

Current Vermont Department of Health recommendations on [preventing COVID-19](#).

Syndromic Surveillance

The Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE) reflects all visits from participating emergency departments (ED). The chart below shows a rolling seven-day average of all ED visits in Vermont hospitals that include a COVID-19 diagnosis (emergency and non-emergency, in- and outpatient visits).

Variant Proportions - Clinical Specimens

XFG is the most commonly sequenced variant. Limited specimen quantities may impact proportion accuracy. For more timely data, see the [National SARS-CoV-2 Genomic Surveillance System](#) which includes data from Vermont and other states. Virus Concentrations and Trends – Wastewater Monitoring

Concentrations are low in Middlebury, Montpelier, Essex Junction, and South Burlington. Concentrations are elevated in St. Albans and Ludlow. Some week-to-week fluctuation is expected.

Montpelier, South Burlington and Essex Junction wastewater districts participate in [WastewaterSCAN](#). The graph below shows COVID-19 levels and trends over time in these districts.
