

Chronic Disease in Chittenden County

3-4-50 is a simple concept to help us grasp the reality that 3 health behaviors contribute to 4 chronic diseases that claim the lives of more than 50 percent of Vermonters. This data brief compares these measures of all Vermont adults to adults living in Chittenden County.

3 BEHAVIORS

Lack of physical activity, poor nutrition and tobacco use are three behaviors that contribute to the development and severity of chronic disease. Three out of four adults in Chittenden County do not eat enough fruits and vegetables and two in five do not get the recommended amount of physical activity. One in seven Chittenden County adults currently smoke – a significantly lower proportion compared to all adults in Vermont.
