

# HPV Vaccine Recommendations for individuals age 9-26 years CDC, October 2016

HPV Vaccine is safe and effective.

HPV vaccine can prevent cervical, vaginal and vulvar cancers in women;  
penile cancers in men; and oropharyngeal and anal cancer  
and genital warts in men and women

## 2-Dose Recommendation

Girls and boys starting the HPV vaccine series **before 15<sup>th</sup> birthday**

- The second dose should be given 6-12 months after the first dose
- Anyone who has received a second dose of HPV vaccine 5 months or more following the first dose is fully vaccinated against HPV

## 3-Dose Recommendation

Girls and boys starting the HPV series **on or after 15<sup>th</sup> birthday**

- The second dose should be given 1-2 months after the first dose. The third dose should be given 6 months after the first dose.
- Anyone age 9-26 years with immunocompromising conditions such as: cancer, HIV infection or autoimmune diseases
- Anyone who received two doses of HPV vaccine less than 5 months apart
