

Chronic Disease in the Newport District Office Area

3-4-50 is a simple concept to help us grasp the reality that 3 health behaviors contribute to 4 chronic diseases that claim the lives of more than 50 percent of Vermonters. This data brief compares these measures of all Vermont adults and adults living within the Newport District Office area, which includes the Greater Newport Area, Orleans and Northern Essex Counties.

3 BEHAVIORS

Lack of physical activity, poor nutrition and tobacco use are three behaviors that contribute to the development and severity of chronic disease. More than four out of five adults in the Newport District Office area do not eat enough fruits and vegetables. More than two in five do not get the recommended amount of physical activity and one in five adults smoke.

LEAD TO 4 CHRONIC DISEASES

- Around one in six adults have been diagnosed with a lung disease or with diabetes or pre-diabetes.
- Around one in ten residents have been diagnosed with a cardiovascular disease or cancer.
- Adults in the Newport District Office area have higher rates of COPD and cardiovascular disease compared to all Vermont adults.

RESULTING IN MORE THAN 50 PERCENT OF DEATHS

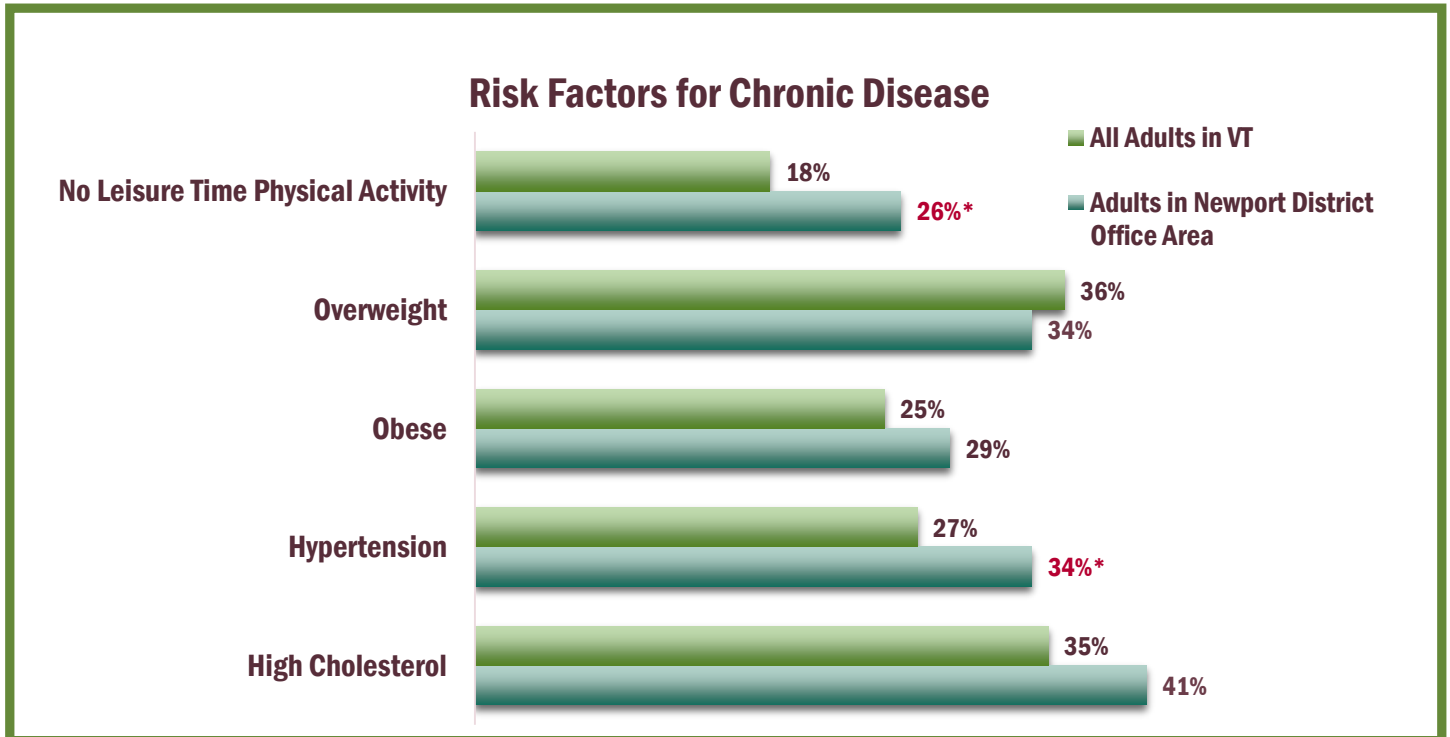

- These four diseases account for 58% of deaths in the Newport District Office area.

Chronic Disease	Vermont		Newport District Office Area	
	% Adults Diagnosed	% of All Deaths	% Adults Diagnosed	% of All Deaths
Lung Diseases (Asthma/COPD)	15% (11%/6%)	6%	16% (11%/9%*)	6%
Diabetes/Pre-Diabetes	13% (8%/6%)	3%	17% (10%/7%)	5%
Cardiovascular Diseases	7%	22%	12%*	22%
Cancer	7%	26%	9%	25%

(*) notes statistical difference

Note: Percentages for combined chronic disease prevalence account for Vermonters with dual diagnosis.
