Regulated Drug Rule

1.0 Authority

This rule is established under the authority of 18 V.S.A. §§ 4201 and 4202 which authorizes the Vermont Board of Health to designate regulated drugs for the protection of public health and safety.

2.0 Purpose

This rule designates drugs and other chemical substances that are illegal or judged to be potentially fatal or harmful for human consumption unless prescribed and dispensed by a professional licensed to prescribe or dispense them, and used in accordance with the prescription. The rule restricts the possession of certain drugs above a specified quantity. The rule also establishes benchmark unlawful dosages for certain drugs to provide a baseline for use by prosecutors to seek enhanced penalties for possession of higher quantities of the drug in accordance with multipliers found at 18 V.S.A. § 4234.

3.0 Definitions

3.1 “Analog” means one of a group of chemical components similar in structure but different with respect to elemental composition. It can differ in one or more atoms, functional groups or substructures, which are replaced with other atoms, groups or substructures.

3.2 “Benchmark Unlawful Dosage” means the quantity of a drug commonly consumed over a twenty-four hour period for any therapeutic purpose, as established by the manufacturer of the drug. Benchmark Unlawful dosage is not a medical or pharmacologic concept with any implication for medical practice. Instead, it is a legal concept established only for the purpose of calculating penalties for improper sale, possession, or dispensing of drugs pursuant to 18 V.S.A. § 4234.

3.3 “Depressant drug” means any drug which contains any substances, its salt, optical isomers, salts of its optical isomers, derivatives or analogs of substances, designated in Section 5.0 of this rule as habit forming because of its effect on the central nervous
system or as having a serious potential for abuse arising out of its effect on the central nervous system.

3.4 “Derivative” shall mean a compound that can be obtained from a parent compound as a result of a chemical reaction which replaces one atom/functional group with a different one.

3.5 “Hallucinogenic Drug” means stramonium, mescaline or peyote, lysergic acid diethylamide, and psilocybin, and all synthetic equivalents of chemicals contained in resinous extracts of Cannabis sativa, or any salts or derivatives or compounds of any preparations or mixtures thereof, and any other substance which is designated as habit-forming or as having a serious potential for abuse arising out of its effect on the central nervous system or its hallucinogenic effect in the regulations adopted by the Board of Health under 18 V.S.A.§ 4202.

3.6 “Narcotic drug” means opium, coca leaves, pethidine (isonipecaine, meperidine), and opiates or their compound, manufacture, salt, alkaloid, or derivative, and every substance neither chemically nor physically distinguishable from them, and preparations containing such drugs or their derivatives, by whatever trade name identified and whether produced directly or indirectly by extraction from substances of vegetable origin, or independently by means of chemical synthesis or by a combination of extraction and chemical synthesis, as the same are so designated in the regulations adopted by the Board of Health under 18 V.S.A.§ 4202.

3.7 "Regulated drug" means a narcotic drug, a depressant or stimulant drug, other than methamphetamine, a hallucinogenic drug, Ecstasy, marijuana, or methamphetamine whose possession or use is regulated by law.

3.8 “Stimulant drug” means any drug which contains any quality of a substance, its salt, optical isomers, salts of it optical isomers, derivatives or analogs of substances, designated in Section 4.0 of this rule as habit forming because of its effect on the central nervous system or as having a serious potential for abuse arising out of its effect on the central nervous system.
