATE: Number of resident abortions occurring in Vermont x 1000, divided by the total resident women ages 15 to 44.

ABORTION RATIO: Number of resident abortions occurring in Vermont x 1000, divided by the total resident live births.

AGE ADJUSTMENT: Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. In this bulletin, county rates are adjusted using the state population distribution as the standard.

The computation formula is: The sum of (age-specific rate for each age group x standard population in that age group) multiplied by 1000, then divided by the total standard population.

AGE-SPECIFIC DEATH RATE: Number of deaths in a specific age group x 1000, divided by the total resident population in a specific age group.

AGE-SPECIFIC FERTILITY RATE: Number of resident live births to mothers in a specific age group x 1000, divided by the total female population in a specific age group (using mid-year population).

AGE-SPECIFIC PREGNANCY RATE: Number of resident pregnancies to women in a specific age group x 1000, divided by the total female population in a specific age group (using mid-year population).

ANNULMENT: The invalidation or voiding of a marriage, or civil union, which confers on the parties the status of never having been married to each other.

CIVIL UNION: A civil union is a legal relationship that provides for same-sex couples in Vermont all the benefits, protections, and responsibilities under law as are granted to spouses in a marriage.

CIVIL UNION RATE: Total number of civil unions x 1000, divided by the total resident populations (using mid-year population).

CRUDE BIRTH RATE: Number of resident live births x 1000, divided by the total resident population (using mid-year population).

CRUDE DEATH RATE: Number of resident deaths x 1000, divided by the total resident population (using mid-year population).

CUMULATIVE ROW PERCENT: The total number of cases in the current column plus each previous column in each row, expressed as a percentage of all cases in that row.

DEATH: The permanent disappearance of any evidence of life at any time after live birth.

DIVORCE: The final legal dissolution of a marriage.

DIVORCE RATE: The sum of the number of divorces and annulments, x 1000; divided by the total resident population (using mid-year population).

DISSOLUTION: The final legal dissolution of a civil union.

FERTILITY RATE: Number of resident live births to women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44.

FETAL DEATH: A reportable fetal death is a death prior to the complete expulsion or extraction from the mother of a product of conception, which has passed through at least the 20th week of gestation or weighs more than 400 grams; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

FETAL DEATH RATE: Number of resident fetal deaths x 1000, divided by the total resident live births and resident fetal deaths.

FETAL DEATH RATIO: Number of resident fetal deaths divided by total resident live births.

INFANT DEATH: Death occurring in the first year of life.

INFANT DEATH RATE: Number of resident infant deaths x 1000, divided by the total resident live births.

LIVE BIRTH: The complete expulsion or extraction from the mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

LOW BIRTH WEIGHT: A baby weighing less than 2,500 grams (5 pounds, 8 ounces) at birth.

LOW BIRTH WEIGHT PERCENT: The number of live births weighing less than 2,500 grams divided by the total number of live births.

MARRIAGE: The legal union of persons of opposite sex.

MARRIAGE RATE: Number of marriages x 1000, divided by the total resident population (using mid-year population).

NATURAL INCREASE: Occurs when the number of births is greater than the number of deaths.

NEONATAL DEATH: Death of a live-born infant before the infant becomes 28 days old (up to and including 27 days, 23 hours, 59 minutes from the moment of birth).

NEONATAL DEATH RATE: Number of resident neonatal deaths x 1000, divided by the total resident live births.

OCCURRENCE: The place where the event actually occurred.

PERINATAL DEATH: A fetal death or a death occurring before the infant becomes seven days old (up to and including six days, 23 hours, 59 minutes from the moment of birth).

PERINATAL DEATH RATE: Number of resident perinatal deaths x 1000, divided by the total resident live births and resident fetal deaths.

PLURALITY: The number of siblings born as a result of this pregnancy.

PREGNANCY RATE: Number of resident pregnancies in women ages 15 to 44 x 1000, divided by the total resident female population ages 15 to 44.

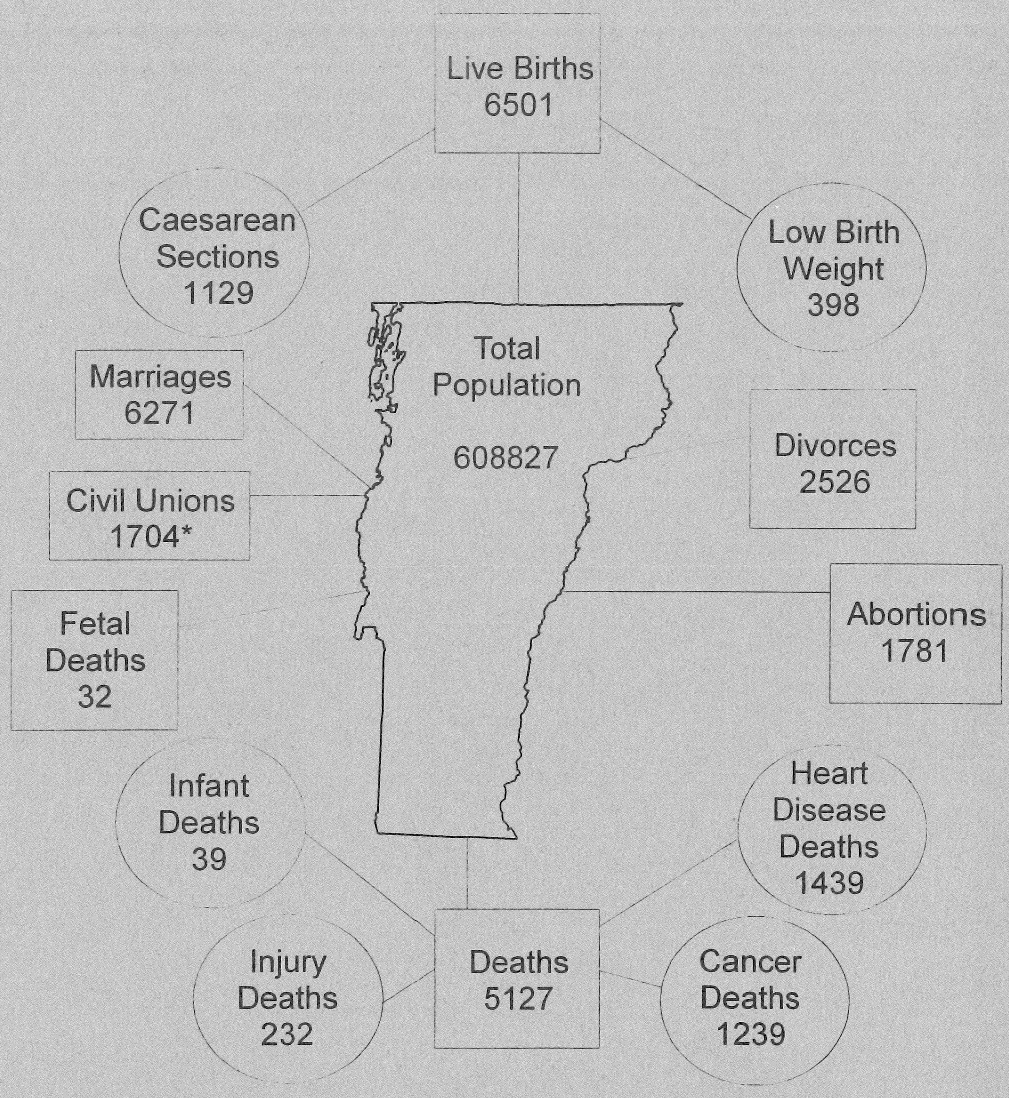
RESIDENCE: The usual place of residence for the person to whom the event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

ROW PERCENT: The number of cases in each row expressed as a percentage of all cases in that row.

WEEKS OF GESTATION: The number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

Summary and Population

Figure 2
VERMONT VITAL EVENTS FOR 2000



Marriages, divorces, civil unions, and abortions displayed above are occurrence data; all other vital events represent resident data.

* Six months only: July through December

SUMMARY STATISTICS

Occurrence statistics include all events recorded in Vermont, including those involving visitors living outside Vermont. **Resident** statistics are limited to the events involving people with legal residence in Vermont, including events occurring outside Vermont. In 2000, reports of births and deaths to Vermonters were received from 28 states and Canada.

SUMMARY OF 2000 VITAL EVENTS

	Occurrence Number	Resident Number	Resident Rate
Births	6,280	6,501	10.7/1,000 population
Deaths	5,100	5,127	8.4/1,000 population
Natural Increase	NA	1,374	2.3/1,000 population
Infant Deaths	39	39	6.0/1,000 live births
Fetal Deaths	36	32 (a)	4.9/1,000 live births and fetal deaths
Abortions	1,781	1,474 (a)	11.3/1,000 women ages 15 to 44
Marriages	6,271	NA	10.3/1,000 population (b)
Divorces	2,526	NA	4.1/1,000 population (b)
Civil Unions	1,704 (c)	NA	2.8/1,000 population (b)

2000 population: 608,827

(a) Does not include out-of-state occurrences
(b) Based on number of occurrences
(c) July through December only
NA Not Applicable

POPULATION

Vermont's population in 2000, according to the U.S. Bureau of the Census was 608,827. This is a 8.2 percent increase from the 1990 Census count of 562,758.

The largest segment of the population is the 35 to 44-year-old age group, and has been since 1991. The fastest growing segment of the population is the 35 to 59-year-old group, with a 24.4 percent increase since the 1990 Census. The under 5-year-old segment of Vermont's population is shrinking as a result of declining birth rates, showing a decrease of 17.6 percent since the 1990 Census.

The sex distribution of Vermonters has changed slightly since the 1990 Census, with males outnumbering females up to age 24, females slightly outnumbering males from age 25 to 64, and females outnumbering males by a widening margin as age increases after 65. The age-sex distribution of Vermont is illustrated in Figure 3.

a Population is the census population for those years when the census was taken and is the mid-year estimate for non-census years.
Note that mid-year population estimates are revised after each census is taken, so the 1991-1999 population figures and rates in this table differ from those presented in older publications.
b Rate per 1000 population.
c Rate per 1000 women ages 15-44
d Number of pregnancies includes Live Births and Fetal Deaths for 1857 - 1972, and Live Births, Fetal Deaths, and Abortions or 1973 - present.
e Rate per 1000 Live Births.
f Events per 1000 Live Births.
g Data for these years is based on occurrence returns only.
h 1857 population is the 1860 census population.
i 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.
J July through December 2000 only.

BIRTHS

In 2000, 6,501 babies were born to Vermont residents. This represents a decrease of 59 births from 1999. The number of babies born to Vermont residents has declined every year since 1989. The crude birth rate in 2000 was 10.7 per 1,000 Vermont residents, compared to 11.0 in 1999 and 11.1 in 1998. The U.S. white birth rate for 2000 was 14.1. Comparisons are made to the U.S. white rate because 97.6 percent of Vermont resident births were to white mothers in 2000 (Table B-5). The Vermont birth rate peaked in 1955 at 24 per 1,000 residents, then dropped for two decades, remained relatively stable from the late 1970's through the 1980's, and has been slowly and steadily decreasing since 1989.

FERTILITY

Although the crude birth rate is based on the total population, a better measure birth patterns is the fertility rate which is based on the population of women ages 15 through 44, the peak child-bearing years. The 2000 Vermont fertility rate was 49.7 per 1,000 women ages 15 through 44, a slight decrease from the 1999 rate of 50.0. The U.S. white fertility rate was 66.5 in 2000. The fertility rate in Vermont peaked in 1960 at 126, declined through the 1960's and 1970's, leveled off slightly in the 1980's and has declined through the 1990's. Age-specific fertility rates have declined among the younger age groups, and increased among the older age groups.

FIGURE 5
AGE-SPECIFIC FERTILITY RATES, SELECTED YEARS 1980-2000

AGES/YEAR	1980	1990	1999*	2000
TOTAL	**63.3**	**60.5**	**50.0**	**49.7**
15 - 19	38.5	34.1	24.8	23.4
20 - 24	102.4	93.9	76.0	74.1
25 - 29	113.0	114.6	100.3	102.1
30 - 34	60.2	79.5	82.5	84.0
35 - 44	12.5	19.6	20.9	21.3

*1999 rates have been updated using revised intercensal population estimates, and do not match those printed in last year's publication.

Slightly less than half of all births (48.0%) in 2000 were to women in their twenties (Table B-7), down from 56.1 percent in 1990. Women age 30 and over accounted for 43.9 percent of births, up from 35.4 percent in 1990. Women age 15 through 19 accounted for 8.0 percent of births, down from 8.5 percent in 1990.

BIRTH WEIGHT

The median birth weight for all resident births in 2000 was 3,430 grams (7 pounds 9 ounces). Low birth weight infants are those born weighing less than 2,500 grams (5 pounds 8 ounces). They are much more likely than heavier babies to suffer short and long term disabilities, and to die in infancy. In 2000, 6.1 percent of Vermont resident births were low birth weight (Table B-16) and 1.1 percent were very low birth weight (less than 1,500 grams or 3 pounds 5 ounces). The U.S. white low birth weight rate for 2000 was 6.5 percent. The Vermont low birth weight and very low birth weight rates remain above the *Healthy Vermonters 2010* goals of 5.0 percent and 0.9 percent, respectively.

Low birth weight rates vary by age groups: in Vermont in 2000, the low birth weight rate among

women under age 20 was 8.8 percent compared to 6.2 percent of births among women age 20-29 and 5.6 percent of births among women age 30 or older.

Infant birth weight is also positively associated with maternal weight gain: mothers who do not gain adequate weight during pregnancy are more likely to deliver low birth weight infants. On the other hand, there are risks associated with gaining too much weight including delivery complications, maternal and infant obesity. Although the weight gained by 18.4 percent of Vermont mothers in 2000 fell below the range recommended by the American College of Obstetricians and Gynecologists, 49 percent gained above the recommended range (Table B-31).

But the single most important preventable risk factor for low birth weight is smoking during pregnancy. The low birth weight rate among women who smoked cigarettes during their pregnancy was 9.3 percent compared to 5.3 percent among women who did not smoke during pregnancy (Table B-28). About one in five women reported smoking during their pregnancy in 2000, and among those who smoked before pregnancy or during the first trimester, 22.3 percent quit.

PRENATAL CARE

Early, comprehensive, and high quality prenatal care is essential for a healthy pregnancy and birth. Through prenatal care, pregnant women are screened for medical conditions and counseled on nutrition, behavioral risks (such as using tobacco and alcohol), and domestic violence.

In 2000, 88.4 percent of the babies were born to mothers who began prenatal care in the first three months of pregnancy (Table B-20). The *Healthy Vermonters 2010* goal for first trimester prenatal care is 90 percent. The percentage of women receiving first trimester prenatal care has been increasing, slowly but steadily since 1987. Eighty-five percent of U.S. white births in 2000 were to women who began prenatal care in the first trimester.

The proportion of births in 2000 to Vermont mothers who delayed care to the third trimester or received no prenatal care was 2.0 percent, down slightly from 1999. The proportion of women receiving late or no prenatal care in 2000 was 3.3 percent for U.S. white mothers. As in previous years, the age of the mother is closely associated with the time of entry to prenatal care with young women seeking care later than older women.

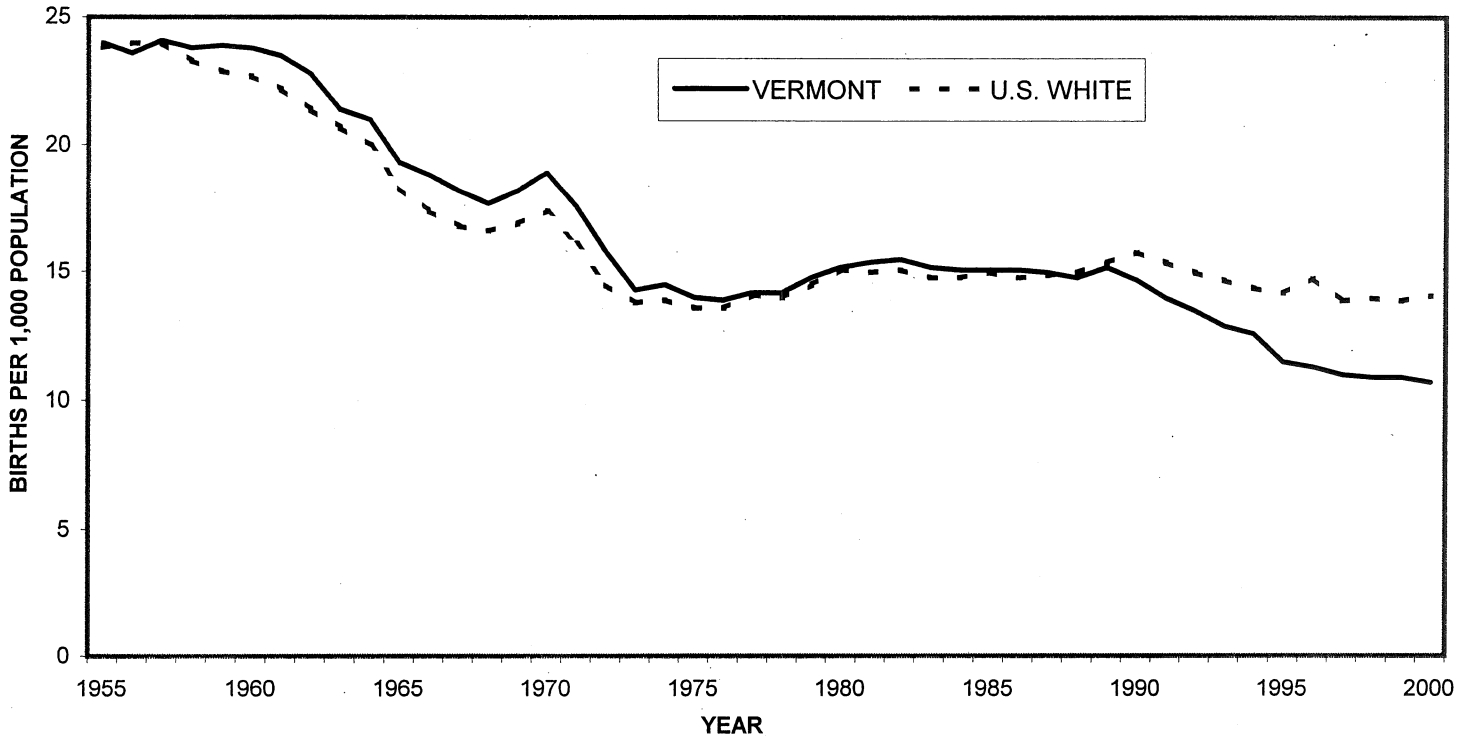
MEDICAL RISK FACTORS

Of the births in 2000, 70.1 percent of mothers had no reported medical risk factors for pregnancy (Table B-29). Of those with medical risk factors reported, the most common were pregnancy-associated hypertension, diabetes, previous pre-term or small-for-gestational-age infant, uterine bleeding, acute or chronic lung disease. In 2000, 58.0 percent of births had no complications of labor and/or delivery reported. Of those with complications, the most common complications of labor and/or delivery were meconium, dysfunctional labor, prolonged labor, fetal distress, and premature rupture of membrane.

DELIVERIES

Of babies born in Vermont hospitals in 2000, 17.9 percent were delivered by cesarean section (Table B-27) compared to 22.8 percent for U.S. white women in 2000. The primary cesarean section rate was 13.3 percent in Vermont for 2000, compared to 15.9 percent for white mothers nationally in 2000. Of mothers delivering in Vermont hospitals in 2000 who had a previous delivery by cesarean section, 40.6 percent had vaginal births, compared to 20.4 percent for U.S. white mothers in 2000.

Figure 6
VERMONT AND U.S. WHITE BIRTH RATES, 1955-2000



Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. 1955 to 1979 calculated by race of child; 1980 to 2000 calculated by race of mother.

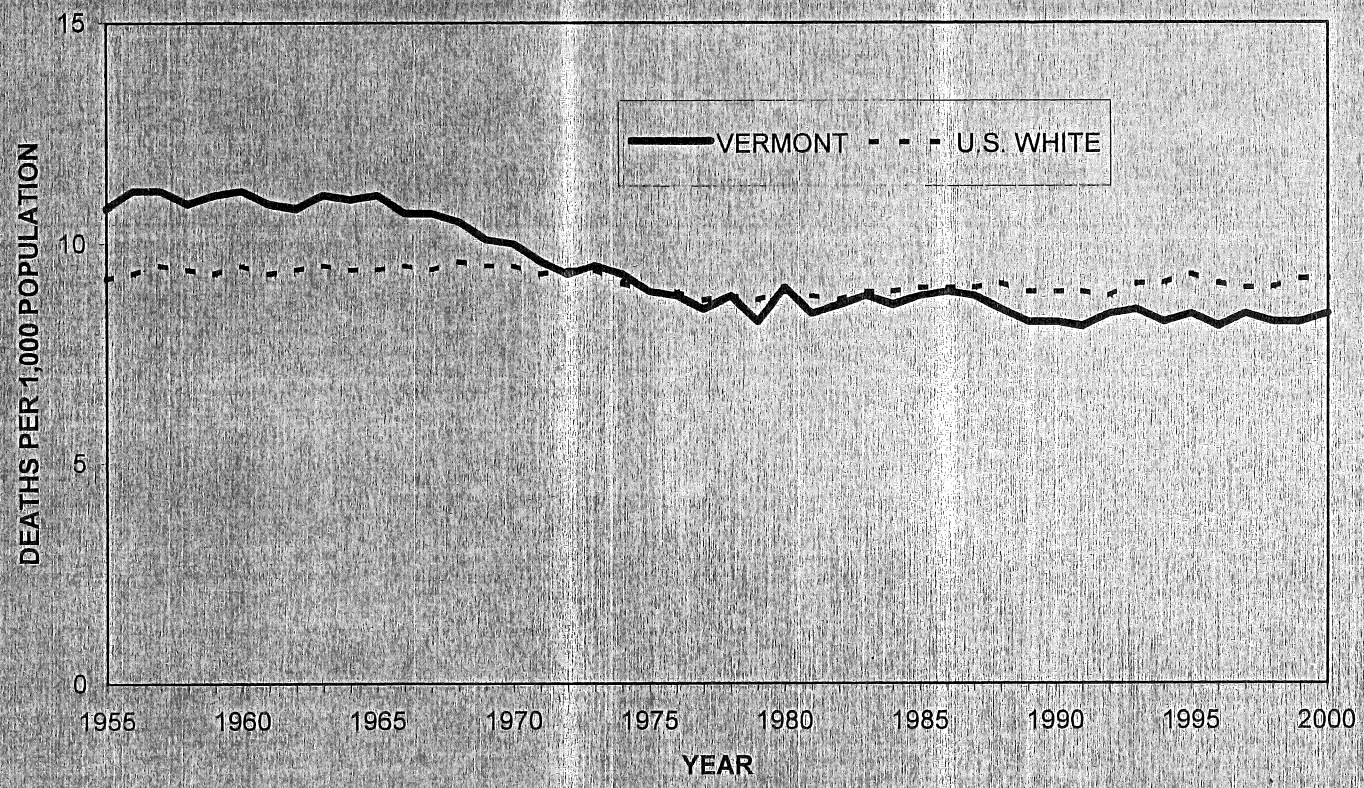
(1) WEIGHT GAIN GUIDELINES ISSUED BY INSTITUTE OF MEDICINE AND AMERICAN COLLEGE OF OBSTETRICIANS AND GYNECOLOGISTS

Deaths

Figure 9

VERMONT AND U.S. WHITE CRUDE DEATH RATES
1955-2000



Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. 2000 rate is preliminary.

DEATHS

There were 5,127 resident deaths in 2000, 144 more than in 1999. The crude death rate remained at 8.4 per 1,000 population. The death rate has fluctuated between 8.1 and 8.6 since 1988; prior to that it had been slowly declining for over two decades. The death rate was 11.2 in 1960, 10.0 in 1970, and 9.0 in 1980, and 8.2 in 1990. The Vermont crude death rate was slightly higher than the U.S. white crude death rate until 1970 when the rates converged and remained similar through 1980. Since 1981, Vermont's death rate has been slightly lower than the U.S. white rate. The preliminary 2000 U.S. white crude death rate is 9.2. Comparisons are made to the U.S. white rate because 99.4 percent of Vermont residents who died in 2000 were white (Table C-9).

For the past 40 years, the three leading causes of death in Vermont have been heart disease, cancer and stroke. Heart disease and cancer accounted for 52.2 percent of the deaths in 2000 (Table C-11). The heart disease crude death rate peaked in the 1960's at 439.5 deaths per 100,000 population. Since then, the rate has declined, and was 236.4 per 100,000 in 2000. The crude death rate from stroke (or cerebrovascular disease), the third leading cause, has also decreased significantly from a peak of 131.9 in the early 1960's to 56.5 in 2000. These dramatic declines in heart disease and stroke are even more remarkable given that the average age of the population has increased. Crude death rates for cancer (or malignant neoplasms) have risen steadily over the past few decades from 167 in the period from 1969 to 1971 to 203.5 in 2000. This trend is in part a result of the aging population and the rising death rates for lung cancer.

Chronic lower respiratory disease (formerly referred to as chronic obstructive pulmonary disease) has been the fourth leading cause of death in Vermont since 1985. The crude death rate from this cause has increased from 33.0 in the period from 1979 to 1981 to 50.9 in 2000.

Accidents (or unintentional injuries) and diabetes were the fifth and sixth leading causes of deaths in Vermont in 2000, as they were in 1999. The crude death rate from accidents peaked at 58.4 in the period from 1969 to 1971 and declined to 31.3 in 1994 to 1996. In recent years, the death rate from accidents has increased, and in 2000 was 38.1 per 100,000 population. Diabetes mortality has generally increased over the last 10 years, and in 2000 the crude rate was 26.9 per 100,000 population.

Influenza and pneumonia remained the seventh leading cause, with a crude rate of 19.5 deaths per 100,000 in 2000. The crude death rate from Alzheimer's disease has steadily increased throughout the 90's and, after moving up from the tenth leading cause to the eighth in 1999, it remained the eighth leading cause with a crude rate of 22.0 in 2000.

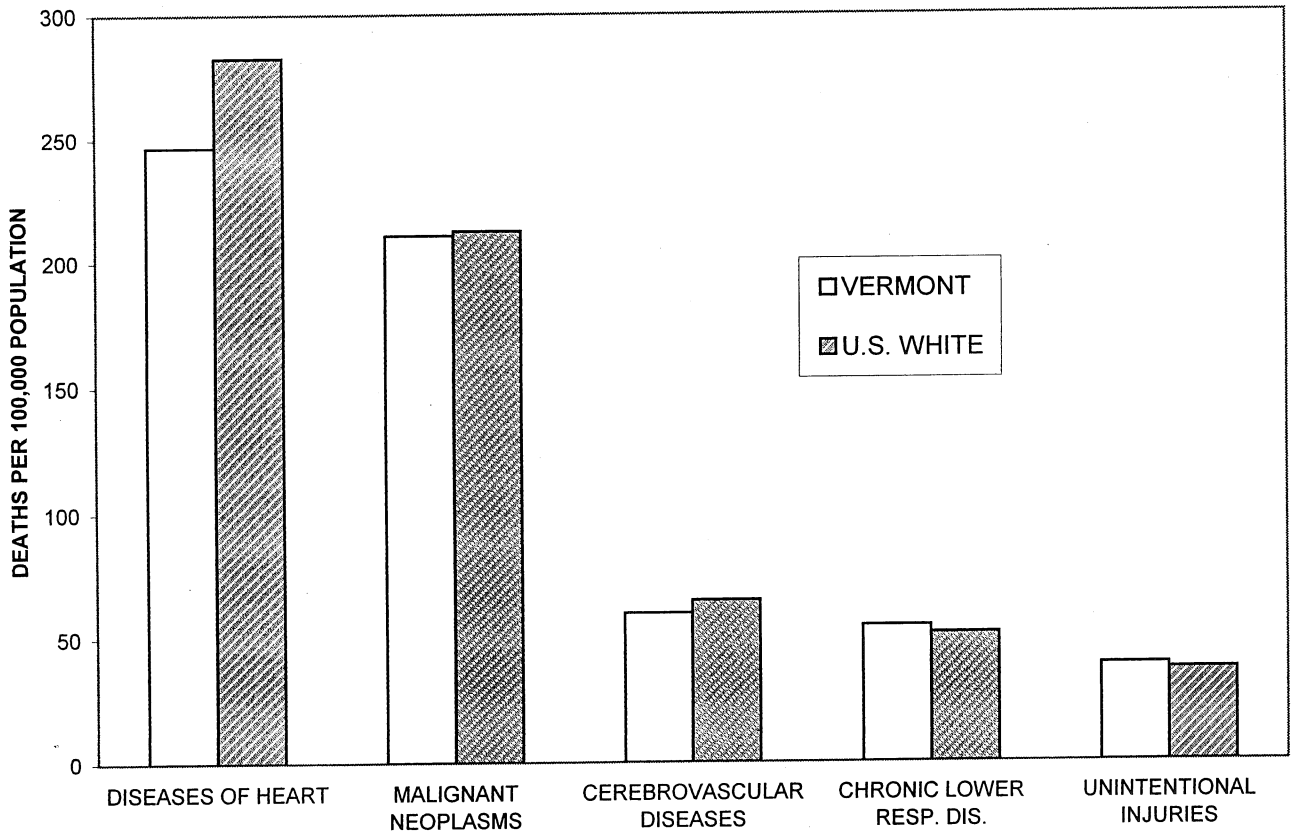
Although the crude death rate for intentional self-harm (or suicide), Vermont's ninth leading cause, has been relatively stable over the past 30 years, it increased to 12.6 deaths per 100,000 in 2000. Nephritis/nephrosis (or kidney diseases) was the tenth leading cause with a 2000 crude rate of 10.0.

The leading causes of death varied considerably with age (Tables C-2 and C-14). Unintentional injuries were the leading cause of death for people age 5 to 34. Cancer, followed by heart disease, were the leading causes of death among people ages 35 to 74. After age 75, heart disease was the leading cause of death.

Death rates dramatically increase after age 75. People age 75 and over accounted for 61 percent of total deaths, but comprise only 6.0 percent of the total population. Except for influenza and pneumonia, the leading causes of death in this age group are all chronic diseases.

Deaths occurring in a hospital accounted for 41.2 of Vermont resident deaths (Table C-21) down from 62 percent in 1980 and 53 percent in 1990. In 2000, 23.4 percent of Vermont deaths occurred at home, and 26.2 percent occurred in a nursing home.

Figure 10
FIVE LEADING CAUSES OF DEATH
2000 VERMONT AND U.S. WHITE



Vermont death rates are age-adjusted to the 1999 U.S. white population. U.S. white rates shown are for 1999.

(a) CAUSE OF DEATH IS CODED BY THE INTERNATIONAL CLASSIFICATION OF DISEASES. DEATHS IN 1979 TO 1998 WERE CODED ACCORDING TO ICD-9. EFFECTIVE JANUARY 1, 1999 DEATHS WERE CODED ACCORDING TO ICD-10. SINCE SIGNIFICANT CHANGES WERE MADE IN ICD-10, THE CODE NUMBERS FOR ICD-9 AND ICD-10 ARE GIVEN IN ADDITION TO COMPARABILITY RATIOS WHICH HAVE BEEN APPLIED TO THE EARLIER RATES TO MAKE THEM COMPARABLE TO THE ICD-10 RATES.

(b) RATES PRESENTED HERE MAY DIFFER FROM THE 1999 VITAL STATISTICS REPORT BECAUSE THE COMPARABILITY RATIOS HAVE BEEN EXTENDED TO FOUR DECIMAL PLACES, AND THE 1991-1999 POPULATION ESTIMATES HAVE BEEN REVISED BASED ON THE 2000 CENSUS.

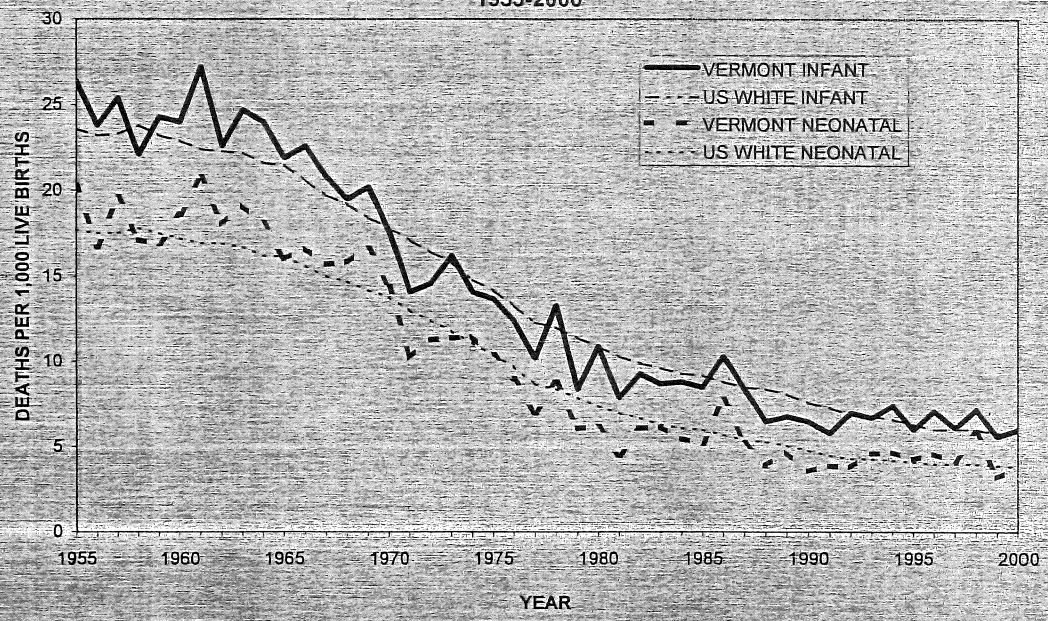
Infant Deaths, Fetal Deaths, Abortions and Pregnancies

Figure 11a

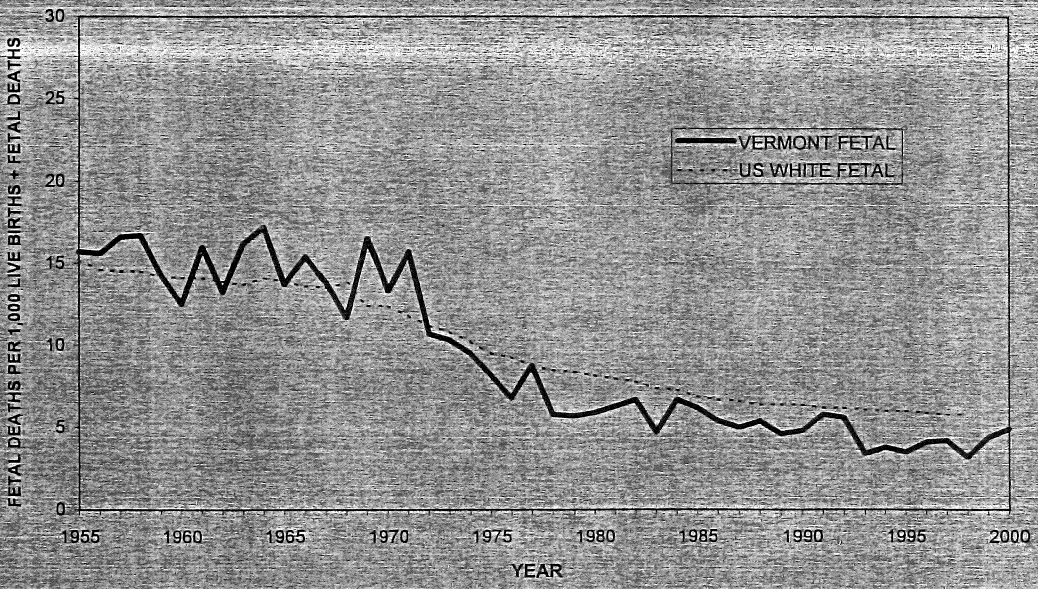
VERMONT & U.S. WHITE
INFANT AND NEONATAL MORTALITY RATES
1955-2000



Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. White data for 2000 is preliminary.

Figure 11b

VERMONT & U.S. WHITE
FETAL MORTALITY RATES
1955-2000



Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. rates for 1999 and 2000 are not available.

INFANT DEATHS, FETAL DEATHS, ABORTIONS AND PREGNANCIES

INFANT DEATHS

In 2000, there were 39 resident infant deaths for a rate of 6.0 infant deaths per 1,000 live births. This is an increase from the 1999 rate of 5.6, the lowest rate ever in Vermont (Table A-1). The rate remains above the *Healthy Vermonters 2010* goal of 4.5, and also higher than the preliminary 2000 U.S. white rate of 5.7. Comparisons are made to the U.S. white rate because 100 percent of the Vermont resident infant deaths were to whites in 2000. The Vermont infant mortality rate steadily declined from 24.0 in 1960 to 5.8 per 1,000 live births in 1991. The rate fluctuated through the rest of the 90's.

Twenty-five (64 percent) of the infant deaths occurred during the neonatal period, that is, before the infant became 28 days old (Table D-3). The neonatal death rate was 3.8 deaths per 1,000 live births (Table D-5). The preliminary 2000 U.S. white neonatal death rate was 3.8. The Vermont neonatal death rate has decreased over the past four decades from 18.6 in 1960, to 14.4 in 1970, to 6.2 in 1980, to 3.6 in 1990 (Table A-1). The rate increased through the nineties to a high of 5.9 in 1998 before dropping to the lowest rate ever in Vermont: 3.2 in 1999.

The leading causes of infant deaths (Table D-9) are prematurity and related causes (8), SIDS (6), maternal complications (4), and complications of placenta, cord, and membranes (4), and congenital anomalies (3).

One of the most important risk factors in infant mortality is low birth weight. Of resident infants who died in 2000, 64.8 percent had a birth weight less than 2500 grams (5 pounds 8 ounces), while 6.1 percent of all resident births were low weight. The infant mortality rate for low weight births was 60.3 deaths per 1,000 live births. Age of mother is also related to infant mortality (Table D-5). From 1998 to 2000, the infant mortality rate for mothers 15 through 19 years of age was 12.0, for mothers age 20 through 24 the rate was 7.3, and for mothers 40 through 44 years the rate was 5.6. The youngest maternal age group also had the highest neonatal death rates at 9.5 for the 15-19 year olds.

FETAL DEATHS

Exchange of reports of fetal deaths and abortions among states is inconsistent. Therefore, statistics concerning these events reflect primarily occurrences within Vermont and may not necessarily reflect the true experience of Vermont residents.

There were 32 resident fetal deaths in 2000 (Table D-1) for a rate of 4.9 per 1,000 live births and fetal deaths, up from 4.4 per 1,000 live births and fetal deaths in 1999. Of the fetal deaths in Vermont, 66 percent weighed less than 2500 grams (Table D-7). From 1998 to 2000, the fetal death rates were highest in the two youngest age groups: 6.9 per 1,000 live births for women age 15 to 19, and 5.1 for women age 20 to 24 (Table D-5).

VERMONT ABORTIONS

There were 1,781 abortions performed in Vermont in 2000, the first increase in number from the previous year, since 1989 when 3,313 were performed. Vermont residents accounted for 1,474, or 82.8 percent. This represents a rate of 11.3 per 1,000 women age 15 to 44.

The abortion ratio is the number of resident abortions occurring in Vermont times 1,000, divided by the total resident live births. The abortion ratio for 2000 was 226.7 abortions per 1,000 live births, up from 221.6 in 1999. The most recent U.S. white abortion ratio available was 188 per 1,000 live births, in 1998.

Women age 20 to 24 had the highest age-specific abortion rate, 32.2 per 1,000 women, followed by women age 25 to 29 at 20.2. First trimester abortions accounted for 96 percent of all Vermont abortions and 63.7 percent of all Vermont abortions were for pregnancies of less than 9 weeks duration. See Appendix B for the method used to compute the number of weeks of gestation.

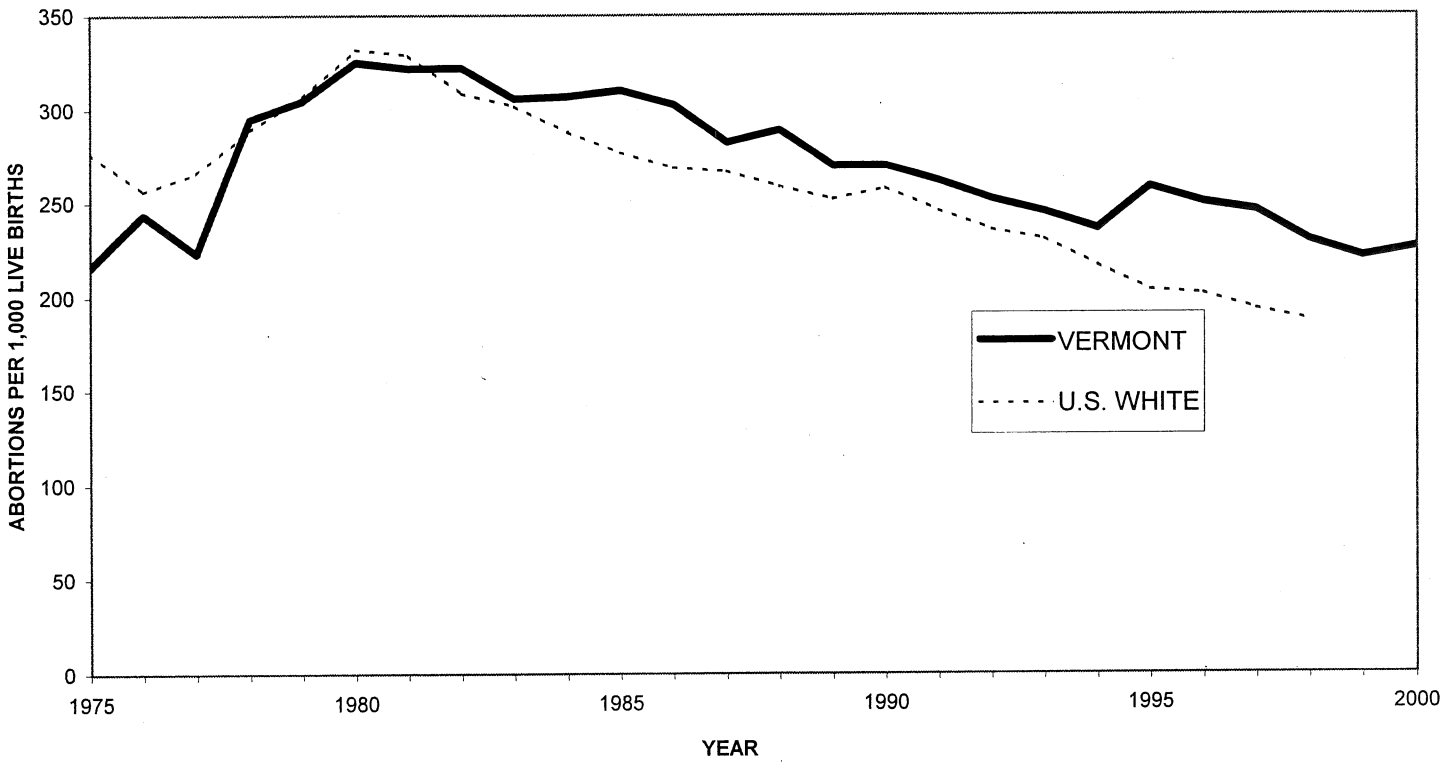
VERMONT RESIDENT PREGNANCIES

The pregnancy rate is derived by adding live births, fetal deaths and abortions. Due to non-reporting of out-of-state abortions and fetal deaths, as well as non-reporting of fetal deaths prior to 20 weeks of gestation, these rates represent underestimates of the actual number of pregnancies. The extent of these underestimations may differ among counties since residents of some counties may be more likely to use out-of-state services.

In 2000, the pregnancy rate in Vermont was 61.2 pregnancies per 1,000 women age 15 to 44 (Table F-1), compared to 61.4 in 1999, 77.1 in 1990, and 84.2 in 1980. The pregnancy rate peaked at 127.6 in 1960 and has dropped fairly steadily ever since (Table A-1).

The 2000 teen pregnancy rate was 37.2 pregnancies per 1,000 women age 15 to 19 years (Table F-1). This is down from 38.7 in 1999, and in general the teen pregnancy rate has been decreasing since 1991. In 2000, the highest pregnancy rate was seen in women 25 to 29 years of age at 119.6, followed by the 20 to 24 age group at 100.2. The lowest rate was for women age 35 to 44 at 25.3.

Figure 12
VERMONT AND U.S. WHITE ABORTION RATIOS
1975-2000



Data points for the U.S. white population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. ratios for 1999 and 2000 are unavailable. U.S. ratios are based on reporting states.

40-44 YEARS	1.9	5.6	3.7	5.6
1998-2000	4.2	7.8	4.3	6.3
1998 TOTAL	3.2	7.7	5.9	7.2
1999 TOTAL	4.4	7.3	3.2	5.6
2000 TOTAL	4.9	8.3	3.8	6.0

NOTES:

Fetal and perinatal death rates are the number of resident fetal deaths and perinatal deaths per 1,000 resident live births and fetal deaths.

Neonatal and infant death rates are the number of resident neonatal and infant death rates per 1,000 resident live births.

Data for the years 1998-2000 have been combined to produce more stable rates.

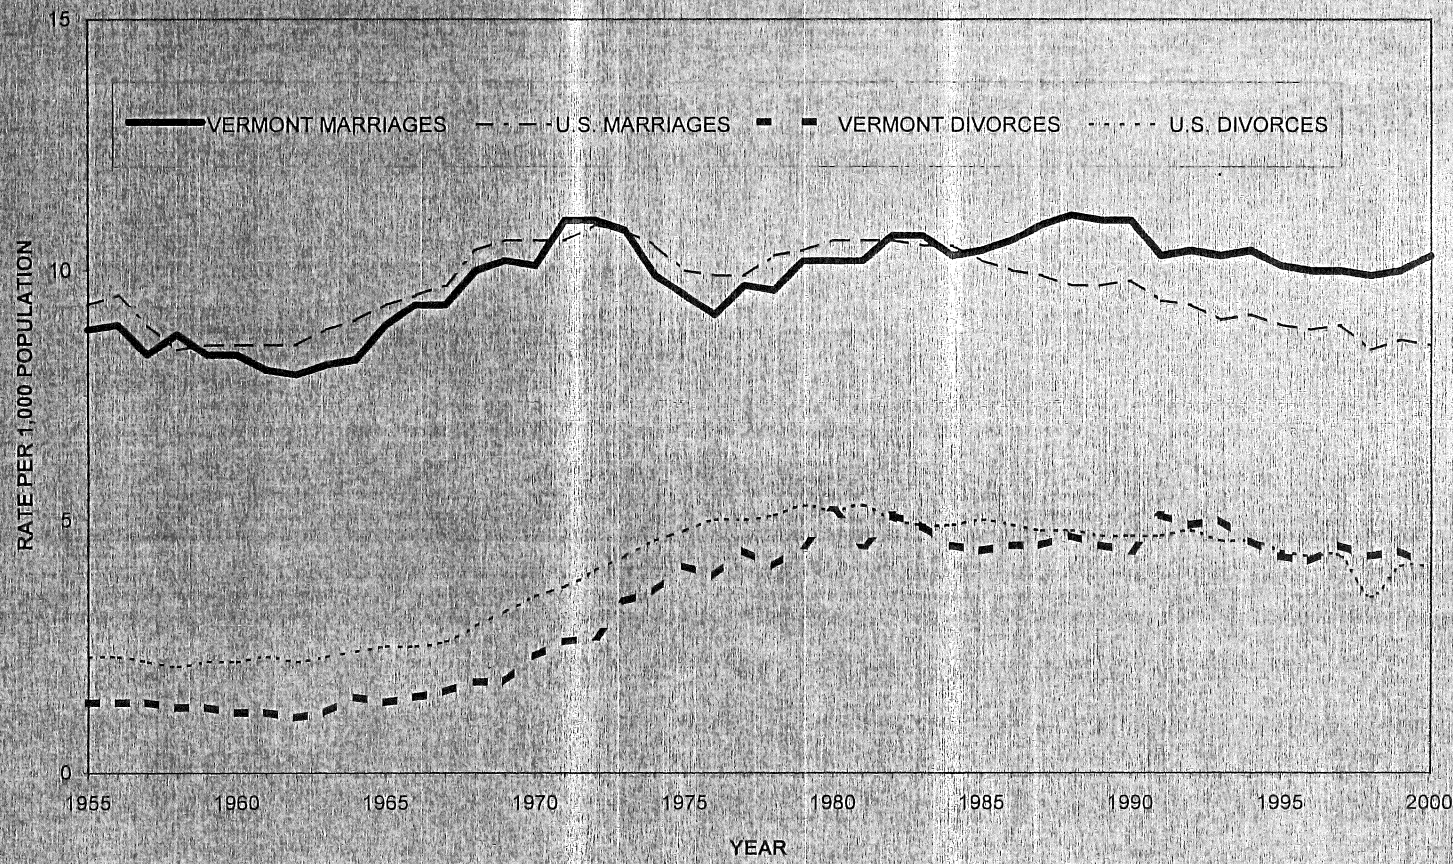
Marriages and Divorces

Figure 13

VERMONT AND U.S. MARRIAGE AND DIVORCE RATES 1955-2000



Data points for the U.S. population can be found in Appendix D. Vermont data points can be found in Table A-1. U.S. rates are provisional for 2000.

MARRIAGES & DIVORCES

MARRIAGES

In 2000, 6,271 marriages were performed in Vermont, 215 more than in 1999. The VT rate was 10.3 per 1,000 population, higher than the 2000 U.S. provisional rate of 8.5. Marriages between two out-of-state residents accounted for 33.2 percent of the marriages in Vermont (Table G-2).

There was the usual seasonal variation with more marriages occurring in summer than in any other season. September was the most popular month for marriages in 2000 (Table G-7).

Less than half (49 percent) of the marriages were firsts for both bride and groom (Table G-5). Sixty percent were first marriages for the bride and almost 62 percent were first marriages for the groom. Remarriages for both bride and groom accounted for 27.4 percent of marriages in Vermont.

The percentage of civil ceremonies increased to 57.1 percent in 2000. This percentage has increased every year since 1990 when it was 47.2 percent.

DIVORCES

There were 2,526 divorces granted in 2000, a decrease of 126 from 1999. This represents a rate of 4.1 per 1,000 residents, equal to the U.S. 2000 provisional rate.

The median length of marriages ending in divorce was 9 years 3 months, with a range of 2 months to 57 years 4 months. Fifty seven percent of divorces followed a separation of a year or longer. The median age at the time of divorce was 38 for women with a range of 17 to 84 years. The median age at the time of divorce was 40 for men with a range of 19 to 88 years.

In 2000, 50.0 percent of divorces involved at least one child under the age of 18 (Table H-5), and a total of 2,236 children (Table H-7) were involved in a divorce. This represents 1.5 percent of all children residing in Vermont.

Civil Unions and Dissolutions

CIVIL UNIONS

On July 1, 2000, a new Vermont law went into effect granting same-sex couples in Vermont all the benefits, protections and responsibilities under law as are granted to spouses in a marriage. From July through December 2000, 1,704 civil unions were established in Vermont, with the highest number occurring in July (405).

Civil unions involving out-of-state residents accounted for 78 percent of the total number of civil unions (Table I-2). The states with the largest number of residents who established civil unions are New York, followed by Massachusetts and California. The largest number of Vermont residents who established civil unions resided in Chittenden County (Table I-3).

Almost sixty-nine percent of the civil unions were between female partners, and the most common age range for both male and female partners is 35 to 39 (Table I-4). Civil union partners of both genders tend to be highly educated: 66% completed at least four years of college (Table I-5).

Table I-6 shows the total number of civil unions or marriages, including the current civil union, that each person has been a party to during their lives. For 78 percent of the civil union partners, this was their first union, or marriage.

DISSOLUTIONS

The dissolution of civil unions follows the same procedures, same requirements, rights, and obligations as divorces. There were no dissolutions of civil unions in 2000.

APPENDIX B

OBSTETRIC DATES AND INTERVALS

MONTH PRENATAL CARE BEGAN

In 1988, the Vermont Department of Health adopted the National Center for Health Statistics method of calculating the month prenatal care began. This allows Vermont data to be more easily compared to national data, and eliminates any errors that could be introduced by hospitals using different reporting methods.

The calculation is based on the month of last menses and the month of the first prenatal visit. For example, if the date of last menses was January 1 and the date of first prenatal visit was March 10, the calculation shows that prenatal care began in the second month.

GESTATIONAL AGE

Live Births and Fetal Deaths: National Center for Health Statistics methodology is used to determine gestational age. The weeks of gestation are computed from the date of last menses and the date of birth, if the data are available and the computed weeks are between 15 and 55.

An edit is then run that checks whether the birth weight of the record is within two standard deviations of the average birth weight for the calculated weeks of gestation. If the birth weight is within the bounds for the calculated weeks of gestation, then the *calculated* weeks of gestation becomes the assigned gestational age. If the birth weight is not within the bounds for the calculated weeks, but it is within the bounds for the clinical estimate of gestation, then the *clinical estimate* of gestation is assigned as the gestational age. If the birth weight does not fit within the bounds for either the calculated weeks of gestation or the clinical estimate of gestation, the gestational age is designated "unknown". If the month and year (for date of last normal menses) are given, but the day is missing, the gestational age is *imputed* using the gestational age of the preceding record that has complete data with the same computed month of gestation and the same 500-gram birth weight interval.

In 2000, **88.1** percent of the records used the **calculated** weeks, **10.6** percent used the **clinical estimate** of the weeks, and the remaining records were designated **"unknown"** gestational ages.

Abortions: Gestational age is calculated from the date of last normal menses and date of abortion. The clinically estimated weeks is used if the date of last normal menses is unknown, or if the calculated weeks and the clinically estimated weeks are more than two weeks apart.

NUMBER OF PRENATAL VISITS

Since 1985, hospitals report the date of the first and last recorded prenatal visits and the number of visits recorded. In 1986, a procedure was adopted for births of 36 or more weeks of gestation with less than 20 reported visits, and whose last reported visit was within four weeks of delivery. In these cases the Vermont Department of Health records the number of prenatal visits reported by the hospitals **plus** one visit for every week between the date of the last recorded visit and the delivery date.

a NCHS. "Births: Final Data for 2000". Monthly Vital Statistics Report; Vol. 50, No.5, February 12, 2002. 1955-1975 rates based on race of child; 1980-1992 were previously reported by race of child, now reported by race of mother. Crude birth rates are per 1000 population. Fertility rates are per 1000 women aged 15-44.

b NCHS. "Deaths: Preliminary Data for 2000". National Vital Statistics Report; Vol. 49, No. 12, October 9, 2001. Crude death rates are per 1000 population.

c Prior to 1980, infant deaths based on race of decedent, live births based on race of child. For 1980-1999, infant deaths and live births based on race of mother. Rates are per 1000 live births.

d Health, United States, 2001. Hyattsville, Maryland: National Center for Health Statistics, 2001. Fetal rates are per 1000 live births plus fetal deaths.

e Health, United States, 2001. Hyattsville, Maryland: National Center for Health Statistics, 2001. Abortion ratio is per 1000 live births.

f NCHS. "Births, Marriages, Divorces, and Deaths: Provisional Data for January-December 2000". National Vital Statistics Report; Vol. 49, No. 6, August 22, 2001. These data are for all races. Rates are per 1000 population.

18. DATE OF FIRST PRENATAL VISIT *(Month, Day, Year)*

19. DATE OF LAST RECORDED VISIT *(Month, Day, Year)*

20. NUMBER OF RECORDED VISITS

15c. DATE OF LAST LIVE BIRTH *(Month, Day, Year)*

15e. DATE OF LAST OTHER TERMINATION *(Month, Year)*

21. WEIGHT OF FETUS *(Specify Unit)*

22. CLINICAL ESTIMATE OF GESTATION *(Weeks)*

23a. MEDICAL RISK FACTORS FOR THIS PREGNANCY *(Check all that apply)*

- Anemia (Hct. <30/Hgb. <10) ..... 01 ☐
- Cardiac disease ..... 02 ☐
- Acute or chronic lung disease ..... 03 ☐
- Diabetes ..... 04 ☐
- Genital herpes ..... 05 ☐
- Hydramnios/Oligohydramnios ..... 06 ☐
- Hemoglobinopathy ..... 07 ☐
- Hypertension, Chronic ..... 08 ☐
- Hypertension, pregnancy-associated ..... 09 ☐
- Eclampsia ..... 10 ☐
- Incompetent cervix ..... 11 ☐
- Previous infant 4000 + grams ..... 12 ☐
- Previous preterm or small-for-gestational-age infant ..... 13 ☐
- Renal disease ..... 14 ☐
- Rh sensitization ..... 15 ☐
- Uterine bleeding ..... 16 ☐
- None ..... 00 ☐
- Other _____ 17 ☐ *(Specify)*

23b. OTHER RISK FACTORS FOR THIS PREGNANCY *(Complete all items)*

- Tobacco use during pregnancy ..... Yes ☐ No ☐
  - Average number cigarettes per day ____
- Alcohol use during pregnancy ..... Yes ☐ No ☐
  - Average number drinks per week ____
- Weight gained during pregnancy _____ lbs.

24. METHOD OF DELIVERY *(Check all that apply)*

- Vaginal ..... 01 ☐
- Vaginal birth after previous C-section ..... 02 ☐
- Primary C-section ..... 03 ☐
- Repeat C-section ..... 04 ☐
- Forceps ..... 05 ☐
- Vacuum ..... 06 ☐
- Hysterotomy/Hysterectomy ..... 07 ☐

25. OBSTETRIC PROCEDURES *(Check all that apply)*

- Amniocentesis ..... 01 ☐
- Electronic fetal monitoring ..... 02 ☐
- Induction of labor ..... 03 ☐
- Stimulation of labor ..... 04 ☐
- Tocolysis ..... 05 ☐
- Ultrasound ..... 06 ☐
- None ..... 00 ☐
- Other _____ 07 ☐ *(Specify)*

26. COMPLICATIONS OF LABOR AND/OR DELIVERY *(Check all that apply)*

- Febrile (>100° F. or 38° C.) ..... 01 ☐
- Meconium, moderate/heavy ..... 02 ☐
- Premature rupture of membrane (>12 hours) ..... 03 ☐
- Abruptio placenta ..... 04 ☐
- Placenta previa ..... 05 ☐
- Other excessive bleeding ..... 06 ☐
- Seizures during labor ..... 07 ☐
- Precipitous labor (<3 hours) ..... 08 ☐
- Prolonged labor (>20 hours) ..... 09 ☐
- Dysfunctional labor ..... 10 ☐
- Breech/Malpresentation ..... 11 ☐
- Cephalopelvic disproportion ..... 12 ☐
- Cord prolapse ..... 13 ☐
- Anesthetic complications ..... 14 ☐
- Fetal distress ..... 15 ☐
- None ..... 00 ☐
- Other _____ 16 ☐ *(Specify)*

28. NAME OF PHYSICIAN PROVIDING PRENATAL CARE

27. CONGENITAL ANOMALIES OF CHILD *(Check all that apply)*

- Anencephalus ..... 01 ☐
- Spina bifida/Meningocele ..... 02 ☐
- Hydrocephalus ..... 03 ☐
- Microcephalus ..... 04 ☐
- Other central nervous system anomalies *(Specify)* _____ 05 ☐
- Heart malformations ..... 06 ☐
- Other circulatory/respiratory anomalies *(Specify)* _____ 07 ☐
- Rectal atresia/stenosis ..... 08 ☐
- Tracheo-esophageal fistula/Esophageal atresia ..... 09 ☐
- Omphalocele/Gastroschisis ..... 10 ☐
- Other gastrointestinal anomalies *(Specify)* _____ 11 ☐
- Malformed genitalia ..... 12 ☐
- Renal agenesis ..... 13 ☐
- Other urogenital anomalies *(Specify)* _____ 14 ☐
- Cleft lip/palate ..... 15 ☐
