

Updates at Children with Special Health Needs

Formerly the Care Coordination team, the Care Consultation and Health Systems teams work together to support Vermont children and youth with Special Health Needs and their families by providing consultation to families and community partners and by engaging in system level projects to improve the system of care.

Care Consultation Team

The Care Consultation team provides information and support to families, care teams, and community partners to help them access resources and reduce barriers. We support teams that support families. Our involvement is short term and on an as needed basis until a child's 21st birthday.

Health Systems Team

We work within the system of care framework to improve the services that support children with special health needs and their families. We use data to identify and remove barriers, and develop resources with input from key partners, including the CSHN team, families, and community providers.
