Influenza activity was categorized as **Local** for MMWR Week 49

- Decreased levels of Influenza-like Illness (ILI) activity seen in emergency departments
  - Of the total emergency room visits, **1.4% were due to ILI**
- Increased levels of ILI activity reported by outpatient providers
  - Sentinel providers reported **1.3% of patients had ILI**
- Vermont Department of Health Laboratory reported **0 positive flu tests**
- National Respiratory and Enteric Virus Surveillance System reported **6 positive flu tests**
- **One outbreak at a LTCF in the Northeastern Region**

*Based on CDC’s Activity Estimates Definitions: [www.cdc.gov/flu/weekly/overview.htm](http://www.cdc.gov/flu/weekly/overview.htm)
Syndromic Surveillance of Influenza-Like Illness (ILI) at Vermont Hospitals, 2017-2018 vs. Historic Data

*Note: 2009-2010 flu season excluded
** Note: For the 2017-2018 flu season, VDH switched from using EARS (Early Aberration Reporting System) for syndromic surveillance to using ESSENCE (Electronic Surveillance System for the Early Notification of Community-based Epidemics)
Sentinel providers report the number of patients with an ILI seen by their practices each week.

ILI is defined as a measured fever of at least 100° F and cough and/or sore throat, without a known cause other than influenza.

There are 11 medical practices located throughout the state currently partnering with the Health Department as sentinel sites.

---

**Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by MMWR Week, 2015/16 – 2017/18 Flu Seasons**

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.*
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week, 2015/16 – 2017/18 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week 2017/2018 Flu Season

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Individual influenza laboratory results are not reported to the Vermont Department of Health. The data below represents an unknown subset of the actual number of flu tests done in Vermont.

Vermont Department of Health Laboratory (VDHL) tests specimens for flu to identify exactly which strains are currently causing illnesses in the state. Flu testing at the state laboratory is for surveillance purposes and completed on specimens submitted to VDHL.

National Respiratory and Enteric Virus Surveillance System (NREVSS) data is collected from collaborating university and community hospital laboratories. These participating laboratories report positive results for a number of viruses, including influenza, on a weekly basis. Three Vermont hospitals contribute data into this system and is voluntary.

*Laboratory data obtained from VDHL and from NREVSS may include the same specimens tested for flu. They are not mutually exclusive. Facilities that report to NREVSS may submit a specimen to VHDl for additional testing, therefore being reported both in NREVSS and VDHL.
### ILI OUTBREAK DATA

Suspected outbreaks of ILI should be reported to the health department.

*An outbreak at a LTCF is defined as a single resident with a positive flu test plus other cases of respiratory illness OR two or more residents with ILI which includes two or more of the following symptoms: fever, nonproductive cough, myalgia, pharyngitis.

MAP OF INFLUENZA SURVEILLANCE REGIONS IN VERMONT

During week 49, influenza activity increased in the United States. The most frequently identified flu virus type reported by public health laboratories was flu A.

Influenza Positive Tests Reported to CDC by U.S. Public Health Laboratories, National Summary, 2017-2018 Season

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
One influenza-associated pediatric death was reported to CDC during week 49.
So far this season, there has been 8 pediatric deaths reported to CDC.
There have been no pediatric deaths reported in Vermont this season.

Full FLuView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
The proportion of outpatient visits for influenza-like Illness for week 49 was **2.7%** which was **above the national baseline of 2.2%**

Full FLuView report can be found here: [https://www.cdc.gov/flu/weekly/index.htm](https://www.cdc.gov/flu/weekly/index.htm)
During week 49, the following ILI activity levels were experienced:

- Four states experienced high activity (Louisiana, Mississippi, South Carolina, and Texas).
- New York City, Puerto Rico, and 16 states experienced low ILI activity (Arkansas, California, Colorado, Hawaii, Indiana, Kansas, Massachusetts, Minnesota, Missouri, Nebraska, Nevada, Oklahoma, Oregon, South Dakota, Virginia, and Wyoming).
- Data were insufficient to calculate an ILI activity from the District of Columbia.

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet

2017-18 Influenza Season Week 49 ending Dec 09, 2017

*This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state.

Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map is based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data are received. Differences in the data presented here by CDC and independently by some state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

Full FluView report can be found here: [https://www.cdc.gov/flu/weekly/index.htm](https://www.cdc.gov/flu/weekly/index.htm)
Geographic spread for week 49**

**Sporadic** activity reported by 2 states, D.C., and the U.S. Virgin Islands

**Local** activity reported by 10 states

**Regional** activity reported by 26 states and Puerto Rico

**Widespread** activity reported by 12 states

**Based on CDC’s Activity Estimates Definitions:**
