Influenza activity was categorized as **Local** for MMWR Week 9

- Decreased levels of Influenza-like Illness (ILI) activity seen in emergency departments
  - Of the total emergency room visits, **5.6% were due to ILI**
- Decreased levels of ILI activity reported by outpatient providers
  - Sentinel providers reported **4.8% of patients had ILI**
- Vermont Department of Health Laboratory reported **4 positive flu tests**
- National Respiratory and Enteric Virus Surveillance System reported **136 positive flu tests**
- **2 Outbreaks**
  - 1 outbreak at a LTCF in the Southwest Region
  - 1 outbreak at a child care facility in the Southwest Region

*Based on CDC’s Activity Estimates Definitions: [www.cdc.gov/flu/weekly/overview.htm](http://www.cdc.gov/flu/weekly/overview.htm)
Syndromic Surveillance of Influenza-Like Illness (ILI) at Vermont Hospitals, 2017-2018 vs. Historic Data

Week ending 3/3/2018 (Week 9)

* Note: 2009-2010 flu season excluded
** Note: For the 2017-2018 flu season, VDH switched from using EARS (Early Aberration Reporting System) for syndromic surveillance to using ESSENCE (Electronic Surveillance System for the Early Notification of Community-based Epidemics)
Sentinel providers report the number of patients with an ILI seen by their practices each week.

ILI is defined as a measured fever of at least 100° F and cough and/or sore throat, without a known cause other than influenza.

There are 16 medical practices located throughout the state currently partnering with the Health Department as sentinel sites.

Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by MMWR Week, 2015/16 – 2017/18 Flu Seasons

Week ending 3/3/2018 (Week 9)

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Report by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week, 2015/16 – 2017/18 Flu Seasons

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Percent of Visits Reported by Vermont Sentinel Providers* with Influenza-like Illness by Age Group by MMWR Week 2017/2018 Flu Season

*The ILI data are more robust when a higher percentage of provider reports are received. Recent data are provisional due to reporting lags.
Individual influenza laboratory results are not reported to the Vermont Department of Health. The data below represents an unknown subset of the actual number of flu tests done in Vermont.

Vermont Department of Health Laboratory (VDHL) tests specimens for flu to identify exactly which strains are currently causing illnesses in the state. Flu testing at the state laboratory is for surveillance purposes and completed on specimens submitted to VDHL.

National Respiratory and Enteric Virus Surveillance System (NREVSS) data is collected from collaborating university and community hospital laboratories. These participating laboratories report positive results for a number of viruses, including influenza, on a weekly basis. Three Vermont hospitals voluntarily contribute data into this system.

*Laboratory data obtained from VDHL and from NREVSS may include the same specimens tested for flu. They are not mutually exclusive. Facilities that report to NREVSS may submit a specimen to VDHL for additional testing, therefore being reported both in NREVSS and VDHL.

Suspected outbreaks of ILI should be reported to the health department

MAP OF INFLUENZA SURVEILLANCE REGIONS IN VERMONT
During week 9, influenza activity decreased in the United States. The number of influenza A and influenza B viruses reported were similar.

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
5 influenza-associated pediatric death were reported to CDC during week 9. So far this season, there has been 119 influenza-associated pediatric deaths reported to CDC. **There have been no influenza-associated pediatric deaths reported in Vermont this season.**

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
The proportion of outpatient visits for influenza-like Illness for week 9 was **3.7%** which was **above the national baseline of 2.2%**.
During week 9, the following ILI activity levels were experienced:

- New York City and 21 states experienced high activity (Alaska, Arizona, Arkansas, Georgia, Indiana, Kansas, Kentucky, Massachusetts, Michigan, Missouri, Nebraska, New Jersey, New Mexico, New York, Pennsylvania, South Carolina, South Dakota, Texas, Vermont, Virginia, and Wyoming).
- Fifteen states experienced moderate ILI activity (Alabama, California, Colorado, Connecticut, Louisiana, Maryland, Minnesota, Mississippi, New Hampshire, North Carolina, Oklahoma, Oregon, Rhode Island, West Virginia, and Wisconsin).
- Nine states experienced minimal ILI activity (Delaware, Florida, Idaho, Iowa, Maine, North Dakota, Ohio, Tennessee, and Utah).

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet
2017-18 Influenza Season Week 9 ending Mar 03, 2018

*This map uses the proportion of outpatient visits to health care providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

Data collected in ILINet may disproportionately represent certain populations within a state, and therefore, may not accurately depict the full picture of influenza activity for the whole state.

Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map is based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data are received. Differences in the data presented here by CDC and independently by some state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

Full FluView report can be found here: https://www.cdc.gov/flu/weekly/index.htm
Geographic spread for week 9**:

**No activity** was reported by U.S. Virgin Islands.

**Sporadic** activity was not reported.

**Local** activity reported by D.C. and 4 states.

**Regional** activity was reported by Guam and 12 states.

**Widespread** activity reported by Puerto Rico and 34 states.

**Based on CDC’s Activity Estimates Definitions:**
www.cdc.gov/flu/weekly/overview.htm
