

About Death Rate Measures

Dying within 30-days after getting care in the hospital for a heart attack

Hospitals keep track of how many of their patients died soon after getting care for a heart attack (death rate). These rates show how many patients died within 30 days of going to the hospital for a heart attack and takes into account how sick patients were before they went to the hospital.

A lower score is better.

Ratings include a significance test that makes us more confident the hospital rating is accurate.

This measure is endorsed by the National Quality Forum, an independent organization that sets standards for health care quality measurement.
