Data Logger Quick Reference Guide
DATA LOGGER SETUP

Step 1—Place the glycol bottle inserted in the plastic holder with the vaccines in a central location. Always use the plastic glycol bottle holder.

Step 2—Pull the cord outside and connect it with the data logger.

Step 3 – Secure the mounting bracket outside of the vaccine storage unit.

Step 4 – Insert the connected data logger in the bracket.

Step 5– Press and hold the “Start” button for 4-6 seconds (see second page for detailed instruction on how to start the data logger).

Technical support for data loggers is provided by Control Solutions Inc. by calling 1-888-311-0636
Starting the recorder

Recorder in READY mode

The recorder must be in Ready mode for it to be started.
In Ready mode the recorder displays the time, battery status and the READY icon.

Press and hold the Start button and observe that the STARTING icon starts flashing.

The button needs to be held down until the flashing stops (normally 4-6 seconds however can be longer if the button is not continuously depressed)

Release the Start button when the STARTING icon stops flashing

The recorder enters STARTING mode.
If a start delay has been configured then the TIME DELAY to recording commencement is shown.

After the start delay has timed out (if configured) then the recorder enters RECORDING mode.
If no start delay is configured then immediately proceeds to RECORDING.

The display shows the current temperature, current time, battery status and any alarm triggers and is updated each time a log is taken.
