Influenza activity was categorized as **Sporadic** for MMWR Week 42

- Levels of Influenza-like Illness (ILI)* activity seen in emergency departments remained the same
  - Of the total emergency room visits, **1% were due to ILI**
- Slightly decreased levels of ILI activity reported by outpatient providers
  - Sentinel providers reported **0.8% of patients had ILI**
- Vermont Department of Health Laboratory reported **1 positive flu test**
- National Respiratory and Enteric Virus Surveillance System reported **0 positive flu tests**
- No outbreaks reported

---

**ILI is defined as a measured fever of at least 100°F and cough or sore throat, without a known cause other than influenza.**

**Based on CDC’s Activity Estimates Definitions: [www.cdc.gov/flu/weekly/overview.htm](http://www.cdc.gov/flu/weekly/overview.htm)**

**FLU SURVEILLANCE SEASON**

**START**

MMWR Week 40
(Week End Date 10/6/18)

**END**

MMWR Week 20
(Week End Date 5/18/19)
Syndromic Surveillance* of Influenza-Like Illness at Vermont Hospitals, 2018-2019 vs. Historic Data

Week ending 10/20/2018 (Week 42)

*Data pulled from ESSENCE (Electronic Surveillance System for the Early Notification of Community-based Epidemics)
Sentinel providers report the number of patients with ILI seen by their practice each week. There are 15 medical practices located throughout the state currently providing data.

Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by MMWR Week, 2016/17 – 2018/19 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week, 2016/17 – 2018/19 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week 2018/2019 Flu Season

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Individual flu results are not reported to the Vermont Department of Health. The data below represents an unknown subset of the actual number of flu tests performed in Vermont.

Vermont Department of Health Laboratory (VDHL) tests specimens for flu to identify exactly which strains are currently causing illnesses in the state. Flu testing at the state laboratory is for surveillance purposes and is performed on specimens collected during an institutional outbreak and routinely by sentinel providers.

National Respiratory and Enteric Virus Surveillance System (NREVSS) data is collected from collaborating university and community hospital laboratories. These participating laboratories report positive results for a number of viruses, including influenza, on a weekly basis. Three Vermont hospitals voluntarily contribute data into this system.

*Laboratory data obtained from VDHL and NREVSS may include the same specimens tested for flu, they are not mutually exclusive. Facilities that report to NREVSS may submit a specimen to VDHL for additional testing, therefore being reported both in NREVSS and VDHL.
### OUTBREAK DATA

#### Long-Term Care Facility Outbreaks
- **Number of Outbreaks**: 0
- **Outbreak Regions**:
  - Central: 0
  - Northeastern: 0
  - Northwestern: 0
  - Southeastern: 0
  - Southwestern: 0

#### School Outbreaks
- **Number of Outbreaks**: 0
- **Outbreak Regions**:
  - Central: 0
  - Northeastern: 0
  - Northwestern: 0
  - Southeastern: 0
  - Southwestern: 0

#### Outbreaks at Other Facilities
- **Number of Outbreaks**: 0
- **Outbreak Regions**:
  - Central: 0
  - Northeastern: 0
  - Northwestern: 0
  - Southeastern: 0
  - Southwestern: 0

**MAP OF INFLUENZA SURVEILLANCE REGIONS IN VERMONT**

*Suspected outbreaks of ILI should be reported to the health department*
Influenza activity in the United States remains low. Influenza A(H1N1), A(H3N2), and influenza B viruses continue to co-circulate. Influenza A(H1N1) viruses were most commonly reported by public health laboratories during the most recent three weeks.
No influenza-associated pediatric deaths were reported to CDC during week 42.
So far this season, there has been 1 influenza-associated pediatric death reported to CDC.
There have been no influenza-associated pediatric deaths reported in Vermont this season.

Number of Influenza-Associated Pediatric Deaths by Week of Death:
2015-2016 season to present

- 2015-2016: Number of Deaths Reported = 94
- 2016-2017: Number of Deaths Reported = 110
- 2017-2018: Number of Deaths Reported = 183
- 2018-2019: Number of Deaths Reported = 1

Full FluView report can be found here: [https://www.cdc.gov/flu/weekly/index.htm](https://www.cdc.gov/flu/weekly/index.htm)
The proportion of outpatient visits for Influenza-like Illness for week 42 was 1.5% which is below the national baseline of 2.2%.

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
During week 42, the following ILI activity levels were experienced:

- Puerto Rico and one state (Georgia) experienced low ILI activity.

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet

2018-19 Influenza Season Week 42 ending Oct 20, 2018

*This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of influenza within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state.

Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map is based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data are received. Differences in the data presented here by CDC and independently by some state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
Geographic spread for week 42**:

**No activity** was reported by 4 states.

**Sporadic** activity was reported by D.C., Puerto Rico, the US Virgin Islands, and 42 states.

**Local** activity reported by 4 states.

**Regional** activity was not reported.

**Widespread** activity was not reported.
