Influenza activity was categorized as **Widespread** for MMWR Week 2

- Increased levels of Influenza-like Illness (ILI) activity seen in emergency departments
  - Of the total emergency room visits, **3.7% were due to ILI**
- Increased levels of ILI activity reported by outpatient providers
  - Sentinel providers reported **3.1% of patients had ILI**
- Vermont Department of Health Laboratory reported **14 positive flu tests**
- National Respiratory and Enteric Virus Surveillance System reported **82 positive flu tests**
- **1 outbreak at a LTCF in the Southwest Region**

*Based on CDC’s Activity Estimates Definitions: [www.cdc.gov/flu/weekly/overview.htm](http://www.cdc.gov/flu/weekly/overview.htm)
Syndromic Surveillance of Influenza-Like Illness (ILI) at Vermont Hospitals, 2017-2018 vs. Historic Data

*Note: 2009-2010 flu season excluded
** Note: For the 2017-2018 flu season, VDH switched from using EARS (Early Aberration Reporting System) for syndromic surveillance to using ESSENCE (Electronic Surveillance System for the Early Notification of Community-based Epidemics)
Sentinel providers report the number of patients with an ILI seen by their practices each week.

ILI is defined as a measured fever of at least 100° F and cough and/or sore throat, without a known cause other than influenza.

There are 16 medical practices located throughout the state currently partnering with the Health Department as sentinel sites.

Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by MMWR Week, 2015/16 – 2017/18 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week, 2015/16 – 2017/18 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week 2017/2018 Flu Season

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Individual influenza laboratory results are not reported to the Vermont Department of Health. The data below represents an unknown subset of the actual number of flu tests done in Vermont.

Vermont Department of Health Laboratory (VDHL) tests specimens for flu to identify exactly which strains are currently causing illnesses in the state. Flu testing at the state laboratory is for surveillance purposes and completed on specimens submitted to VDHL.

National Respiratory and Enteric Virus Surveillance System (NREVSS) data is collected from collaborating university and community hospital laboratories. These participating laboratories report positive results for a number of viruses, including influenza, on a weekly basis. Three Vermont hospitals contribute data into this system and is voluntary.

*Laboratory data obtained from VDHL and from NREVSS may include the same specimens tested for flu. They are not mutually exclusive. Facilities that report to NREVSS may submit a specimen to VDHDL for additional testing, therefore being reported both in NREVSS and VDHL.
### Long-Term Care Facility Outbreaks

- **Number of Outbreaks**: 11
- **Number of Lab Confirmed Outbreaks**: 8

#### Outbreak Regions
- Central: 1
- Northeastern: 2
- Northwestern: 3
- Southeastern: 2
- Southwestern: 3

### School Outbreaks

- **Number of Outbreaks**: 0

#### Outbreak Regions
- Central: 0
- Northeastern: 0
- Northwestern: 0
- Southeastern: 0
- Southwestern: 0

### Outbreaks at Other Facilities

- **Number of Outbreaks**: 0

#### Outbreak Regions
- Central: 0
- Northeastern: 0
- Northwestern: 0
- Southeastern: 0
- Southwestern: 0

---

*An outbreak at a LTCF is defined as a single resident with a positive flu test plus other cases of respiratory illness OR two or more residents with ILI which includes two or more of the following symptoms: fever, nonproductive cough, myalgia, pharyngitis.

---

**MAP OF INFLUENZA SURVEILLANCE REGIONS IN VERMONT**

During week 2, influenza activity increased in the United States. The most frequently identified flu virus type reported by public health laboratories was flu A(H3).

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
Ten influenza-associated pediatric death were reported to CDC during week 2
So far this season, there has been 30 influenza-associated pediatric deaths reported to CDC
There have been no influenza-associated pediatric deaths reported in Vermont this season

Full FLuView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
The proportion of outpatient visits for influenza-like Illness for week 2 was 6.3% which was above the national baseline of 2.2%

Percentage of Visits for Influenza-like Illness (ILI) Reported by the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Weekly National Summary, 2017-2018 and Selected Previous Seasons

Full FLuView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
During week 2, the following ILI activity levels were experienced:

- New York City, Puerto Rico, and 32 states experienced high activity (Alabama, Arizona, Arkansas, California, Florida, Georgia, Hawaii, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Mississippi, Missouri, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Virginia, West Virginia, Wisconsin, and Wyoming).
- Three states experienced minimal ILI activity (Delaware, Maine, and Montana).

*This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state.

Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map is based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data are received. Differences in the data presented here by CDC and independently by some state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.
Geographic spread for week 2**

**Sporadic** activity was reported by the US Virgin Islands  
**Local** activity reported by D.C. and 1 state  
**Regional** activity reported by Guam  
**Widespread** activity reported by Puerto Rico 49 states

*Weekly Influenza Activity Estimates Reported by State & Territorial Epidemiologists*

Week ending January 13, 2019 - Week 2

This map indicates geographic spread & does not measure the severity of influenza activity

**Based on CDC’s Activity Estimates Definitions: [www.cdc.gov/flu/weekly/overview.htm](https://www.cdc.gov/flu/weekly/overview.htm)  
Full FLuView report can be found here: [https://www.cdc.gov/flu/weekly/index.htm](https://www.cdc.gov/flu/weekly/index.htm)
Flu Near You is a website where people can anonymously self-report any symptoms they experienced in the past week or if they were healthy. These reports help us track flu both in Vermont and the US.

Flu activity in the United States

- **Last 7 days**
  - **6.02 %**
    - Flu-like symptoms (1039 reports)
  - **16.72 %**
    - Other symptoms (2884 reports)
  - **83.28 %**
    - No symptoms (14364 reports)

The percentage of flu-like symptoms reports in the United States has decreased by 4.0 % since last week.
Flu activity in Vermont

Last 7 days

5.17 %
3 reports
Flu-like symptoms

13.79 %
8 reports
Other symptoms

86.21 %
50 reports
No symptoms

The percentage of flu-like symptoms reports in Vermont has increased by 2.5% since last week.
