## Acknowledgments

The production of this document would not be possible without the assistance of many individuals and the cooperation of the hospitals. The Vermont Green Mountain Care Board (GMCB) thanks the Vermont Association of Hospitals and Health Systems - Network Services Organization (VAHHS-NSO) for providing assistance under a contract with GMCB and for working with the Vermont hospitals to ensure timely and accurate reporting of the data. GMCB also thanks the participating hospitals for their efforts in submitting the data and responding to requests for clarification and corrections.

### Disclaimer

Vermont hospital discharge data for use in this publication were supplied by the VAHHS-NSO reporting system, Vermont EXPLOR, under a contract with GMCB. These data were supplied upon the authorization of the hospitals through agreements between VAHHS-NSO and each participating hospital.

After receipt of the data files from VAHHS-NSO, the data undergo additional editing and processing by the Vermont Department of Health, under an agreement with GMCB, before inclusion in the Vermont Uniform Hospital Discharge Data Set (VUHDDS). The VUHDDS is used to construct this report and is the official state data file available to the public. The Health Department does not assume responsibility for errors in the data due to coding or processing by hospitals, VAHHS-NSO Vermont EXPLOR, or other data providers.

### Vermonters Using Out-of-State Hospitals

GMCB has data sharing agreements with state agencies in New Hampshire, Massachusetts, and New York to receive hospital

discharge records for Vermont residents using hospital services outside of Vermont. Unfortunately, the timeliness of the annual data exchange between Vermont and New Hampshire has been seriously impacted by major changes in New Hampshire's data collection and processing technologies. At the time of this report, New Hampshire has not released data to Vermont beyond 2015. In addition, Massachusetts has not released data to Vermont since 2013 due to changes in their data release policies.

The most recent population-based report, *Vermont Hospital Utilization Reports* (VHUR), was published in 2011 based on data from 2009. In 2009, approximately 9,000 of 52,000 Vermont resident inpatient discharges occurred at New Hampshire hospitals and another 2,000 at Massachusetts and New York hospitals.

### Requesting Hospital Data Files

Public Use data files are available on the Health Department website: <http://healthvermont.gov/health-statistics-vital-records/health-care-systems-reporting/hospital-discharge-data>.

Information on requesting research hospital discharge data sets (that include non-public data elements not found in Public Use data files) also can be found on the Health Department website: <http://healthvermont.gov/health-statistics-vital-records/health-care-systems-reporting/hospital-discharge-data>.

For any additional information concerning the data sets, contact the Vermont Green Mountain Care Board at (802) 828-2900 or (800) 631-7788.

**Note:** Changes in coding systems used by the hospitals occurred in 2014 and 2015. Discussion of these changes can be found in the User's Guide and in Appendix B.

# 2017 Vermont Hospitals Report

## User's Guide

### Introduction

*The Vermont Hospitals Report* presents information about patient health issues and hospital services provided in fourteen Vermont acute care hospitals within inpatient, outpatient and emergency department settings.

Hospital-based analyses are useful for understanding overall hospital utilization, and have applications for health system planning, cost containment, and resource development. Vermont hospitals near Vermont's borders may provide care to people in neighboring, non-Vermont towns. Hospital-based analyses include all people served by each hospital, regardless of their state of residency. This report focuses only on data from Vermont hospitals, and includes all patients who received services regardless of whether they were Vermont residents or residents of other states.

Analyses by hospital service area (HSA) can be used to compare data for residents of geographic regions of Vermont who were provided services in any Vermont, New Hampshire, New York, or Massachusetts hospital. With some caveats, such population-based HSA analyses can help compare morbidity and practice variations across different regions of Vermont. Because data for Vermont residents using hospitals in all bordering states are not available at the time of production of this report, it is not possible to calculate accurate population-based rates for Vermont residents for this report. ***This report is based only on data from Vermont hospitals: analyses by hospital service area are not available.***

Individuals may have multiple records in any or all of the datasets if they had multiple inpatient discharges, outpatient procedures, expanded

outpatient services and/or emergency department visits during the reporting year. Therefore, the number of discharge/visit records likely exceeds the number of individuals who received hospital-based services during the reporting year.

### Sources of Data

All fourteen of Vermont's civilian acute care hospitals, under an agreement with the Vermont Association of Hospitals and Health Systems - Network Services Organization (VAHHS-NSO), supply discharge abstracts directly to VAHHS-NSO in electronic format for processing and consolidation. Under a contract with the Vermont Green Mountain Care Board (GMCB, formerly the Department of Financial Regulation, and prior to that, the Department of Banking, Insurance, Securities and Health Care Administration), VAHHS-NSO provides hospital discharge data to the Vermont Department of Health.

Upon receipt of Vermont hospital discharge data from VAHHS-NSO, the Health Department edits the data and checks for completeness and internal consistency. Results of these analyses are shared with VAHHS-NSO and participating Vermont hospitals as part of an ongoing quality improvement process.

The Veterans Administration hospital in White River Junction submitted data until June 30, 2006. The Brattleboro Retreat in Brattleboro and the Vermont State Hospital are strictly psychiatric hospitals and do not participate in this data collection effort.

## Exclusions

As in any data set of this size, there are a small number of records with incomplete or missing elements. These records must be excluded from particular analyses. The number of missing records is indicated in each table so that all totals can be reconciled.

Throughout the report, to avoid counting hospitalizations for delivery twice, maternal records are included but newborns (MDC 15) are excluded from reports (although newborn charges are included in reports of total charges). This is a standard practice in hospital utilization analysis. However, discharge records for newborns are retained in the Vermont Uniform Hospital Discharge Data Set to support research and analyses that include this population.

## Data Collection in Vermont

Inpatient discharge data have been the core of the Vermont hospital utilization reports since 1975. These data have been helpful in hospital planning and have provided a longitudinal view of hospital utilization and the health of Vermonters.

All fourteen of Vermont's civilian acute care hospitals participate in the Emergency Department reporting system. ED usage is of particular interest in a rural state that may have limited sites and hours available for provision of primary and urgent care in some areas. ED data also provide essential information for injury control studies, since this is often the setting in which accidental and intentional injuries are evaluated and treated. Complete reporting of ED data to the hospital discharge reporting system began in 2003.

All fourteen of Vermont's civilian acute care hospitals submit outpatient data to the hospital discharge reporting system. Reporting of outpatient procedures that occurred in an operating room began in 1989.

In 2006 additional types of hospital-based outpatient services were collected in the hospital discharge dataset, such as diagnostic tests and therapeutic services. This report continues to explore these expanded outpatient data and includes information on revenue codes and primary cost centers.

## Hospital Settings

**Inpatient Discharges.** The inpatient dataset includes all discharges that are billed as an inpatient stay, regardless of admission source. Maternal records are included, but newborns (MDC 15) are excluded from reports to avoid duplicate counts (although newborn charges are included in reports of total charges). Several tables provide comparisons of inpatient discharges that originated in the ED with those that did not.

**Emergency Department (ED) Visits.** ED data are defined as records that originated in the ED, as indicated by an associated revenue code of 450-459, Emergency Room. ED visits are reported in terms of admission or non-admission to the inpatient setting.

**Outpatient Procedures.** The outpatient procedure data include records with a primary CPT code in CCS high level groups 1 through 15 that did not originate in the ED. Outpatient procedures may have been performed in an operating room or other hospital outpatient setting.

**Observation Beds.** The hospital discharge data also include observation bed records, as indicated by an associated revenue code of 760 or 762, Treatment/Observation Room. These are records recognized by third-party payers for beds occupied by a person in an observation status. Most observation bed records can be found in the outpatient setting with an associated ED revenue code and/or a primary CPT code in CCS high level groups 1 through 15. There are a few inpatient discharges from Vermont hospitals with an associated observation bed revenue code, and some observation bed records can be found in the outpatient data with no associated ED revenue code or primary CPT code.

**Expanded Outpatient Services.** The expanded outpatient data include records that do not have an associated ED or observation bed revenue code, and do not have a primary CPT code in CCS high level groups 1 through 15. These data include additional types of hospital-based outpatient services, such as diagnostic tests and therapeutic services that are not classified elsewhere. Collection of the expanded outpatient data began with the 2006 reporting year.

**Comparison across Hospital Settings.** Since reporting year 2003, data have been available across three hospital settings: inpatient discharges, outpatient procedures and services, and emergency department (ED) visits. Comparison of utilization across these three settings offers a comprehensive view of patterns in the health care delivery system. The distribution of discharges among the three settings by hospital offers an interesting snapshot of local patterns of use. In most of these tables, the discharge records are sorted by diagnostic or procedure groups for comparison across the settings (see explanation of Clinical Classifications Software below).

Records are presented at the visit level, one record per visit, except for Table O-11, where expanded outpatient visits with multiple revenue groups are reported more than once.

## **Classification of Diagnoses and Procedures**

No changes in coding systems occurred in 2017.

In 2014 and 2015, hospitals reported diagnoses and procedures using multiple coding systems for inpatients, ED visits and outpatients. Due to changes in Vermont's requirements, as of July 1, 2014, reporting of **outpatient procedures** changed from the International Classification of Disease codes (9th Revision, Clinical Modification: ICD-9-CM) to the Current Procedural Terminology (CPT) and Health Care Procedure Coding System (HCPCS) coding system. In addition, as of October 1,

2015, federal mandates required that reporting of **all diagnoses and inpatient procedures** change from the ICD-9-CM to the ICD-10-CM/PCS coding system.

**Inpatient Diagnosis Groupings.** Inpatient discharges are often grouped by diagnoses using Medicare Severity Diagnosis Related Groups (MS-DRGs) and Major Diagnostic Categories (MDCs). MS-DRG groupings describe conditions and procedures related to similar body systems or etiologies and are further grouped into 25 MDCs. However, these groupings are not used for outpatient or ED records. For this report, to facilitate comparisons across hospital settings, primary diagnoses for all inpatients, outpatients, and ED visits are grouped into the same clinically meaningful categories using Clinical Classifications Software (CCS).

**Outpatient ICD-9-CM and CPT Primary Procedures.** Prior to July 1, 2014, outpatient procedures were reported using the ICD-9-CM coding system; these codes were included as appropriate on each individual discharge record with a primary procedure code determined by the reporting hospital. As of July 1, 2014, outpatient procedures are reported using the HCPCS/CPT coding system; these codes are included on each of one-to-many revenue records per discharge, and there is no determination of primary CPT code by the reporting hospital. Therefore, a primary CPT code is calculated for each outpatient discharge using an algorithm that includes relative value units, charges, and whether the CPT code is for an ambulatory surgical procedure. CPT codes reported prior to July 1, 2014 may be incomplete, as may be ICD-9-CM procedure codes reported on or after that date.

**Clinical Classifications Software (CCS).** Clinical Classifications Software (CCS) is a tool developed at the Agency for Healthcare Research and Quality (AHRQ) and available to the public at the website: <http://www.hcup-us.ahrq.gov/toolssoftware/ccs/ccs.jsp>. CCS collapses ICD-9-CM and ICD-10-CM principal diagnosis codes into the same 260 mutually exclusive, meaningful, single-level categories. These single-level CCS categories are then collapsed into high-level groups, broad categories based on body systems or condition. Similarly, CCS collapses

ICD-9-CM, ICD-10-PCS and HCPCS/CPT procedure codes into the same 244 mutually exclusive, meaningful, single-level procedure categories that are then collapsed into high-level groups based on body systems or condition. CCS diagnosis and procedure groups are used in these tables to compare patient records within and across health care settings, and across time.

The changes in required reporting have resulted in some discontinuities across 2014 and 2015 in several specific single- and high-level CCS procedure groupings: these discontinuities may be due in part to differences between the various coding systems. See Appendix B for further information about these changes in reporting. Appendices C

through I provide more details about inpatient and outpatient CCS diagnosis and procedure groupings in 2013 through 2017 by discharge quarter.

**Revenue Code Primary Cost Center Groups.** Primary Cost Centers (PCCR) are used to group revenue codes into broader categories of services. About 25 of the most frequent PCCR categories are reported individually in this report, of over sixty possible categories. If a visit includes multiple revenue codes that map to the same PCCR category, or to multiple PCCR categories, each distinct category is counted once for that visit.

## **Highlights**

## Highlights of Charges and In-migration to Vermont Hospitals

### Total Charges and Number of Discharges

- **Total charges for Vermont resident inpatient discharges from Vermont hospitals** increased by 3.4% from 2016 to 2017. Charges for non-resident inpatient discharges increased by 8.1%. The *number* of inpatient discharges for Vermont residents in 2017 decreased by 0.3% over 2016, and the number of non-resident inpatient discharges increased by 4.4%.
- **Total charges for Vermont residents with ED visits to Vermont hospitals** increased by 2.5% from 2016 to 2017, a smaller increase than that for non-residents (3.6%). Total charges have fluctuated in recent years, with the smallest increases occurring from 2012 to 2013 (5.2% and 8.8% respectively), and the largest from 2013 to 2014 (10.8% and 10.9% respectively). The *number* of ED visits for both Vermont residents and non-residents has changed very little from 2016 to 2017 (-2.1% and -0.9% respectively).
- **Total charges for Vermont residents with outpatient procedures in CCS high-level procedure groups 1 through 15 at Vermont hospitals** increased 0.6% from 2016 to 2017 compared to the increase of 5.2% in total charges for non-residents. The increase for Vermont resident charges is lower than the change from 2015 to 2016 (3.6%), and the increase in total charges for non-residents is higher than the increase from 2015 to 2016 (3.7%). The *number* of outpatient procedures for Vermont residents and non-residents changed slightly from 2016 to 2017 (-1.6% and 1.9% respectively). The increase in number of outpatient procedures compared to 2013 is due in large part to changes in requirements for Vermont hospitals' coding of outpatient procedures from ICD-9-CM codes to CPT codes as of July 1, 2014. See the User's Guide for detailed information about this change.

### In-migration

- Most in-migration to Vermont hospitals in 2017 continued to be by New York residents for inpatient care, ED visits, and outpatient procedures in range. As in recent years, New York residents accounted for a much smaller percent of all ED visits than of either inpatient discharges or outpatient procedures (3.9% of ED visits, compared to 9.4% of inpatient discharges and 7.3% of outpatient procedures in range).
- In 2017, New York residents accounted for a higher percent of total charges than of total discharges in all three settings (4.5% of ED charges, 14.7% of inpatient charges and 8.8% of outpatient charges), as in recent years.

Note: Reporting is limited to Vermont hospitals until the 2017 data are available for Vermont residents served in New Hampshire, Massachusetts and New York hospitals. The timeliness of the annual data exchange between Vermont and New Hampshire has been seriously impacted by major changes in New Hampshire's data collection and processing technologies. Data from New Hampshire have not been available since 2015, and Massachusetts data have not been available since the 2013 discharge year.

## 2017 Vermont Hospitals Summary of Patients' State of Residence by Hospital Setting

### Percent of Total Discharges

### Percent of Total Charges

Numbers of discharges exclude newborns. Total charges include charges for newborns.

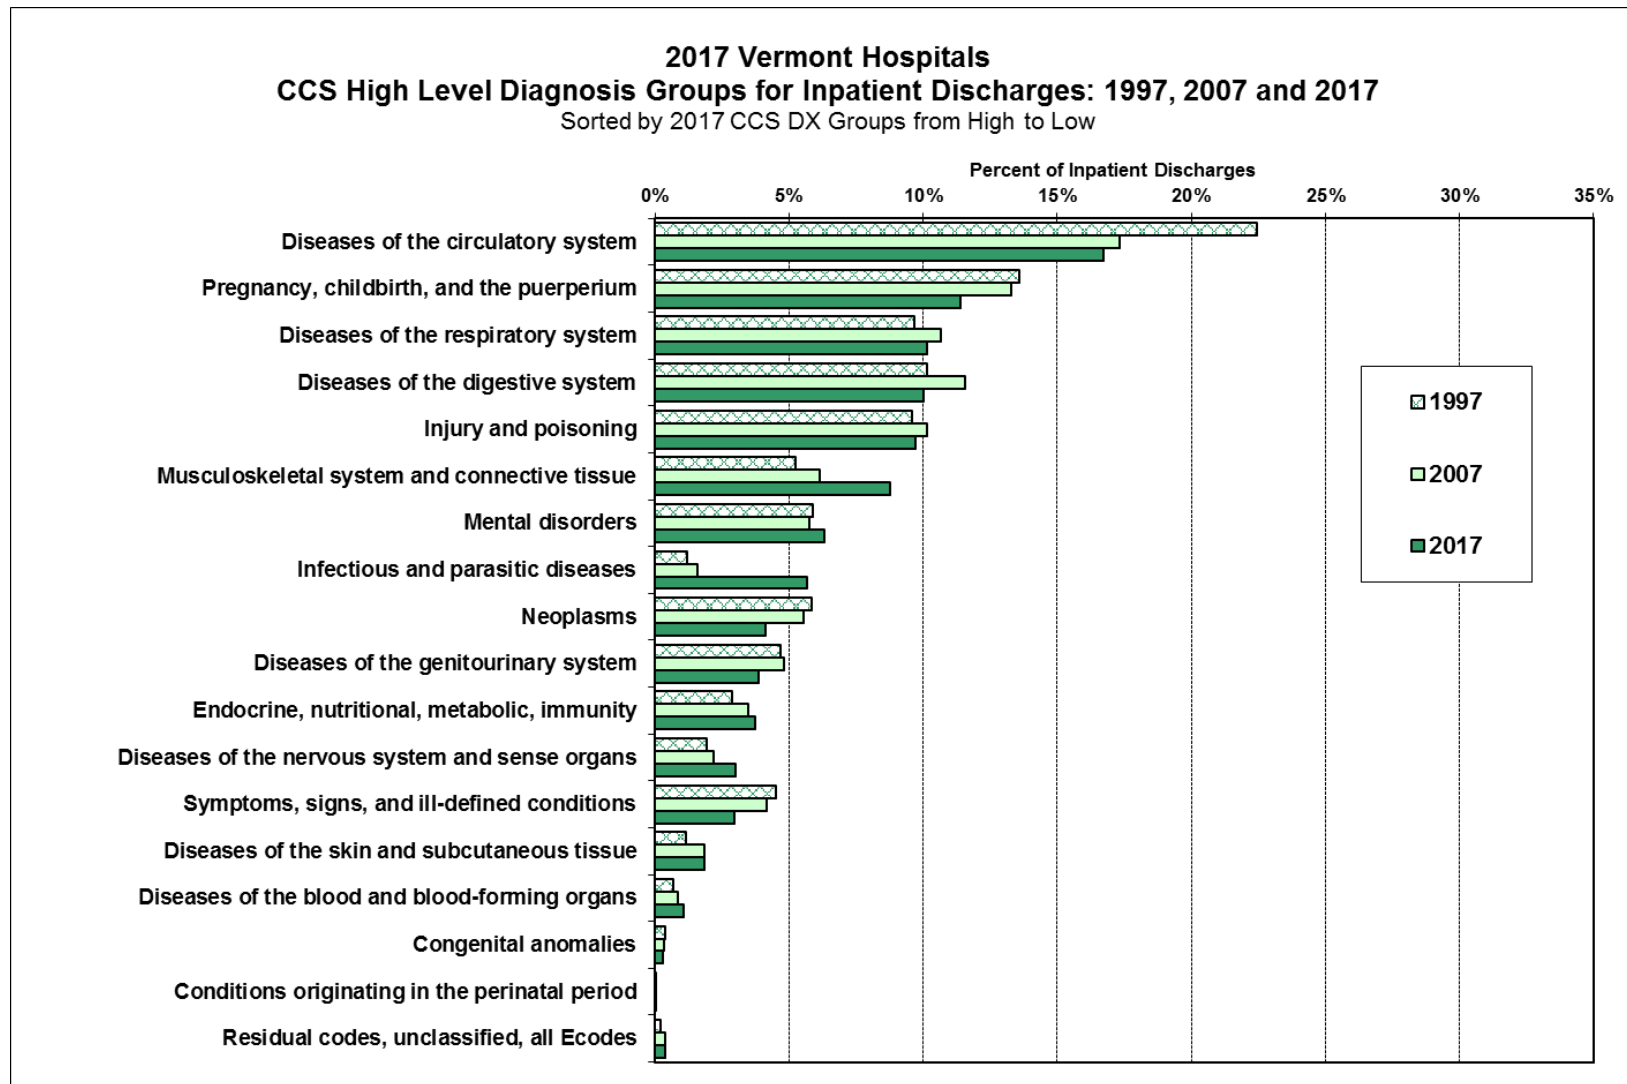

## Highlights of Inpatient Discharges from Vermont Hospitals

- **In 2017, there were 48,166 inpatient discharges from Vermont hospitals**, including maternal records but excluding newborns. Of these, 86.5% were Vermont residents, and 13.5% were residents of New Hampshire, Massachusetts, New York or elsewhere.
- **The number of inpatient discharges from Vermont hospitals has declined** 2.0% from 1997, and increased 0.2% from 2007, including both Vermont residents and non-residents. The average length of stay for these discharges changed very little overall, from 4.8 days per discharge in 1997 to 4.6 in 2007, and to 4.9 in 2017.
- **Similar to findings in recent years**, more than half of the total inpatient discharges from Vermont hospitals in 2017 originated in the Emergency Department (61.2%).
- **The University of Vermont Medical Center** continued to have the highest number of inpatient discharges at 19,769 in 2017 (41.0% of all inpatient discharges, compared to 38.9% in 1997 and 41.1% in 2007). Rutland followed with 6,640 discharges (13.8%). Grace Cottage Hospital and Mt. Ascutney Hospital and Health Center had the lowest total numbers of inpatient discharges (151 and 1,031 respectively).
- **The University of Vermont Medical Center** continued to have the highest total number of patient days at 120,578 in 2017 (51.2% of 235,382 patient days), followed by Rutland Regional Medical Center with 29,673 (12.6%). Grace Cottage Hospital had the lowest total number of patient days (423).
- **In 2017, average length of stay in Vermont hospitals varied** from 2.7 days per discharge at Copley Hospital to 6.1 days per discharge at The University of Vermont Medical Center, not including Mt. Ascutney Hospital and Health Center.
- **The exception** was Mt. Ascutney Hospital and Health Center, where the average length of stay in 2017 was 9.7. The high average length of stay started in 2014, due in large part to updates made to the computer system at VAHHS-NSO which allows inpatient rehabilitation cases to be submitted. These cases tend to have longer lengths of stay.

- In 2017, Medicare continued to be the leading principal payer for inpatient discharges from Vermont hospitals at 51.1% of total discharges, followed by private insurance at 29.0% and Medicaid at 16.5%. These figures are comparable to those in recent years. As in previous years, there was wide variation among hospitals in payer mix.

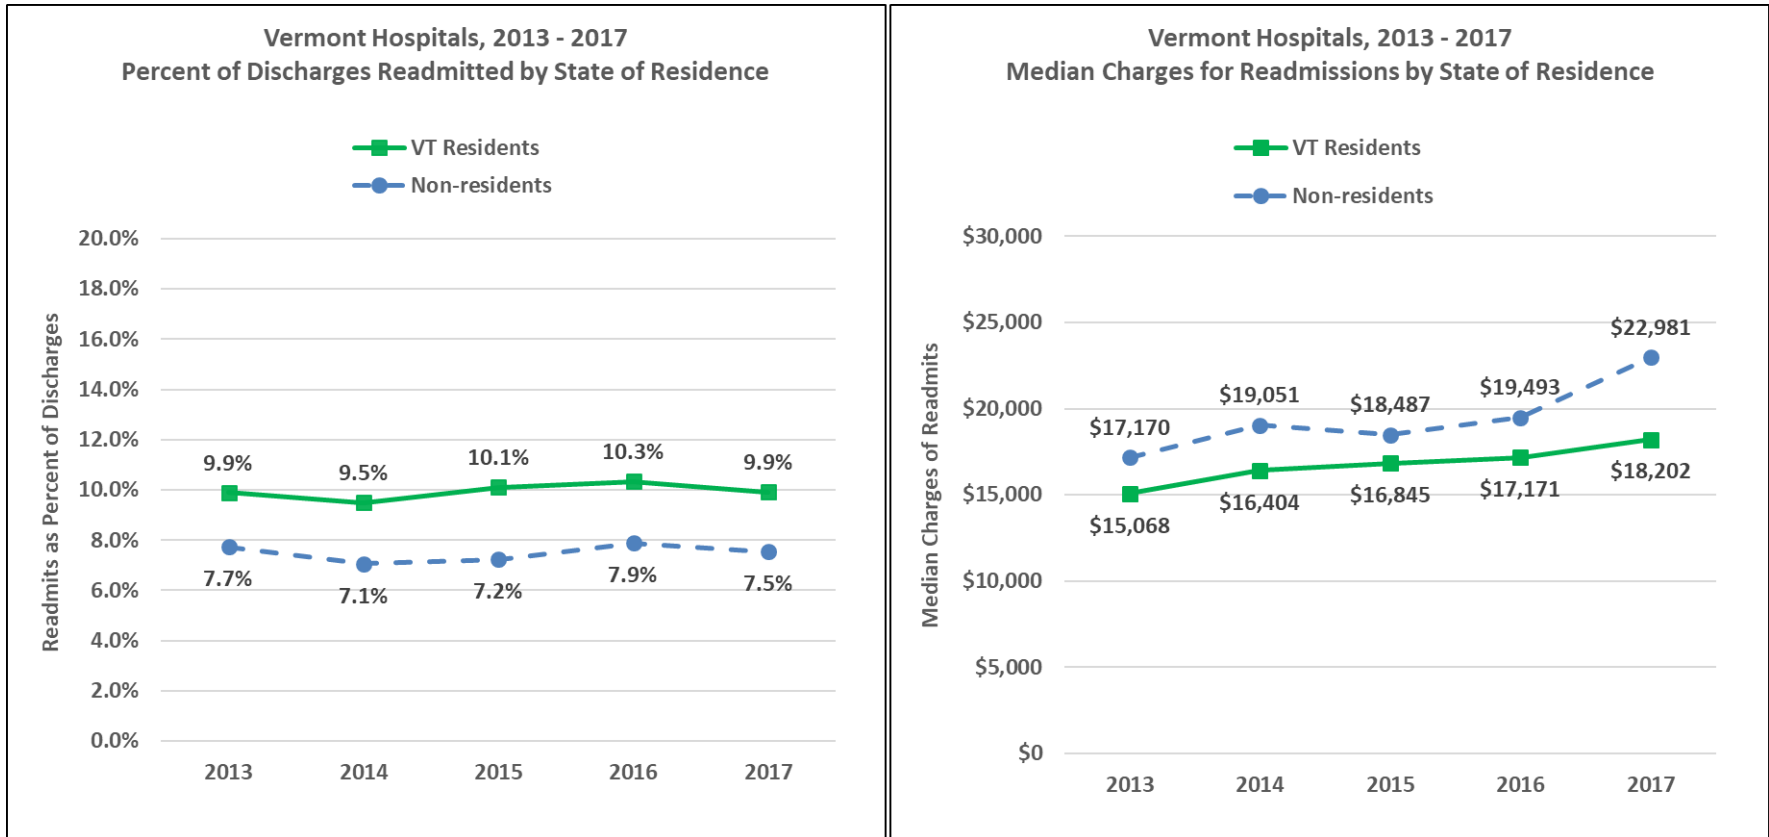

- **The most frequent reasons for hospitalization in 2017** were Diseases of the circulatory system; Pregnancy, childbirth and the puerperium; Diseases of the respiratory system; Diseases of the digestive system; and Injury and poisoning, consistent with recent years. Of note are the continued decreases in percent of hospitalizations with diagnoses for Diseases of the circulatory system, Pregnancy, childbirth and the puerperium, and Symptoms, signs, and ill-defined conditions, and the substantial increases in the percent of diagnoses with Musculoskeletal system and connective tissue, and Infectious and parasitic diseases.

- The percent of inpatients readmitted to the same hospital for any reason within 30 days of discharge** differs by the patient’s state of residence, with Vermont residents readmitted more frequently than out-of-state residents each year from 2013 through 2017. In contrast, out-of-state residents have higher median charges than Vermont residents when readmitted to Vermont hospitals.
 

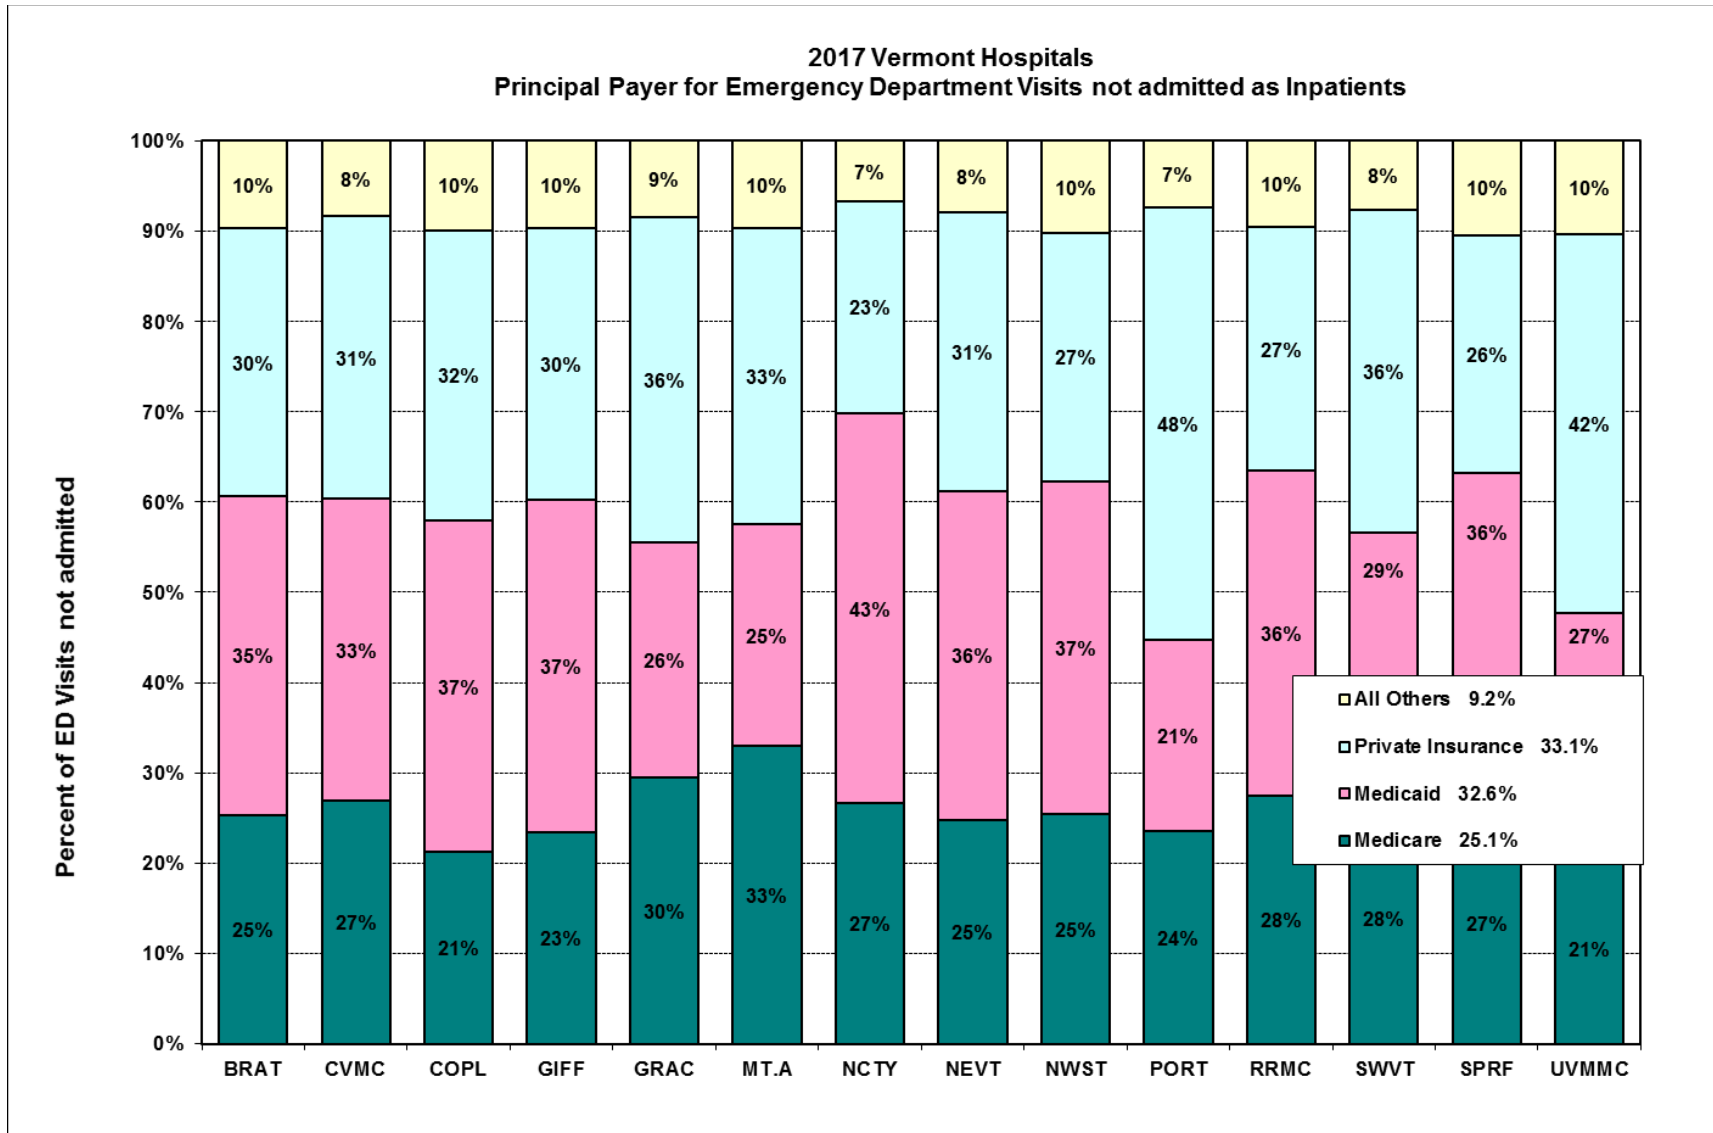

Note: ‘Readmission’ is defined in this report as readmitted to the same hospital for any reason within 30 days of discharge, excluding readmission on the same day as discharge.

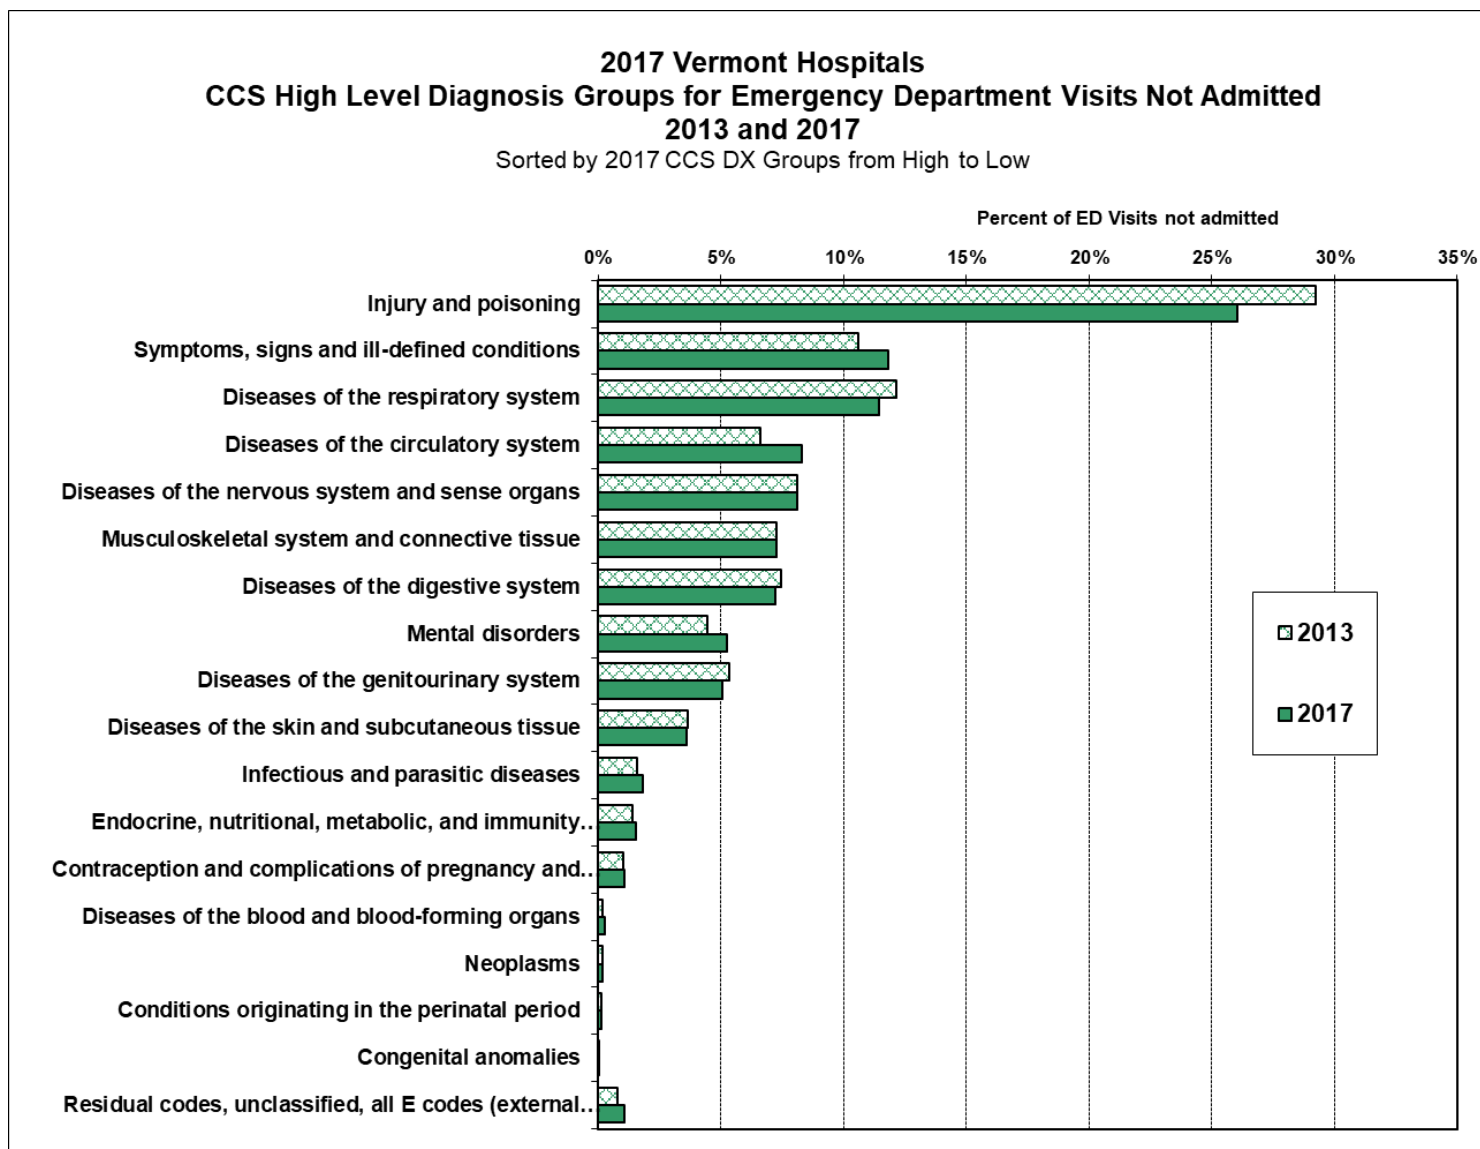

## Highlights of Visits to Vermont Hospital Emergency Departments

- **In 2017, there were a total of 261,214 visits to Vermont hospital Emergency Departments**, including both Vermont residents and non-residents, a small decrease from 2016. Similar to recent years, 88.7% (231,724) of these ED visits were not admitted, while the remaining 11.3% (29,490) of ED visits were admitted and categorized as inpatient discharges.
- **Overall, the number of ED visits decreased** from 2013 to 2017 by 2.3% (-4.5% for ED visits not admitted, and an increase of 18.7% for those admitted as inpatients).
- **In 2017, as in previous years, the percent of ED visits that were admitted as inpatients increased with increasing age.** About 2% of ED visits by children under age 15 were admitted, as were 4.2% of visits by individuals age 15-44, 12.2% of those aged 45-64, 19.6% of those aged 65-69, 22.7% of those aged 70-74, 25.7% of those aged 75-79, and 32.8% of those aged 80 and older.
- **The University of Vermont Medical Center** continued to have the highest percent of visits to the ED in 2017, leading all Vermont hospitals with 21.6% of all ED visits. Of all ED visits to The University of Vermont Medical Center, 17.1% were admitted as inpatients, consistent with previous years.
- **The percent of ED visits that were admitted in 2017** ranged from highs of 17.1% at The University of Vermont Medical Center, 15.3% at Rutland Regional Medical Center, and 13.4% at Central Vermont Medical Center, to a low of 4.1% at both Grace Cottage Hospital and Porter Medical Center.
- **Of all ED visits, those with a primary diagnosis of neoplasms were the most likely to be admitted (62.2%),** followed by those with diseases of the blood and blood-forming organs (42.6%), those with congenital anomalies (39.1%), and those with infectious and parasitic diseases (37.0%). Least likely to be admitted were ED visits for Conditions originating in the perinatal period (1.1%) and for Symptoms, signs and ill-defined conditions (2.2%).

In 2017, Private Insurance was the leading principal payer for ED visits not admitted at 33.1% of these visits, followed by Medicaid at 32.6% and Medicare at 25.1%. These figures are comparable to those in recent years. As in previous years, there was wide variation among hospitals in payer mix.

- **The most frequent reasons for ED visits not admitted in 2017** were Injury and poisoning; Symptoms, signs and ill-defined conditions; Diseases of the respiratory system; Diseases of the circulatory system; Diseases of the nervous system and sense organs; and Musculoskeletal system and connective tissue, consistent with recent years. Of note is the substantial decrease in percent of ED visits not admitted for Injury and poisoning, and increases in Symptoms, signs and ill-defined conditions, Diseases of the circulatory system and Mental disorders.

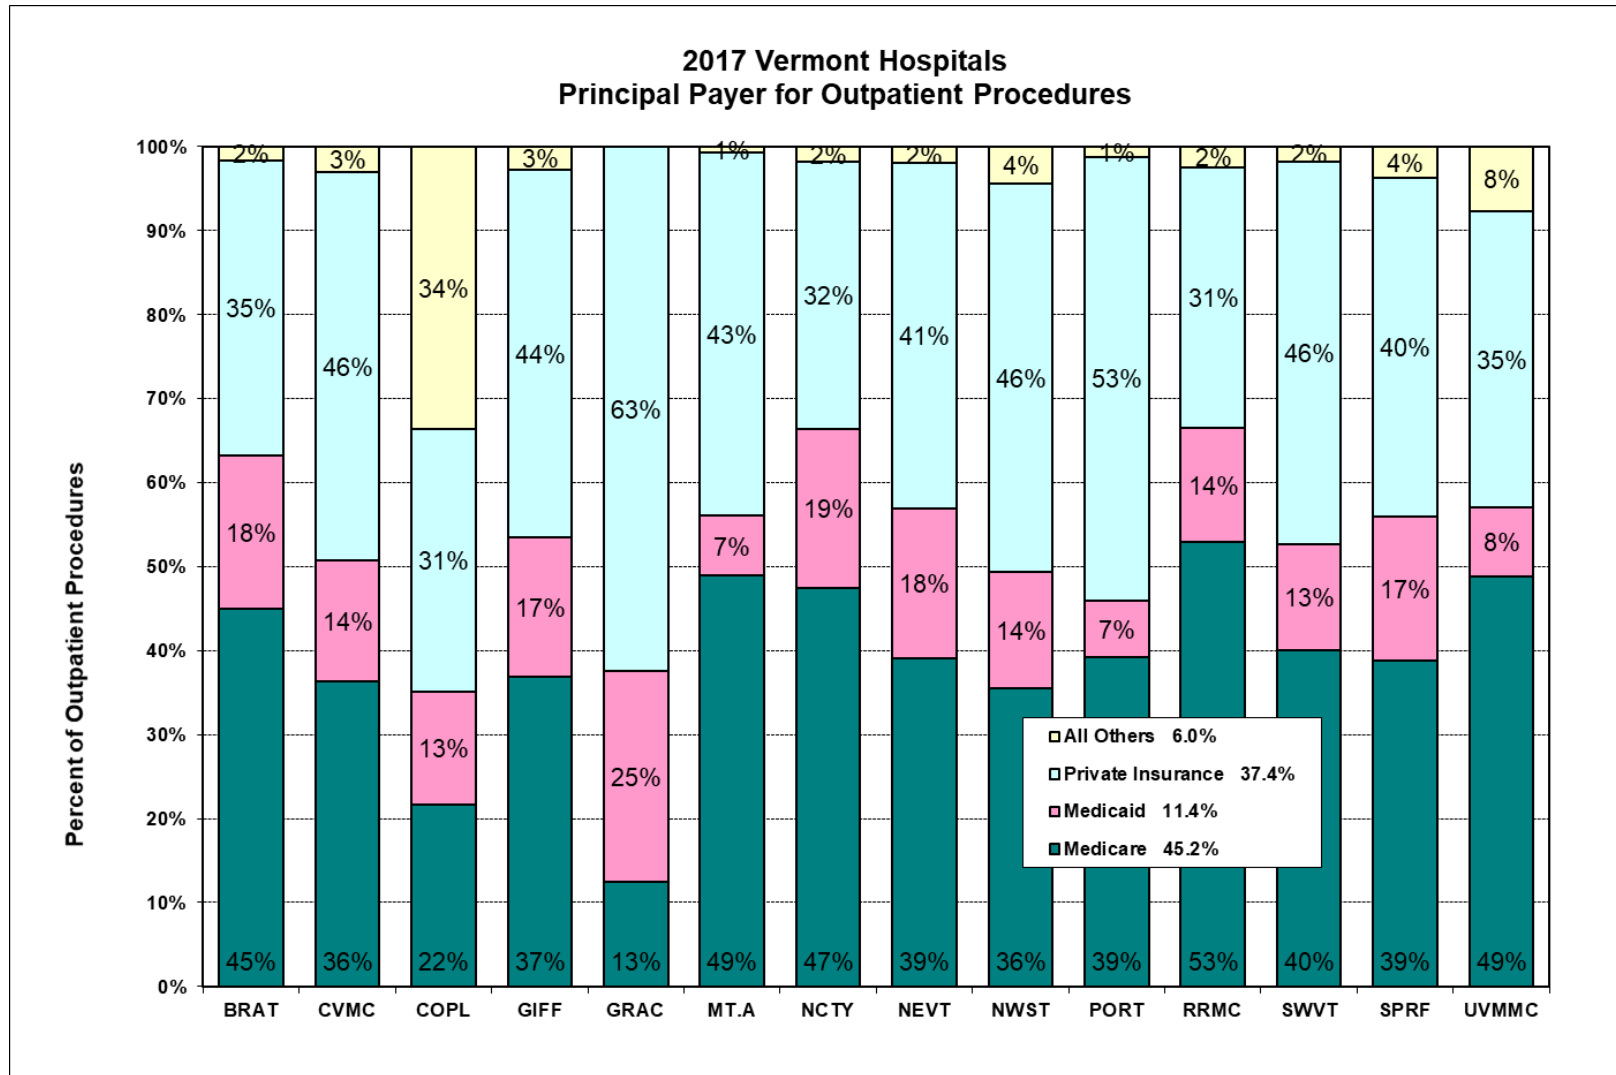

## Highlights of Outpatient Procedures and Services in Vermont Hospitals

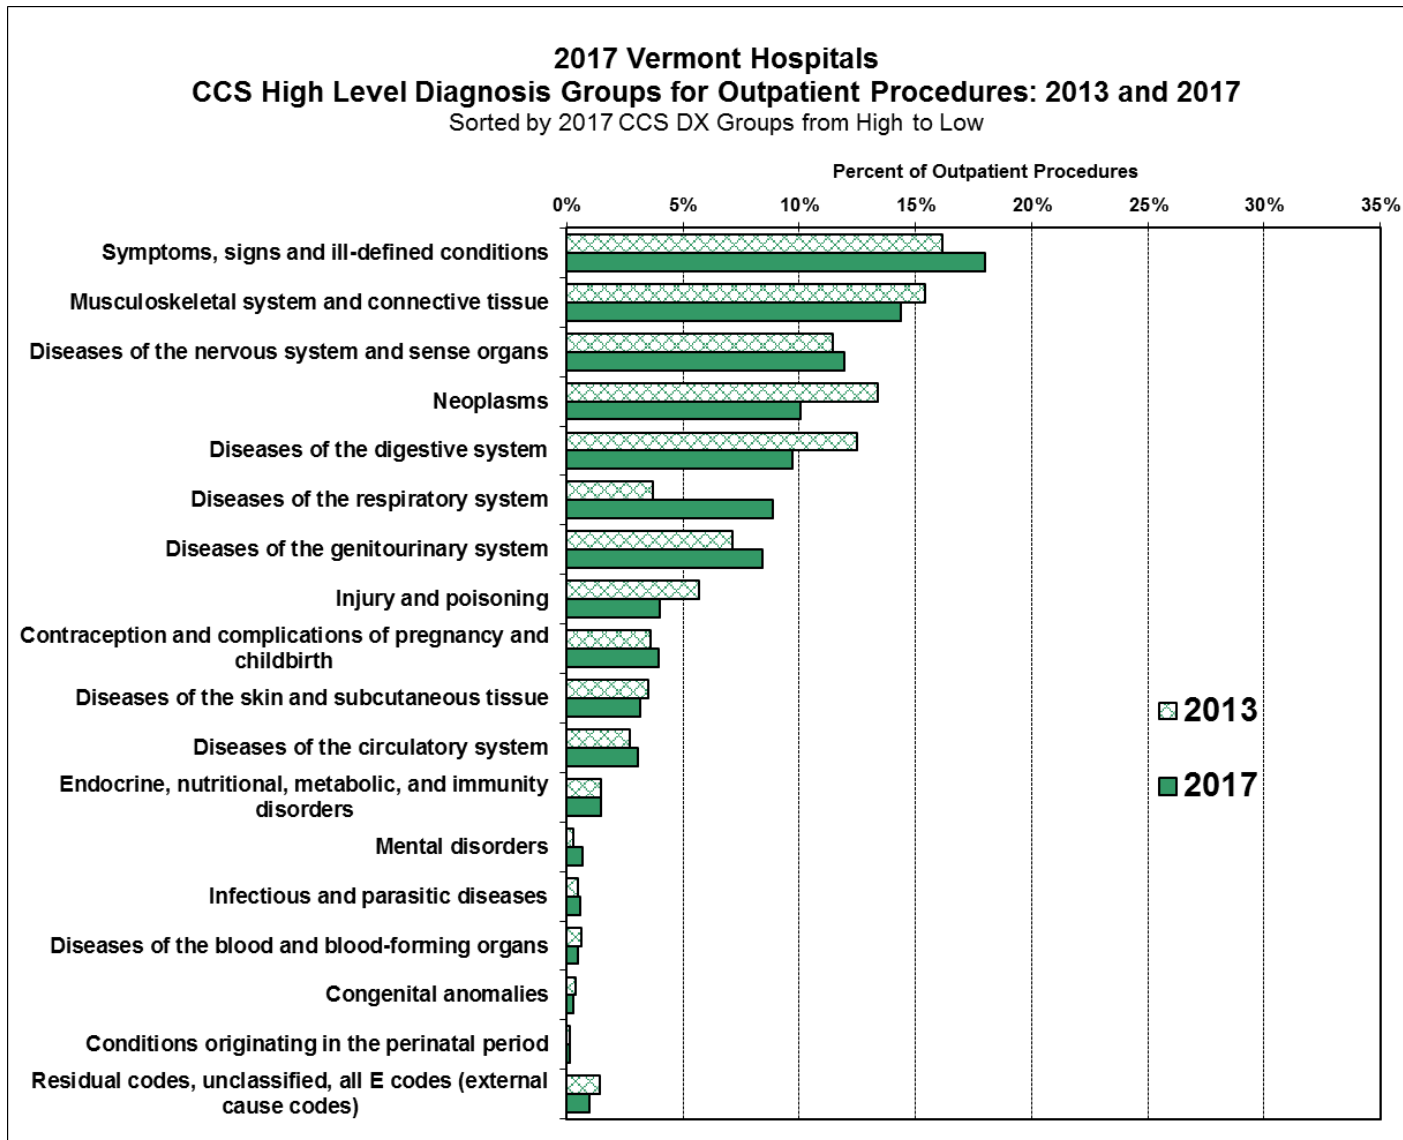

- **In 2017, there were 131,034 visits to Vermont hospitals for outpatient procedures** with a high-level procedure code in CCS procedure groups 1 through 15, representing both Vermont residents and non-residents. These outpatient visits did not originate in the Emergency Department. Grace Cottage Hospital had eight visits for outpatient procedures in this range of CCS procedure groups.
- **The number of outpatient procedures in Vermont hospitals decreased slightly** by 1.3% from 2016 after a 3.3% increase from 2015 to 2016. The continued substantial increase in number from 2013 is due in part to the required change in Vermont hospitals' coding of outpatient procedures from the ICD-9-CM system to the CPT system in 2014. See the User's Guide for more detailed information.
- **Overall, non-residents accounted for 10.0% of all visits to Vermont hospitals for outpatient procedures** in 2017. As in previous years, there was wide variation in the percent of non-residents at Vermont hospitals, with non-residents comprising 35.9% of Mt. Ascutney Hospital and Health Center's outpatient visits and 26.2% of Southwestern Vermont Medical Center's outpatient visits, compared to 1% or less of outpatient visits to Central Vermont Medical Center, Copley Hospital, North Country Hospital and Northwestern Medical Center.
- **Medicare was the primary payer** for 45.2% of all visits to Vermont hospitals for outpatient procedures in 2017. Rutland Regional Medical Center reported 52.9 % of outpatient visits with Medicare as the primary payer, while Copley reported the lowest percent with 21.7%. Consistent with recent years, there was substantial variation by CCS diagnosis group, with Diseases of the skin and subcutaneous tissue (74.1%), Infectious and parasitic diseases (69.7%), and Diseases of the nervous system and sense organs (66.2%) having the highest percent of visits with Medicare as the primary payer.
- **North Country Hospital and Brattleboro Memorial Hospital reported the highest percent of outpatient procedures with Medicaid as primary payer** (19.0% and 18.3% respectively), while Porter Medical Center, Mt. Ascutney Hospital and Health Center, and University of Vermont Medical Center reported the lowest percents with Medicaid as primary payer (6.8%, 7.2%, and 8.2% respectively).
- **The services most frequently provided in expanded outpatient visits** in 2017 were charged under the primary cost center for Laboratory-Clinical services in all 14 Vermont hospitals, as in previous years. The frequency of these services far exceeded the next most frequent services, which were charged under the primary cost centers for Clinic, Radiology-Diagnostic, Drugs Charged to Patients, Mammography, Chemistry, Ultrasound, and Physical Therapy.
- **The average charge for observation beds in Vermont hospitals** was the highest average charge in recent year, and 34.9% higher in 2017 than in 2013. The number of these beds has fluctuated somewhat over time but changed much less since 2013 (9.7%). The University of Vermont Medical Center had 35.1% of all observation beds in 2017, followed by Rutland Regional Medical Center (9.9%), and Brattleboro Memorial Hospital (8.1%). The same hospitals consistently have the highest percents of observation beds, but the rank order may change from one year to another.

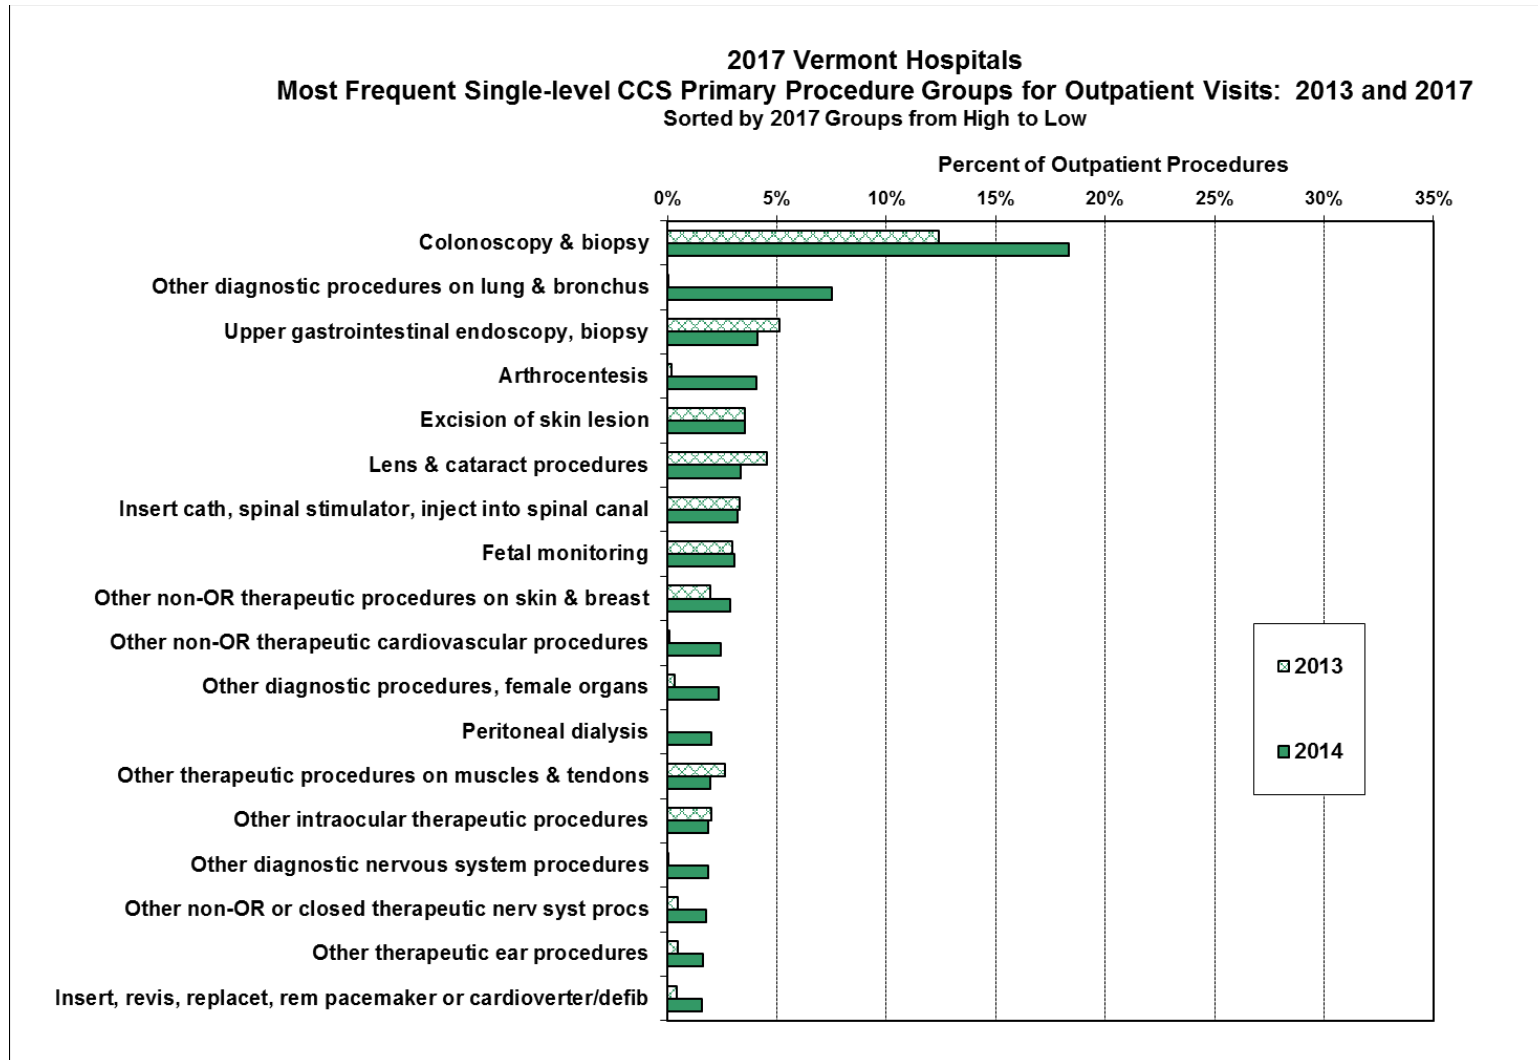

- **In 2017, Medicare was the leading principal payer** for 45.2% of outpatient procedures in range, followed by Private Insurance at 37.4% and Medicaid at 11.4%. These figures are comparable to those in recent years. As in previous years, there was wide variation among hospitals in payer mix. (Grace Cottage Hospital had only eight outpatients.)

- The most frequent reasons for outpatient procedures in range** in 2017 were Symptoms, signs and ill-defined conditions; Musculoskeletal system and connective tissue; Diseases of the nervous system and sense organs; Neoplasms; and Diseases of the digestive system. The most frequent reasons in 2017 are consistent with those in recent years, although their rank order may differ a little. Of note are increases in the percent of outpatients diagnosed with Symptoms, signs and ill-defined conditions, Diseases of the respiratory system, and Diseases of the genitourinary system, and decreases in the percent of outpatients diagnosed with Neoplasms and Diseases of the digestive system, compared to 2013.

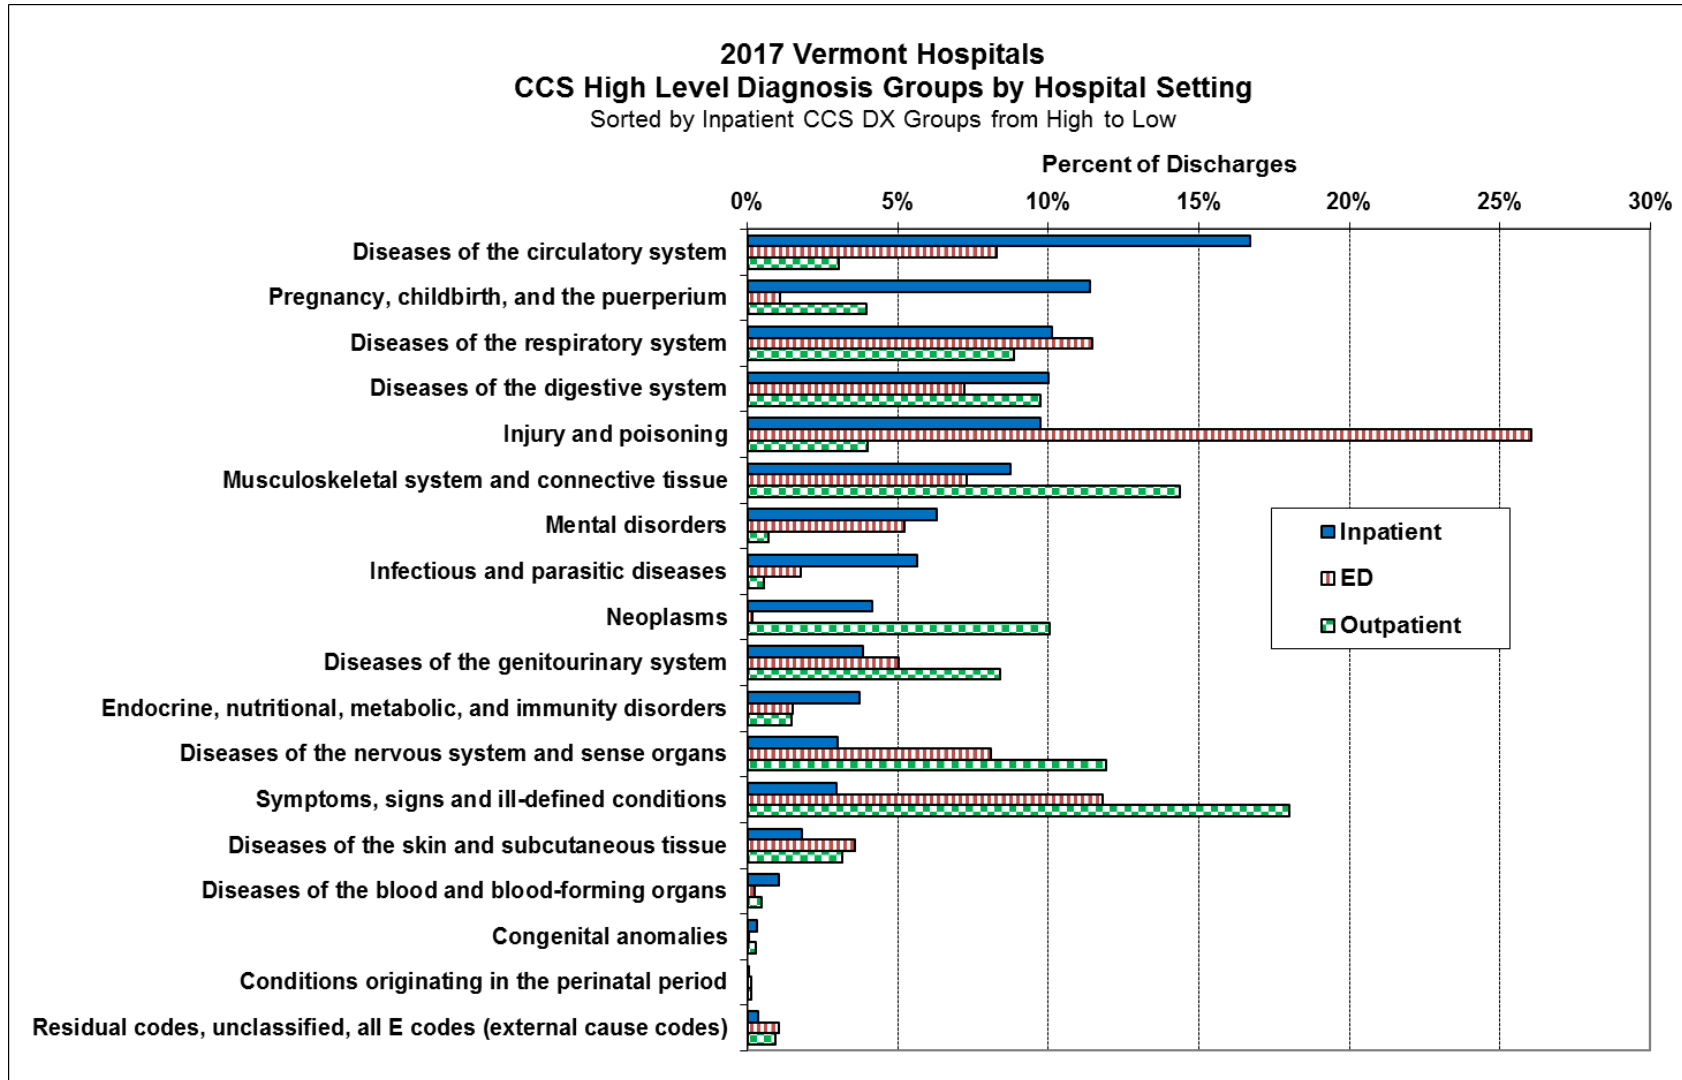

- **The leading single-level group of outpatient procedures in high-level CCS procedure groups 1 through 15 in both 2013 and 2017 was Colonoscopy & biopsy.** Following this procedure group in 2017 were Other diagnostic procedures on lung & bronchus, and Upper gastrointestinal endoscopy, biopsy. These most frequent procedure groups in 2017 are inconsistent with those in recent years, due in large part to Vermont’s change in the coding of outpatient procedures from the ICD-9-CM system to the CPT system in 2014.

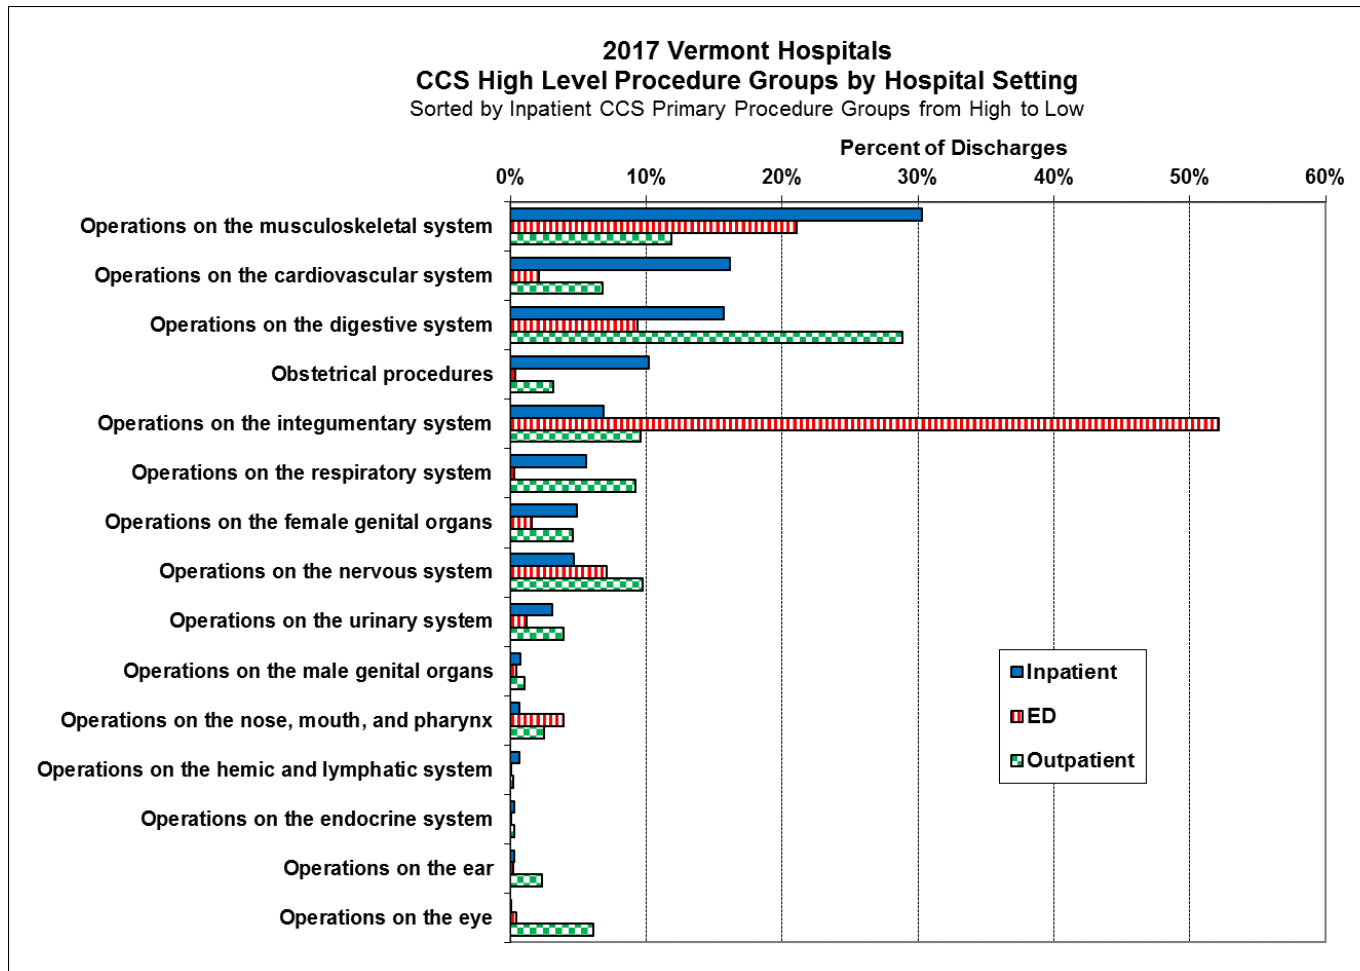

## Highlights of Comparisons across Vermont Hospital Settings

- The most frequent CCS high level diagnosis groups differed across Vermont hospital settings in 2017.** The most frequent diagnosis group (based on primary diagnosis) for inpatients was Diseases of the circulatory system. The most frequent diagnosis group for ED visits was Injury and poisoning, and for outpatients, Symptoms, signs, and ill-defined conditions. The frequencies of these CCS high level diagnosis groups have been consistent in recent years.

- The most frequent CCS high level procedure groups in range 1 through 15 differed across hospital settings in 2017.** The most frequent procedure group for inpatients was Operations on the musculoskeletal system, followed by Operations on the cardiovascular system. The most frequent procedure group for ED visits was Operations on the integumentary system, followed by Operations on the musculoskeletal system, and for outpatients, Operations on the digestive system followed by Operations on the musculoskeletal system. The frequencies of these CCS high level procedure groups have been consistent in recent years.

Only Expanded Outpatient Records are included in this table.

Expanded Outpatient records are outpatient records with no primary CPT code in CCS high-level groups 1 through 15, and no associated ED or ObsBed revenue record.

The Primary Cost Centers reported here are just a partial list of all possible cost centers. See Appendix J for all cost centers and associated revenue codes.

Visits with multiple revenue codes for services provided within a Primary Cost Center are counted only once in that cost center per visit. Visits may have more than one Primary Cost Center and can represent more than one unit of service. Therefore, the totals shown in this table do not add up to the total number of visits to or services provided by the hospitals.

Diagnostic Mammography = revenue code 401 and Screening Mammography = revenue code 403

EKG/ECG = revenue code 730, 732 or 739 and EEG = revenue code 740 or 749

PET Scan = revenue code 404

Column headers denote hospitals: key to the hospital abbreviations can be found in Appendix K.

Observation Bed records are defined by having an associated revenue code of 760 or 762.

Emergency Department records are defined as having an associated revenue code between 450 and 459.

Numbers of inpatient discharges exclude newborns (MDC 15), but average charges include newborns.

Procedure in Range records include all outpatient visits that have no associated revenue code of 45x and that have a primary CPT code in CCS high-level groups 1 through 15.

Charge data should be used with caution. See discussion in Appendix A for details.

Records with missing charges are included in the number of procedures reported but excluded from the average charges calculation.

Outpatient procedures are outpatient visits that did not originate in the ED, and that have a primary CPT code in CCS high-level groups 1 through 15.

Expanded Outpatient records include all outpatient records with no primary CPT code in CCS high-level groups 1 through 15, and no associated ED or ObsBed revenue record.

Charge data should be used with caution. See discussion in Appendix A for details.

### Additional Definitions

**Average length of stay:** Average length of stay is the total patient days divided by the number of discharges in a selected category. It is a rough measure of the amount of care provided during a typical hospital stay.

**Charges:** Charges in this report are defined as hospital "facility" charges that are calculated by subtracting professional fees and patient convenience items charges from the total charge. However, facility charge data are not always reported according to the strict definition and some hospitals may have included salaried and contracted physician fees in their facility charges.

Comparative analyses of hospital charges must take into account the limitations of charge data. The payments that hospitals receive for an episode of care rarely equal what is charged. All patients, or insurance plans, do not pay the same amount for similar treatments, supplies and services, even though they may be billed the same amount. Private insurers generally negotiate separately with hospitals to set reimbursement rates. The federal and state governments set Medicare and Medicaid reimbursement rates independently. Variations in charges and reimbursement may be designed so services are cross-subsidized.

Charges for hospital admissions with the same principal procedure cannot be expected to be identical, not only because hospitals differ in their assignment of charges, but because patients differ in the severity of their conditions. In general, charges for inpatient procedures tend to be higher than comparable procedures performed in an outpatient setting. In many cases, those treated in an inpatient setting have complicating conditions or other health risks that add to the cost of their care and make them poor candidates for outpatient services.

Throughout this report, to avoid counting hospitalizations for delivery twice, the maternal record is included, but the newborn record is not. However, charges on the newborn record are included in summary calculations of charges.

**Clinical Classifications Software (CCS) Grouper:** CCS was developed at the Agency for Healthcare Research and Quality (AHRQ). CCS groups both ICD-9-CM and ICD-10-CM principal diagnosis codes into the same meaningful categories. CCS aggregates diagnoses of illnesses and conditions into more than 260 single-level diagnosis categories. CCS further collapses these single-level diagnosis groups into high-level categories, broad groups based on body systems or condition categories.

Similarly, CCS provides software versions for grouping ICD-9-CM procedure codes, ICD-10-PCS procedure codes, and HCPCS/CPT codes into the same single- and high-level procedure categories. These versions and other software tools are available at [https://www.hcup-us.ahrq.gov/tools\\_software.jsp](https://www.hcup-us.ahrq.gov/tools_software.jsp)

**Diagnosis:** The condition, determined after study, which occasioned the patient's admission to the hospital. The accuracy or reliability of the diagnosis depends on several factors including the physician's understanding of the problem and the recorder's ability to fit this to established coding conventions. For those cases with multiple problems, the primary diagnosis may not be the reason for surgery or cause of death.

**Discharge:** The equivalent of a hospital admission, except that for a specified time period, only those cases discharged are counted. A count of discharges measures how often care is sought. The same individual will be counted as more than one discharge if hospitalized

more than once during the time studied. Note that discharges do not necessarily reflect disease incidence or prevalence, just the fact of utilization of the hospital resource. Maternal records are included, but newborn records are excluded from the inpatient tables, to avoid duplicate counts. However, newborn records are retained in the Vermont Uniform Hospital Discharge Dataset and charges on the newborn record are included in summary calculations of charges.

**Emergency Department (ED) Dataset:** Consists of all records with an associated revenue code of 45x (Emergency Room).

**Expanded Outpatient Dataset:** Consists of all outpatient records that do not have a primary CPT code in CCS CPT high level procedure groups 1 through 15, or an associated ED (45x) or Observation Bed (760 or 762) revenue code. Dataset includes all other diagnostic and therapeutic services such as laboratory and radiological services.

**Inpatient Dataset:** Consists of discharge records that were billed as an inpatient stay, including those with an associated ED revenue code. Maternal records are included in counts, but newborns are excluded to avoid duplicate counts. However, newborn records are retained in the Vermont Uniform Hospital Discharge Dataset and charges on the newborn record are included in summary calculations of charges.

**Observation Bed:** Outpatient records with an associated revenue code of 760 or 762. A status recognized by third-party payers - e.g. Medicare, health insurance companies and others, in which a patient is admitted to the hospital for a period of 23 hours and 59 minutes or more, depending on the 3rd party, with either a specific 'rule/out' diagnostic consideration - e.g., appendicitis, angina, pneumonia, or

MI; observation may also refer to a known patient status, in which a previously diagnosed condition is managed under observation - e.g., dehydration, anemia, etc.; a popular term for a bed occupied by a person in an outpatient observation status. (McGraw-Hill Concise Dictionary of Modern Medicine. © 2002 by The McGraw-Hill Companies, Inc.)

**Outpatient Procedures Dataset:** Consists of outpatient records with a primary CPT code in CCS CPT high level procedure groups 1 through 15 that was performed in an operating room, ambulatory surgery area, or other outpatient setting.

**Patient day:** Defined as a stay in a hospital for all or part of a day. Patient days are one way of measuring the amount of care provided.

**Population-based Rate:** The rate of a population's use of hospital services. Because data for Vermont residents using hospitals in bordering states are not available at the time of production of this report, it is not possible to calculate accurate population-based rates for Vermont residents for this report.

**Primary Cost Center:** The Centers for Medicare and Medicaid Services (CMS) developed a mapping tool to map revenue charges on a claim to a cost center. The crosswalk is available at the website: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Annual-Policy-Files-Items/CMS1253695.html?DLPage=1&DLSort=0&DLSortDir=ascending>.

**Principal Payer:** The anticipated principal source of payment of the patient's hospital bill recorded by the hospital on each discharge record.

## APPENDIX B

### Changes in Reporting of Diagnoses and Procedures

**Two major changes were made in the reporting of diagnoses and procedures.** The first change took place on July 1, 2014: Vermont hospitals were required to report outpatient procedures using HCPCS/CPT codes instead of ICD-9-CM procedure codes. The second change took place on October 1, 2015: by federal mandate, all diagnosis codes and inpatient procedure codes were required to be reported using the ICD-10-CM/PCS coding system instead of the ICD-9-CM system.

#### July 1, 2014

##### **Change in Vermont Hospitals' Reporting of Outpatient Procedures.**

As of July 1, 2014, significant changes were made in the requirements for Vermont hospitals' reporting of all outpatient procedures and services. Prior to that date, outpatient procedures were reported using the ICD-9-CM coding system: these codes were included as appropriate on each individual discharge record with a primary procedure code determined by the reporting hospital. As of July 1, 2014, Vermont hospitals are required to report outpatient procedures using the HCPCS/CPT coding system: these codes are included on each of one-to-many revenue records per visit, and there is no determination by the reporting hospital of which CPT code is considered to be primary. Therefore, a primary CPT has been calculated for each outpatient visit using an algorithm that includes Relative Value Units (RVU), hospital facility charges, and whether the CPT code is for an ambulatory surgical procedure.

**Relative Value Units.** Relative value units (RVUs) are a measure of value used in the United States Medicare reimbursement formula for physician services. Medicare pays physicians for services based on submission of a claim using one or more specific CPT codes. For each service, a payment formula contains three RVUs, one for physician

work (including factors such as the physician's time, mental effort or intensity, technical skill, and judgment), one for practice expense (including factors such as the direct expenses of supplies and non-physician labor), and one for malpractice expense. The three RVUs for a given service are each multiplied by a unique geographic practice cost index, referred to as the GPCI adjustment, to account for differences in wages and overhead costs across regions of the country. The sum of the three geographically weighted RVU values is then multiplied by the Medicare conversion factor to determine the amount of payment.

Based on the above, the RVUs can be used as an estimate of the value of physician services. A CPT code with a higher RVU indicates a procedure that takes more time, intensity, skill, and/or resources than a CPT with a lower RVU.

**Calculation of Primary CPT.** For each outpatient visit, the CPT code with the highest RVU is considered to be the primary CPT code. For discharges where there is more than one CPT code with the same RVU, the one with the higher charges is selected as Primary. For discharges with more than one CPT code with the same RVU and the same charges, the next comparison is whether one CPT code is considered to be ambulatory surgery (CPT range 10021-69990) and one is not: in this instance, the CPT code for ambulatory surgery is selected as primary. If the CPT codes are both for ambulatory surgery (or both not), selection as primary CPT is based on service date or on record number.

**CCS Grouping of Procedures into Categories.** Clinical Classification Software (CCS) groups both ICD-9-CM procedure codes and HCPCS/CPT codes into the same single- and high-level categories based on body systems. The single-level procedure CCS

aggregates procedures into 244 mutually exclusive categories, most representing single types of procedures. High-level CCS groups further collapse single-level groups into broad categories based on body systems or condition. CCS groupings for outpatient procedures in the first half of 2014 were based on the presence of an ICD-9-CM procedure code in range 00.00-86.99, and if none, then on the presence of a primary CPT code in CCS high level group 1 through 15. For the second half of 2014, this order was reversed: CCS groupings for outpatient procedures were first based on the presence of a primary CPT code in CCS range, and if none, then on the presence of an ICD-9-CM procedure code in range.

At the time of this report, CCS groupings of outpatient procedure data before July 1, 2014 show some inconsistencies with groupings of outpatient procedure data after this date. Such analyses will continue as more recent data become available.

### **October 1, 2015 Change in Federal Requirements for Reporting of All Diagnoses and Inpatient Procedures**

As of October 1, 2015, federal requirements mandated that hospitals change from using the ICD-9-CM reporting system to using the ICD-10-CM/PCS system for reporting all diagnoses and inpatient procedures.

For all diagnoses, Clinical Classification Software (CCS) groups ICD-9-CM and ICD-10-CM diagnosis codes into the same single- and high-level diagnosis categories based on body systems, making it possible to analyze data before and after October 1, 2015 by quarter to check for discontinuities or inconsistencies. At the time of this report, groupings of diagnosis data before this date are very consistent with groupings of diagnosis data after this date in all hospital settings. As more recent data become available, such analyses will continue and any problems that may appear will be addressed.

For inpatient procedures, Clinical Classification Software (CCS) groups ICD-9-CM and ICD-10-PCS procedure codes into the same single- and high-level procedure categories based on body systems. As with diagnosis codes, inpatient procedure data were analyzed by discharge year and quarter to check for discontinuities or inconsistencies. At the time of this report, groupings of inpatient procedure data before this date are very consistent with groupings of inpatient procedure data after this date. Such analyses will continue as more recent data become available.

CCS groups ICD-9-CM, ICD-10-PCS and HCPCS/CPT codes into the same single- and high-level procedure categories based on body systems, which allows for analyses of procedure groups within and across hospital settings, and across time.
