

The CDC has provided the following *Supplemental information and guidance for vaccination providers regarding use of 9-valent HPV vaccine* <https://www.cdc.gov/hpv/downloads/9vHPV-guidance.pdf>. This is intended to address any questions you may receive from patients/parents regarding use of HPV9 in patients partially or fully vaccinated with HPV4.

The Vermont Immunization Program has made HPV9 available to all enrolled VFC/VFA provider practices.

Because there is no ACIP recommendation for additional 9-valent HPV vaccine doses for persons who started the series with quadrivalent or bivalent HPV vaccine and completed the series with 9-valent HPV vaccine, Department supplied vaccine may not exceed a total of three doses of any combination of quadrivalent or 9-valent HPV vaccine.
