

2024 Physician Census

Statistical Report, August 2026

HealthVermont.gov
802-863-7200

Acknowledgements

This report would not have been possible without the cooperation of the Vermont Department of Health's Board of Medical Practice and the Secretary of State's Office of Professional Regulation. We gratefully acknowledge their assistance in the collection of this information.

We also wish to express our appreciation to all the physicians who took the time and effort to complete the census form.

Change in Reporting for 2024

Due to large increases of physicians reporting telemedicine not specific to a Vermont location as their primary mode of active practice, we have excluded them from most tables in the report. Previously, these physicians did not have full-time equivalents (FTEs) calculated since the extent of their Vermont specific work could not be known, but they were included in the total numbers of physicians active in Vermont in tables. The number of telemedicine physicians has grown quite dramatically in the past few censuses and continuing to include these physicians in tables projects an abundance in the number of physicians that misrepresents actual providers available in Vermont.

In addition, we also have several providers who work less than four hours a week on average in Vermont who were also typically included in tables of previous reports and those providers have been excluded from most tables in this report. For 2024, there were 229 providers who worked less than 0.1 FTE and the sum of their FTEs was less than eight. By dropping these physicians from most tables, we hope to provide a more accurate picture of the physicians providing most of the care in Vermont.

With these changes, comparisons to previously published reports require more consideration. In general, FTEs will be the least impacted by this change as FTEs have not been calculated for telemedicine providers and the FTEs provided by the physicians working less than four hours a week are a very small fraction of the total FTEs represented in the tables. Numbers of physicians, especially in lines describing total numbers of physicians, will be much lower than numbers seen in older reports, since the providers described above have been excluded. In tables comparing 2024 data to older censuses, telemedicine and low hours providers have been excluded from the older data as well, so that differences between years are not exaggerated due to this change in analysis. Due to this change, these numbers for older years will differ from numbers published in the same tables from older reports.

Introduction

Since the health of Vermonters depends, in part, on access to health care, we need to measure the supply of health care providers, including their distribution by geography and specialty. In this report we present detailed profiles of physicians practicing in Vermont as of the end of the year 2024; these data can be used as the basis for policy analysis, shortage area designations, and recruitment and retention activities.

Data Collection

This report includes physicians (MDs and DOs) who renewed their license as of late 2024. A link to the online Workforce Census was included in the MD online relicensing conducted by the Vermont Board of Medical Practice in the fall of 2024. The questions asked are included in this report as Appendix C. The Board followed up with those who did not originally respond to the census.

A separate board licenses Doctors of Osteopathy (DO). A link to the same census was included in the online relicensing done in late summer of 2024. Follow-up was conducted as needed. Data from the DO census were combined with the MD census data to produce this report.

Included in this report are physicians who provide patient care in Vermont. Excluded are the substantial number of physicians who maintain Vermont licenses even though they do not practice in Vermont. New to this year's report, physicians working less than four hours a week on average and physicians providing care only through telemedicine not specific to Vermont locations are excluded from most tables. Federally employed physicians who do not provide patient care outside a federal facility are not required to maintain a Vermont license, and are therefore not included, unless they do have a Vermont license. Physicians participating in residency programs are not required to maintain a Vermont license, although some choose to do so. For consistency, all residents, clinical fellows and research fellows are excluded from this report.

Similar surveys have been conducted every two years since 1992. Comparisons of the 2024 census to previous censii are included in this report. Similar data are collected from other health professionals. Results are available on the Department of Health web site at healthvermont.gov/health-care-workforce-reports.

Limitations

Information was obtained from almost all potentially active physicians who renewed their license by the end of 2024. One physician could not be reached and is not included. Physicians who were in residency or fellowship training at the time are not included in this report.

Locum tenens practitioners fill positions on a temporary basis when practitioners are on sabbatical, vacation, or absent for an extended period. Work done on a locum tenens basis

for less than a year is not counted in this report, other than in the tables in the special groups section. Those who reported working in the same locum tenens position for more than a year are counted – unlike in reports 2016 and prior. Some physicians worked partly as locum tenens and partly not - their non-locum-tenens work is reported here. Physicians who worked partly in Vermont and partly elsewhere are reported here, but only their Vermont work is reported.

Some physicians provide services remotely from out of state to Vermont patients, and the portion of their work related to Vermont patients could not be determined. Therefore, hours are not reported, and full-time equivalents (FTEs) are not computed, for telemedicine - as well as all radiologists and pathologists, since many of them work remotely. Some physicians reported Vermont-specific telemedicine, meaning that they worked a specific number of hours on contract remotely providing care for a specific Vermont practice. They are counted where other telemedicine is not, since we could compute Vermont FTEs for them.

A significant number of physicians provide patient care for only a small number of hours in an average week. Some work mainly in teaching, research or administration, or are semi-retired, work mainly out of state, or only work in Vermont seasonally. In a change from previous years, they are excluded from most tables in this report to provide a more accurate depiction of counts of providers performing most of the FTEs. When comparing numbers to previously reported years, expect to see a sizable difference in total numbers but a much smaller difference in FTEs. The numbers for previous years used in the comparison tables in this report have been adjusted to exclude these low hours individuals to match and so will differ from previously published reports.

The data and report were reviewed for accuracy and consistency. Missing and/or inconsistent data items were evaluated as to their importance. Non-critical missing data items are reported as missing. In a few instances where critical information was missing, but the physician is known to be practicing the same specialty in the same town as in 2022, the missing data were replaced with information from the previous census.

In general, information for this report was self-reported and not further verified. Data in this report are, therefore, subject to the limitations associated with the use of self-reported surveys. The possibility of misinterpretation of survey items is always present.

Detailed notes and definitions are included in the Appendices.

If you need help accessing or understanding this information, contact AHS.VDHPPhysicianCensus@vermont.gov.

Summary

This report includes data reported by 2028 physicians providing patient care in Vermont. This includes 1893 Medical Doctors and 135 Doctors of Osteopathy. Residents and fellows are excluded from this report. In a change from past reports, 970 physicians providing telemedicine services only and 229 physicians reporting less than four hours a week of clinical care are also excluded. Full-time equivalents (FTEs) were not calculated for providers working solely through telemedicine in previous reports so comparisons of FTEs from previous years should not be as greatly impacted by this change, but numbers of physicians will appear quite different. In any comparisons to previous census years in this report, general telemedicine and low hours physicians will also be dropped from the previous year's data, so that differences due to this change in analysis will not be highlighted.

- 529 physicians provide mainly primary care, and 552 physicians provide any primary care, corresponding to 402.1 FTEs – continuing the decrease that was first noted in 2016.
- 1499 physicians provide mainly specialty care. Excluding radiologists and pathologists, 1365 physicians provide any specialty care, corresponding to 1024.8 FTEs. This is an increase from 2022, continuing the trend that has been seen since 2014.
- 31% of primary care physicians are over age 60. This is a continued decrease from 32% in 2022, and as numbers continue to remain relatively flat, indicates that older primary care physicians are leaving active practice.
- In four of the 14 counties, 45% or more of the primary care physicians are over age 60: Grand Isle (50%), Essex (50%), Franklin (46%), and Windham (45%).
- 27% of specialists are over age 60. This includes 35% of internists (internal medicine specialists) and 37% of urologists.
- 78% of primary care physicians (in office settings) accept new patients, but only 74% accept new Medicaid patients and 70% accept new Medicare patients, which is a continued decrease in new Medicaid patient acceptance and a slight increase in Medicare.
- 1035 or 45% of Vermont physicians, and 60% of primary care physicians, are women. In 1996 only 22% of Vermont physicians, and 28% of primary care physicians, were women. Women make up 39% of the active specialty care physicians in Vermont in 2024, unchanged from 2022.
- 684 or 34% of Vermont's physicians have attended the University of Vermont's College of Medicine and/or have completed a residency or fellowship there. 422 (21%) are graduates of the College of Medicine, and 444 (22%) did a residency or fellowship there.
- Vermont saw a decrease of 4.2 primary care FTEs between 2022 and 2024, which is a continued trend, but much less of a drop than 2020 to 2022. Conversely, there is an

increase of 37.6 FTEs in specialty care, which is also a continuing trend and a larger increase than what was seen from 2020 to 2022.

- Between 2014 and 2024 primary care FTEs in Vermont declined by 73.4 (15%). But over the same period, specialist FTEs have gone up by 191.5 (23%).
- The statewide ratio of primary care physician FTEs to population decreased between 2022 and 2024, with the largest decreases in Orleans and Washington Counties. Addison, Chittenden, Grand Isle, Lamoille, Rutland, and Windham Counties did have increased ratios of primary care FTEs to population even though the statewide ratio decreased.
- 57 physicians (not counted above and excluded from most tables in the report) practice solely in *locum tenens* capacity in Vermont and provide 14.4 FTEs of patient care, primarily in the hospitals (2.0 FTEs – outpatient, 3.9 FTEs – inpatient, and 2.8 FTEs – emergency department). Unlike in reports prior to 2018, those who have worked under such a contract for more than a year are *not* counted as *locum tenens*.

This version excludes telemedicine.

The 2024 census only asked about one residency for each physician (Note 14). This table uses the standard mapping of states to regions, but separates out VT and NH (Note 12). Location of residency is not known for 1 of the primary care physicians and 2 of the specialists.

Table 8 -- VT Physicians, 2024
Training at the University of Vermont

	Total	Doctors with Known Medical School	Graduated from VT (UVM) Medical School
Primary Care	529	529	136 (26%)
Specialists	1499	1494	286 (19%)
Total	2028	2023	422 (21%)
	Total	Doctors with Known Residency	Completed VT (UVM)MC Residency
Primary Care	529	528	131 (25%)
Specialists	1499	1497	313 (21%)
Total	2028	2025	444 (22%)
	Total	Doctors with Any Known Training	Any Training in VT
Primary Care	529	529	207 (39%)
Specialists	1499	1498	477 (32%)
Total	2028	2027	684 (34%)

Percentages are based on the number of physicians with known training (in the same row).

This table excludes telemedicine. The 2024 census only asked about one residency for each physician (Note 14).

182 Vermont physicians both graduated from a VT Medical School (UVM) and did a residency in VT (UVM)MC. Therefore, the number under 'Any Training in VT' is less than the sum of VT graduates and residents (see Note 17).

Vermont Physicians Distribution of Full Time Equivalents (FTEs)

In this table physicians may be counted more than once (Note 4).
Pathologists, radiologists, and telemedicine are excluded from this table (Note 3).

Table 14 -- VT Physicians, 2024
Primary Care Physicians: Ratio of Full Time Equivalents (FTEs)
to Population, by County

County	FTEs	Population	FTEs per 100,000 Population	Population per FTE
STATEWIDE TOTAL	402.1	648,493	62.0	1,613
Addison County	28.6	38,047	75.1	1,331
Bennington County	28.5	37,039	77.0	1,299
Caledonia County	18.5	30,535	60.5	1,652
Chittenden County	146.4	170,851	85.7	1,167
Essex County	1.4	6,037	23.0	4,351
Franklin County	19.4	51,066	37.9	2,638
Grand Isle County	2.1	7,528	27.6	3,628
Lamoille County	15.4	26,248	58.8	1,701
Orange County	14.2	30,050	47.3	2,115
Orleans County	11.9	27,726	42.9	2,329
Rutland County	30.2	60,198	50.2	1,994
Washington County	29.4	59,844	49.2	2,032
Windham County	30.3	45,627	66.4	1,507
Windsor County	25.8	57,697	44.8	2,232

Only primary care physicians are included in this table.
An FTE is defined as 40 (or more) hours/week, 48 weeks/year.
The FTEs are rounded to 1 decimal for display only.
The ratios were calculated using the unrounded values,
then rounded in turn to 1 decimal for display.

Population estimates are for July 2024, from the Census Bureau
(see Note 4 and Note 7).

Preventive Medicine	2	.5
Unlisted Specialty	20	7.7

FTEs not calculated for pathologists, radiologists (except radiation oncology), and telemedicine (Note 3).
Some specialties were regrouped and may not match other specialty tables in this report - for example, urgent care includes 3 physicians who reported an urgent care specialty as well as physicians who reported a separate specialty but in an urgent care setting.
*Family Practice or General Practice reported as specialty in atypical setting, such as addiction center or hospice.

Table 16 -- VT Physicians, 2024

All telemedicine & locum tenens physicians are excluded from this table.

Physicians were asked if they plan to retire, or leave their Vermont practice, within the next 12 months, and, separately, whether they plan to reduce their patient care hours in Vermont within the next 12 months.

100 physicians (5%) answered 'yes' to both questions.

Physicians who indicated they planned to retire or leave Vermont were excluded from the numerator for the percentage planning to reduce hours. Physicians who did not answer the question on retirement were excluded from calculation of the percentage planning to retire or leave Vermont. Physicians who did not answer the question on reducing hours were excluded from calculation of the percentage planning to reduce hours.

All telemedicine & locum tenens physicians are excluded from this table. Percentages here are of the FTEs, not physicians nor sites.

Physicians were asked if they plan to retire, or leave their Vermont practice, within the next 12 months, and, separately, whether they plan to reduce their patient care hours in Vermont within the next 12 months.

59.7 FTE physicians (4%) answered 'yes' to both questions.

Physicians who indicated they planned to retire or leave Vermont were excluded from the numerator for the percentage planning to reduce hours. Physicians who did not answer the question on retirement were excluded from calculation of the percentage planning to retire or leave Vermont. Physicians who did not answer the question on reducing hours were excluded from calculation of the percentage planning to reduce hours.

See Note 10 regarding tabulation of availability.

Only office settings are included (Note 11).

Pathologists, radiologists, hospitalists, and emergency medicine are excluded.

Physicians were asked if they accept new patients and if they participate in Medicaid and Medicare for each site where they practice. Each physician is counted once, in their main specialty. Only sites where the physician works in their main specialty are included. A physician is counted as accepting new patients if they accept new patients at any site, and as participating in Medicaid or Medicare if they participate at any site.

Denominators for percentages do not include unknowns.

Rutland	30.2	60,899	49.6	2,017
Springfield	10.6	28,246	37.4	2,675
St. Albans	18.6	46,973	39.6	2,525
St. Johnsbury	15.7	27,799	56.6	1,768
White River Jct	24.0	50,367	47.6	2,100

Only primary care physicians are included in this table.
An FTE is defined as 40 (or more) hours/week, 48 weeks/year.
The FTEs are rounded to 1 decimal for display only.
The ratios were calculated using the unrounded values,
then rounded in turn to 1 decimal for display.

See Appendices A and F for the definition of Hospital Service Areas.

Population estimates are for July 2024, from the Census Bureau
(see Note 4 and Note 7).

Each physician is counted in main specialty and setting, independently (Note 8). Reported settings may refer to provider setting or patient setting.

General Telemedicine: The portion of the work of these physicians that is related to Vermont patients could not be determined, thus full-time equivalents (FTEs) are not computed, for telemedicine - as well as all radiologists and pathologists, since many of them work remotely.

Telemedicine to Specific Sites: Some physicians reported working a specific number of hours remotely providing care for a specific Vermont practice. They are counted where other telemedicine is not.

In this table physicians may be counted more than once (Note 4).
Pathologists, radiologists, and telemedicine are excluded from this table (Note 3).
Telemedicine and providers with less than 0.1 FTEs have been excluded from
2022 data in this comparison to match the change in methods of reporting for 2024.
These numbers will differ from published tables in 2022 report where telemedicine
and low hour physicians were included.

Table 47 -- VT Physicians, 2022 vs. 2024
Primary Care Physician Full Time Equivalents (FTEs) and
Ratio to Population, by County, in 2022 and in 2024

Windham County	28.7	45,842	62.5	30.3	45,627	66.4	3.8
Windsor County	28.4	58,142	48.8	25.8	57,697	44.8	-4.0

Only primary care physicians are included in this table.

An FTE is defined as 40 (or more) hours/week, 48 weeks/year.

The FTEs are rounded to 1 digits for display only.

The ratios were calculated using the unrounded values.

Physicians with less than 4 hrs per week have been removed from the 2022 values to match the change in process for this report - this reduced the total FTEs by 1 compared to the 2022 report.

Orange County	17.6	28,859	60.9	14.2	30,050	47.3	-13.6
Orleans County	15.4	27,082	56.7	11.9	27,726	42.9	-13.8
Rutland County	37.5	60,086	62.5	30.2	60,198	50.2	-12.3
Washington County	45.0	58,998	76.3	29.4	59,844	49.2	-27.1
Windham County	37.6	43,714	86.0	30.3	45,627	66.4	-19.7
Windsor County	43.1	56,014	77.0	25.8	57,697	44.8	-32.2

Only primary care physicians are included in this table.
An FTE is defined as 40 (or more) hours/week, 48 weeks/year.
The FTEs are rounded to 1 digit for display only.
The ratios were calculated using the unrounded values.
Telemedicine and providers with less than 0.1 FTEs have been
excluded from 2014 data in this comparison to match the change
in methods of reporting for 2024. These numbers will differ
from published tables in 2014 report where telemedicine and low hour
physicians were included.

Appendices

Appendix A. General Notes and Terms

Definition of Active Physician

A physician who was relicensed for the period 2024-2026 in Vermont, and who provided patient care hours in Vermont as reported in the survey. Locum tenens are excluded except where noted. (Locum tenens practitioners fill positions on a temporary basis when practitioners are on sabbatical, vacation, or absent for an extended period. Unlike in previous reports, in this report those who said they have worked in the same position more than a year are not considered locum tenens.)

Physicians not represented in these tables

Only active physicians are reported. Those who hold a Vermont license but are not actively in practice in Vermont are excluded from all tables. Physicians who were licensed in Vermont for the first time in late 2024, and were not required to relicense at this time, are not included. Residents, clinical fellows, and research fellows are excluded from all tables. Pathologists, radiologists and telemedicine are excluded from tables that list hours or FTEs. Beginning in this 2024 report, physicians with less than 4 hours of patient care and those practicing general telemedicine are also excluded from most of the report tables.

Telemedicine

Some physicians provide services remotely from out of state to Vermont patients, and the portion of their work related to Vermont patients could not be determined. Therefore, hours are not reported, and full-time equivalents (FTEs) are not computed, for telemedicine - as well as all radiologists and pathologists, since many of them work remotely. Some physicians reported Vermont-specific telemedicine, meaning that they worked a specific number of hours on contract remotely providing care for a specific Vermont practice. They are counted where other telemedicine is not, since we could compute Vermont FTEs for them.

Locum Tenens

Locum tenens practitioners fill positions on a temporary basis when practitioners are on sabbatical, vacation, or absent for an extended period. Work done on a locum tenens basis for less than a year is not counted in this report, other than in the tables on pages 59-63. Beginning with the 2018 report, those who reported working in the same locum tenens position for more than a year are counted. Some physicians worked partly as locum tenens and partly not - their non-locum-tenens work is reported here.

Specialties

Physicians reported their specialties by picking from a predefined list (see Appendix D), although they could also write in a specialty if not in the list. For the purposes of these tables the detailed specialties were grouped in the following way:

Primary Care

- Family Practice includes general practice, family practice, and geriatric medicine. Family Practice in an urgent care setting was not considered primary care.
- Internal Medicine includes general internal medicine and geriatric internal medicine. Internal Medicine in a hospital setting was not considered primary care.
- Obstetrics and Gynecology (Ob/Gyn) includes physicians who reported a solely gynecological practice or a solely obstetrical practice, along with those who reported working in both obstetrics and gynecology.
- Pediatrics includes pediatric primary care as well as adolescent medicine.

Specialty Care

- Anesthesiology
- Emergency Medicine
- Dermatology
- Hospitalist includes those who chose the hospitalist specialty (not by setting)
- Internal Medicine includes several internal medicine subspecialties
- Neurology
- Ophthalmology
- Pathology (excluded from tables reporting FTEs as noted)
- Psychiatry
- Radiology (excluded from tables reporting FTEs as noted)
- General Surgery
- Orthopedic Surgery
- Other Surgery includes most other surgical specialties, such as vascular surgery, abdominal surgery, colon and rectal surgery, neurological surgery, oral and maxillofacial surgery, pediatric surgery, surgical critical care, and thoracic surgery.
- Neurology
- Urgent Care
- Urology

Other Specialties includes all specific specialties that are not included in the specialty groups listed above. (In some tables where there is no room to list all the groups separately, the "other" category in those tables includes some of the groups listed separately above.)

Hospitalists

Hospitalists provide general care to hospitalized inpatients. In the past Hospitalist was listed as a practice setting, but not as a specialty. Since the 2010 census “Hospitalist” was included in the list of specialties, and since the 2016 census it was no longer listed as a practice setting. A few physicians reported general practice or general internal medicine in a hospital inpatient setting, this may be similar to hospitalists but is counted separately.

Determination of a physician’s main specialty

A physician’s “main” specialty is the specialty group in which the physician works the most hours. In case of a tie (equal hours in two specialties), the specialty group listed first in the above list is chosen. This has the effect of choosing primary care over specialty care, and more common specialties over the “other specialties” category, in case of a tie.

Hospital Service Areas

Hospital Service Areas (HSAs) are based on inpatient discharges (1997-2001) where the diagnosis indicates the need for immediate care. Unlike previous versions of HSAs, all Vermont towns have been assigned to a Vermont HSA. The name of each HSA is based on the most populous town in that service area. See Appendix F for a map of the HSAs.

Local Health Districts

The Local Health Districts are groups of towns whose residents receive services through the local District Office of the Vermont Department of Health. See Appendix G for a map of the Local Health Districts.

Determination of a physician’s main County (or other area)

Main county is the county in which the physician practices the greatest number of patient care hours. Similarly for main health care area, or district.

Definition of Full Time Equivalent (FTE)

Reported hours per week were prorated based on the number of work weeks per year. Full time is defined as 40 patient care hours per week or more, for 48 weeks per year. Reported hours per week were adjusted to an annual average, based on a standard of 48 weeks per year. E.g., if 52 weeks were reported, the hours were multiplied by 52/48. A physician reporting more than 40 (adjusted) hours per week is defined as one FTE regardless of the number of hours. See the following examples:

	Weeks	Hours	FTE	
Example 1:	Specialty 1	48	10	0.25
	Specialty 2	48	10	0.25
	Total		20	0.50

Example 2:	Specialty 1	52	10	0.27
	Specialty 2	52	10	0.27
	Total		20	0.54
Example 3:	Specialty 1	48	40	0.80
	Specialty 2	24	20	0.20
	Total			1.00

In Example 1, the physician works half-time and has hours split equally between 2 specialties. The second example is similar except for the number of weeks being more than 48 so the FTEs are adjusted upwards. In Example 3 the physician provides an average of 40 hours per week year round (40 adjusted hours) in specialty 1, and another 20 hours of work in specialty 2 in each of only 24 weeks per year (10 adjusted hours). This is calculated as 1.0 FTE total for the person, apportioned between the two specialties by the adjusted hours.

Numerical precision

Most numbers are displayed in finite precision in that they are individually rounded. Thus, some rows or columns of numbers may not add exactly to the displayed total (to the last, rightmost digit). This applies to FTEs, percentages and hours, for example, whether the numerals displayed are decimal or whole numbers. Counts of physicians are exact integers, however, and should add up to displayed totals.

Tables displaying each physician in a single cell vs. multiple-count tables

Many of the tables contain information that is individual-based, and each physician is represented in only one cell in the table. Those with more than one specialty, or more than one practice site or setting, are counted only in the row and column representing their main specialty, main setting, or main practice location.

Other tables count some physicians in more than one row or column, e.g., in every county the physician works in, and thus the numbers in the “total” row or column may be less than the sum of the rows or columns. Wherever this is the case, it is stated in the notes specific to that table.

Appendix B. Notes for specific tables (to be referred to by number)

1. Calculation of Age

Ages were calculated as 2024 minus the year of birth, i.e., as of 12/31/2024. Tables that refer to physicians' age in 2022 are based on ages as of 12/31/2022.

2. “Main” Specialty And “Main” County (Or Other Geographical Area) Determined Independently

Each provider's main practice specialty and main county of practice are determined independently, and are used to determine the row and column in the table in which the provider will be counted. Secondary specialties and counties are ignored. A provider may practice their main specialty primarily in a county other than their main overall county, but that is ignored in this table.

3. Table Excludes Pathologists, Radiologists and Telemedicine

Pathology and radiology specialties are excluded from this table. We are no longer able to determine total radiology FTEs because much of the radiology work is now done remotely by out-of-state radiologists, and the portion of their total time spent on Vermont patients is unknown. Hours in active pathology practice are not part of our definition of direct patient care. Moreover, some of the pathology work is done via telemedicine. Thus pathologists are not included in any table quantifying patient care as FTEs. Telemedicine has been increasingly reported for other specialties as well, and if no specific Vermont practice can be determined, those records are deemed general telemedicine and will not be included in tables reporting hours or FTEs.

4. Notes Regarding Tables Listing Provider Full Time Equivalents (FTE) And Hours By Area (e.g., County), or by Setting:

These tables count each provider who provides primary and/or specialty care in that county or area. The same provider may be counted in more than one area, or more than one specialty.

Because of this inclusive approach taken in tallying providers across practice locations and specialties, the numbers in the “Total” rows and “Total” columns will generally be less than the sum of the individual rows and columns. This applies to state totals which sum the county-level counts, and the “Total” of combined specialties. Unlike the totals for the counts of providers, however, the numbers listed in the “Total” rows and “Total” columns for the “FTE” and “Hours” statistics do equal the sums of the individual items (except for rounding errors).

See also Note 15 regarding the calculation of weekly hours and FTEs.

(notes 5 and 6 skipped intentionally)

7. Population Estimates

The population estimates used in this report are from the Census Bureau, with the “2024” populations as estimated for July, 2024.

8. “Main” Setting and “Main” Specialty determined independently

Each provider’s main practice setting and their main specialty are determined independently, and are used to determine the row and column in the table in which the provider will be counted. Secondary settings and specialties are ignored. A provider may practice their main specialty primarily in a setting other than their main overall setting, but that is ignored in this table.

(note 9 skipped intentionally)

10. Notes Regarding Availability of Care

The survey queried physicians on whether they accept new patients, and whether they participate in Medicaid and Medicare, separately for each site where they practice.

In the first table depicting availability of care by specialty, each provider is counted once, in his or her main specialty. A provider is counted as accepting new patients if they accept new patients at any site, and as participating in Medicaid or Medicare if they participate at any site.

In the second table, depicting FTEs, availability of care by specialty, each site of each provider is counted, pro-rated by the fractional FTEs computed for each site.

In the table depicting availability of care by county, the unit of counting is neither the provider nor the site, but rather the provider - site association. More than one response per provider is tabulated if that provider reported working at more than one site. Each site of each provider is tabulated under the (main) specialty reported for that site, whether or not that is the provider’s overall main specialty.

The following specialties are excluded from the “accept Medicare patients” statistic (both numerator and denominator): all pediatric specialties and subspecialties (including adolescent medicine), maternal and fetal medicine, reproductive endocrinology, child neurology and child and adolescent psychiatry.

11. Office Settings Only

Only ambulatory and office-based settings are counted in this table. For 2024 the following settings are included: Solo practice, group practice (single- or multi-specialty), community clinic (including mental health agencies), home health, and hospital outpatient including those who indicated both inpatient and outpatient work. This is not exactly comparable to

previous surveys, as the list of settings has changed. These differences did not seem to make a large difference in the computed percentages accepting new patients.

12. Geographical Regions

States were grouped into the following regions:

New England: ME, NH, VT, MA, CT, RI

Other Northeast: NY, NJ, PA

South: DE, MD, DC, VA, WV, NC, SC, GA, FL, KY, TN, AL, MS, AR, OK, LA, TX

Central: OH, IN, IL, MI, WI, MN, IA, MO, ND, SD, NE, KS

West: MT, WY, CO, NM, ID, UT, AZ, NV, WA, OR, CA, AK, HI

13. Residency by Region

Since the 2016 census, we have only collected information from one residency for each physician. Therefore, the percentages for all the regions within a row should not add up to more than 100. Information on multiple residencies is absent, though.

14. Determining UVM Training

In a few cases residency information is available, or school information is available, but not both. These cases are included in the last section of the table (“Doctors with Any Known Training”) along with the doctors for whom both school and residency information are known.

15. Patient Care Hours

"Full Time" is defined here as 40 (or more) hours of direct patient care per week in Vermont, 48 weeks per year. Average weekly hours (and FTEs), based on 48 weeks per year, were computed for providers who reported working more or less than 48 weeks per year. This results in fractional hours, and rounding errors may affect the displayed hours. Thus, in some cases the hours in the "total" columns differ, usually by one hour, from the totals of the hours displayed in the detail columns. Some providers provide additional care (not listed here): outside Vermont, or as locum tenens, or do other types of work besides direct patient care, e.g., administration, teaching or research.

Appendix C. 2024 Census

Vermont Physician Census 2024

Identification

- 1) First Name* _____
- 2) Middle Name (if any) _____
- 3) Last Name* _____
- 4) Vermont Physician License Number* _____

Training

- 5) Please enter the two letter code for the state where you completed your Medical (MD or DO) education: _____
- 6) If completed outside the U.S. or Canada, please specify country:

- 7) Please enter the two letter code for the state where you completed your first residency, if any: _____
- Year of Practice Start
- 8) What YEAR did you start practicing as a Physician (or resident)? (if never, leave blank)

- 9) What YEAR did you start practicing as a Physician in Vermont? (if never, leave blank)

Activity Status

- 10) Please check all of the boxes that describe your practice as a Physician:*
- ☐ Active in clinical practice in Vermont
- ☐ Active in clinical practice outside Vermont
- ☐ Active in clinical practice via telemedicine (either by phone or video)
- ☐ Practicing medicine, but not providing direct patient care
- ☐ Actively working in a field other than medicine
- ☐ Not currently working
- ☐ Retired

If any selection is "Active in clinical practice in Vermont", census will skip to question 18.

If any selection is “Active in clinical practice via telemedicine”, census will skip to question 14.

If neither highlighted choice is selected, census will continue to question 11 to verify not currently active in Vermont.

Verify

11) Please verify that you do NOT provide patient care as a physician in Vermont:

- ☐ That is correct
- ☐ Oops, that is not what I meant

If “Oops, that is not what I meant” is selected, census will skip to question 18.

If “That is correct” is selected, census will continue to Not active section (questions 12 and 13) and then skip to demographics, question 84.

Not active

12) How many years has it been since you provided clinical or patient care?

- ☐ less than 2 years
- ☐ 2 to 5 years
- ☐ 5 to 10 years
- ☐ more than 10 years
- ☐ I have never provided clinical or patient care

13) Do you plan to start (or resume) clinical practice in Vermont within the next 12 months?

- ☐ yes
- ☐ no

Telehealth/telemedicine

14) Which statement best describes your telehealth/telemedicine work?*

- ☐ I serve Vermont primarily, either by location or population, even if I serve a few other states (for example, bordering or near VT).
- ☐ I serve multiple states, either by location or population

15) Please briefly describe your telehealth practice:*

16) Giving your best estimate, what percentage of your work is telehealth/televisits?

- ☐ 0-25%
- ☐ 26-50%
- ☐ 51-75%
- ☐ 76-100%

17) In addition to the telehealth practice described above, I have a VT-specific practice as well:

☐ No

☐ Yes

Census skips to demographics page (question 84) unless question 14 is answered "I serve Vermont primarily..." or question 17 is answered "Yes".

Currently active

18) Do you plan to retire, or leave your principal Vermont clinical practice, within the next 12 months?

☐ Yes

☐ No

19) Do you plan to reduce your patient care hours in Vermont within the next 12 months?

☐ Yes

☐ No

First Vermont practice site

The following questions are about your direct patient care practice sites. If you have more than one location in Vermont where you practice, please enter the information on a separate page for each location. This page is for the first (principal) site. Additional pages will appear later as needed. If practicing in two settings within the same town, enter as separate "sites".

Practice Site 1 (your principal Vermont clinical practice site):

20) Please choose the best description of your practice at this site:*

☐ I offer face to face visits to patients of this specific Vermont practice

☐ I practice telemedicine from this Vermont site, patients may be anywhere

☐ I practice telemedicine from outside Vermont, some patients are in Vermont

21) Vermont town name (not a mailing address):* _____

22) ZIP code of practice location (not a mailing address):* _____

23) Phone number of this practice location (the public access number):* _____

24) Practice name: _____

25) Street Address: _____

26) Who owns this practice?

☐ University of Vermont Health Network

☐ Dartmouth-Hitchcock Health

☐ Other hospital owned, not affiliated with above

- ☐ Federally Qualified Health Center
- ☐ CMS Certified Rural Health Clinic
- ☐ Physician/privately owned - direct care
- ☐ Physician/privately owned – single site
- ☐ Physician/privately owned – multiple sites
- ☐ Other - please specify: _____ *

27) Choose the one description that best fits your practice setting at this site:*

- ☐ Office-based solo physician practice
- ☐ Office-based single-specialty physician group
- ☐ Office-based multi-specialty physician group
- ☐ Hospital emergency department
- ☐ Hospital inpatient department
- ☐ Hospital outpatient department
- ☐ Hospital in- and out-patient
- ☐ Urgent Care / Walk in
- ☐ Federal / community health center (FQHC/RHC/CHC)
- ☐ Community Mental Health Center
- ☐ Home health setting
- ☐ Nursing home / extended care facility
- ☐ Hospice care
- ☐ Clinic serving a School or college
- ☐ Occupational health setting
- ☐ Free Clinic
- ☐ Other - please specify *: _____ *

28) Do you work here as locum tenens, on a contract that is for less than a year? (A locum tenens is an employee contracted through a staffing firm or is a self-employed contractor)

- ☐ Yes
- ☐ No

This question is hidden unless question 28 is answered "Yes".

Have you been working here for more than a year now?

- ☐ Yes
- ☐ No

The following questions are about patient care:

29) Enter the number of weeks per year during which you provide any patient care here: (48 weeks per year is considered "year-round".)* _____

30) Main specialty at this site:

31) If you selected "Other specialties, Not listed", please describe:

32) Hours per working week in patient care in main specialty here: (Patient care includes diagnosis, communication, treatment and clinical reporting.)* _____

33) Secondary specialty at this site (if any): _____

34) If you selected "Other specialties, Not listed", please describe:

35) Hours per working week here in patient care in secondary specialty, if any: _____

36) Tertiary specialty at this site (if any): _____

37) Hours per working week in patient care in tertiary specialty, if any: _____

38) Please answer each of the following questions about *your work at this site* providing patient care:

	yes	no	n.a.
I will accept new patients here	()	()	()
I participate in Medicaid here	()	()	()
I will accept new Medicaid patients here	()	()	()
I participate in Medicare here	()	()	()
I will accept new Medicare patients here	()	()	()

39) If there is anything else you want to tell us about your practice at this site please enter it here: _____

Second practice site

40) Do you have more than one practice site in Vermont?

() yes

() no

If answer is yes, site questions are repeated for up to three sites, otherwise census goes to demographics page, question 84.

Additional Vermont practice sites

82) Do you have more than three practice sites in Vermont?

() Yes

() No

83) Please describe your work at additional sites beyond the three you entered above, briefly, including locations, specialties and hours:

Demographics

We understand that gender, race, and ethnicity identities and expressions are sensitive and personal matters. In health care however, we also know that these identities can have wide-reaching impacts, both on providers and patients. To better understand the diversity of the workforce and ensure we address the needs of all Vermonters, please let us know the following demographic information. We understand that the answer choices may not accurately represent your identity. (All these questions are optional, if you would prefer not to answer.)

84) Gender

☐ Male

☐ Female

☐ I prefer to self describe:: _____

☐ I prefer not to answer

85) Which of the following best describes your race and ethnicity? (Please check all that apply):

☐ Abenaki or another Native American or Alaska Native identity

☐ Asian or Asian American, for example: Chinese, Asian Indian, Nepalese, or Vietnamese

☐ Black or African American

☐ Hispanic or Latino, Latina, or Latinx, for example: Mexican, Venezuelan, or Brazilian

☐ Middle Eastern or North African

☐ Native Hawaiian or another Pacific Islander

☐ White or European American

☐ An additional race or ethnicity, please share:: _____ *

☐ I prefer not to answer

Final comments

The results of these censuses have allowed us to monitor changes in Vermont's medical workforce, and reports based on these censuses are available [on the Vermont Department of Health website](#). The findings from these censuses have been used in the Community Assessments, the State Health Plan, the Health Resources Allocation Plan and the designation of medically underserved areas.

86) Thank you. If there is anything else you want to tell us about your practice or this census, please enter it here: _____

87) If you want to be sent an email confirming this census entry, please enter your email address here (optional): _____
