

Global Secure Volunteer Mobilizer

Offered as part of the Global Secure Readiness & Response Suite, this Web-based application provides a system for registering, credentialing, mobilizing and communicating with large volunteer groups, or any other set of “partners,” such as agencies or associations.

Global Secure Volunteer Mobilizer can be customized to effectively manage single or multiple groups of specialized individuals that play a role in public emergency preparedness and response, such as Medical Reserve Corps, Citizen Corps, first responders, structural engineers, military units, search and rescue teams, Neighborhood Watch teams, and even K-9 corps.

The online portal turns volunteer recruitment and registration into a hassle-free process. Applicants can initiate their accounts, complete their profiles and establish and verify training and certifications. Administrators can specify that a group requires administrative approval to join or that applicants are to be automatically admitted.

This product is the only credentials management COTS solution that can mobilize and alert participants via voice-through-phone technology, as well as through text messaging, so that volunteers can be activated after hours (especially if the emergency happens at night), or if they cannot be reached by e-mail.

Once the required licenses and certifications have been verified, Volunteer Mobilizer can automatically notify volunteers of credentials that will soon expire.

Volunteer Mobilizer is a customizable, off-the-shelf application and can be installed on your own network or hosted by Global Secure Systems.

Volunteer Mobilizer is supported by an organization uniquely dedicated to and qualified for the business and technical needs of emergency preparedness and response programs. Volunteer Mobilizer is designed to be integrated and interoperable with other applications. Customizations to product functionality or the online registration portal are available through Global Secure Technology Services.

Product Features and Highlights

- Self-Registration – Let your volunteers enroll online, minimizing support staff requirements.
- Manage Credentials – Volunteers can include details such as certifications and medical credentials.
- Easy Administration – Utilizes tools to approve and reject applicants as well as to verify certifications.
- Coordinate Multiple Groups – Accommodate multiple groups with varying registration, approval and credentialing processes, and even different regional structures and administrators.
- Dedicated Home Pages – Support custom portals for each volunteer group – with user-friendly tools for managing content.
- Mass Mobilization and Alerting – Notify your volunteers via e-mail and voice-through-phone technology.
- Robust and Flexible Query Tools – Find the right volunteers based on their profiles.

Global Secure Systems’ innovative programs are utilized to mobilize, communicate, collaborate, share and disseminate timely information by various agencies responsible for public health, safety, emergency management, homeland security, agriculture, transportation and law enforcement, as well as those in medical services and private industry. Today, Global Secure Systems has partnerships with 23 federal, state and local agencies.

About Global Secure Systems

Global Secure Systems provides emergency planning, response and recovery solutions. Our expertise in information and communication technology and services is currently deployed in states with a combined population of over 100 million people. Our products offer true role-based, multimedia alerting and rich document management capabilities for crisis preparedness and response, mobilization and management of volunteers, and hospital capacity management. We also offer the training and exercises required for an effective response. Global Secure works for one result — to secure the homeland with integrated products and services for the critical incident response community worldwide.
