

# Healthy Vermonters 2030 Indicators

These indicators represent data for the whole population of Vermont (unless otherwise specified). When the indicators are published in our public dashboards they will be disaggregated by geographic and demographic variables whenever possible.

As a department we are committed to collecting, sharing, and using data in a way that represents all people. However, all data comes with limitations, and these are only a representation of the health of people in Vermont. We can never tell the full story with data alone.

We also recognize that some of this data comes from institutions which have caused harm due to policies and practices leading to data underrepresentation and misrepresentation of some groups. Vermont is working to implement more equitable data practices, encourage federal agencies to improve their data collection practices, and create and share context with our data to foster more holistic and beneficial interpretation.

Indicator Name	Scorecards
% of adults age 18 and older who currently use cigarettes, e-cigarettes, or smokeless tobacco	Substance Use and Tobacco
% of adults age 18 and older who didn't engage in leisure time physical activity in the past month	Healthy Behaviors and Prevention
