

Monthly Opioid Morbidity and Mortality Report

Summary of 2024 Opioid Deaths (to date):

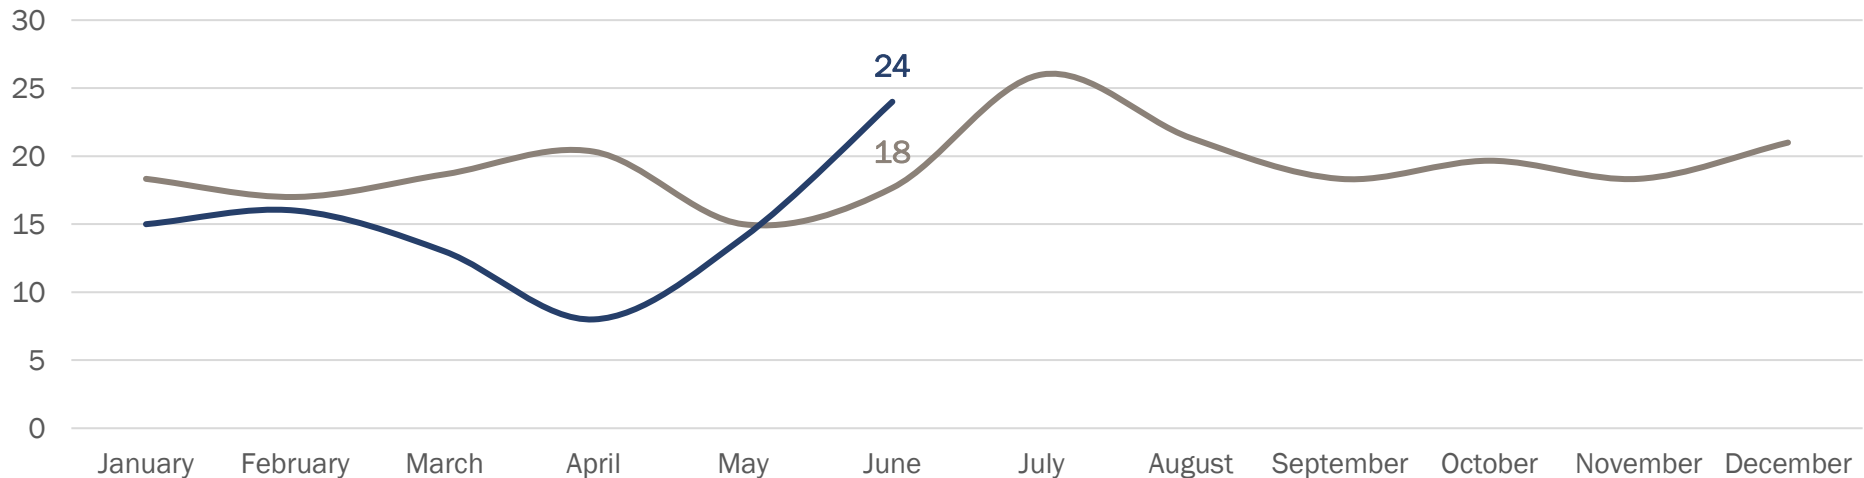

September 9, 2024

As of the end of June, there have been 90 opioid-related accidental and undetermined deaths among Vermont residents. The number of opioid deaths is lower than the three-year average through June. Caledonia County currently has the highest rate of opioid deaths (22.9 per 100,000 residents); this rate is statistically similar to Vermont overall (13.9 per 100,000 residents).

The number of Vermonters dying by opioid overdose was higher in June than in previous years.

Opioid deaths in **2024** and **3-year averages** by month among Vermont residents*

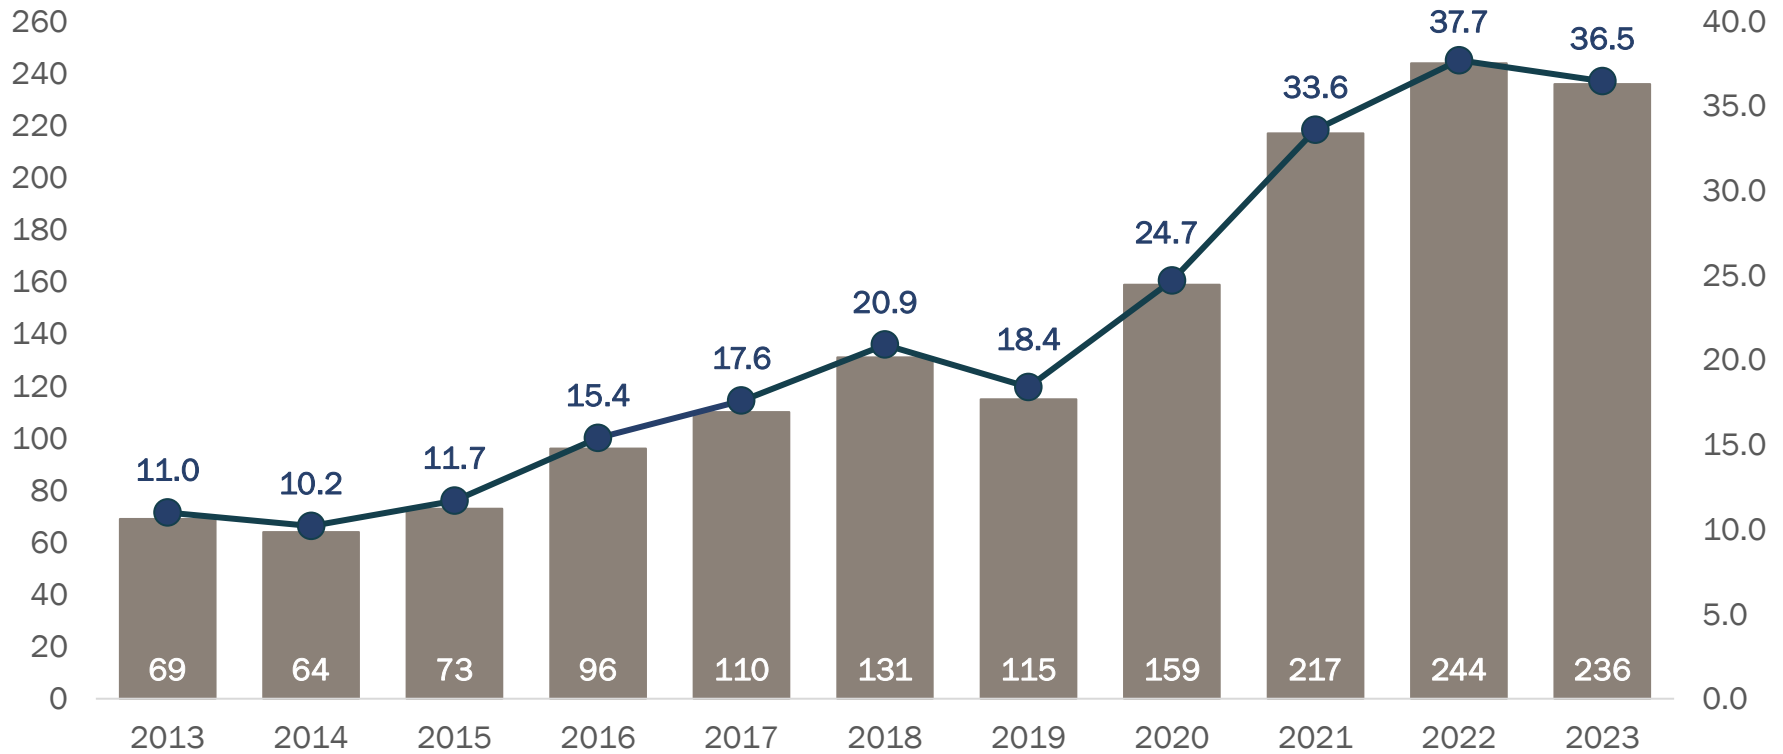

Source: Vermont Vital Statistics, 2021-2024. All data from 2023 and 2024 are considered preliminary.

*3-year averages are calculated using the years 2021 to 2023.

Please note there is an 8-week lag in reporting opioid overdose deaths. An 8-week lag minimizes the changes in numbers posted. Opioid deaths through the end of June are included in this report. There are **4** pending death certificates in February 2024, **3** pending death certificates in March 2024, **4** pending death certificates in April 2024, **6** pending death certificates in May 2024, and **12** pending death certificates in June 2024.

The number and rate per 100,000 of opioid-related deaths over the past 10 years.

*2023 data is preliminary and subject to change. There are 0 pending death certificates in 2023.

Missing County of Residence	0	0	0	1	0	0							1	0
VT Resident Deaths	15	16	13	8	14	24							90	107
Vermonters in VT	15	15	12	7	11	23							83	
Non-Vermont Residents	2	1	0	0	2	1							6	
Pending Death Certificates**	0	4	3	4	6	12							29	

Note: 2024 data is preliminary and subject to change.

*3-year averages are calculated through June.

**The number of pending death certificates are deaths that have not been assigned a cause of death in Vermont Vital Statistics.

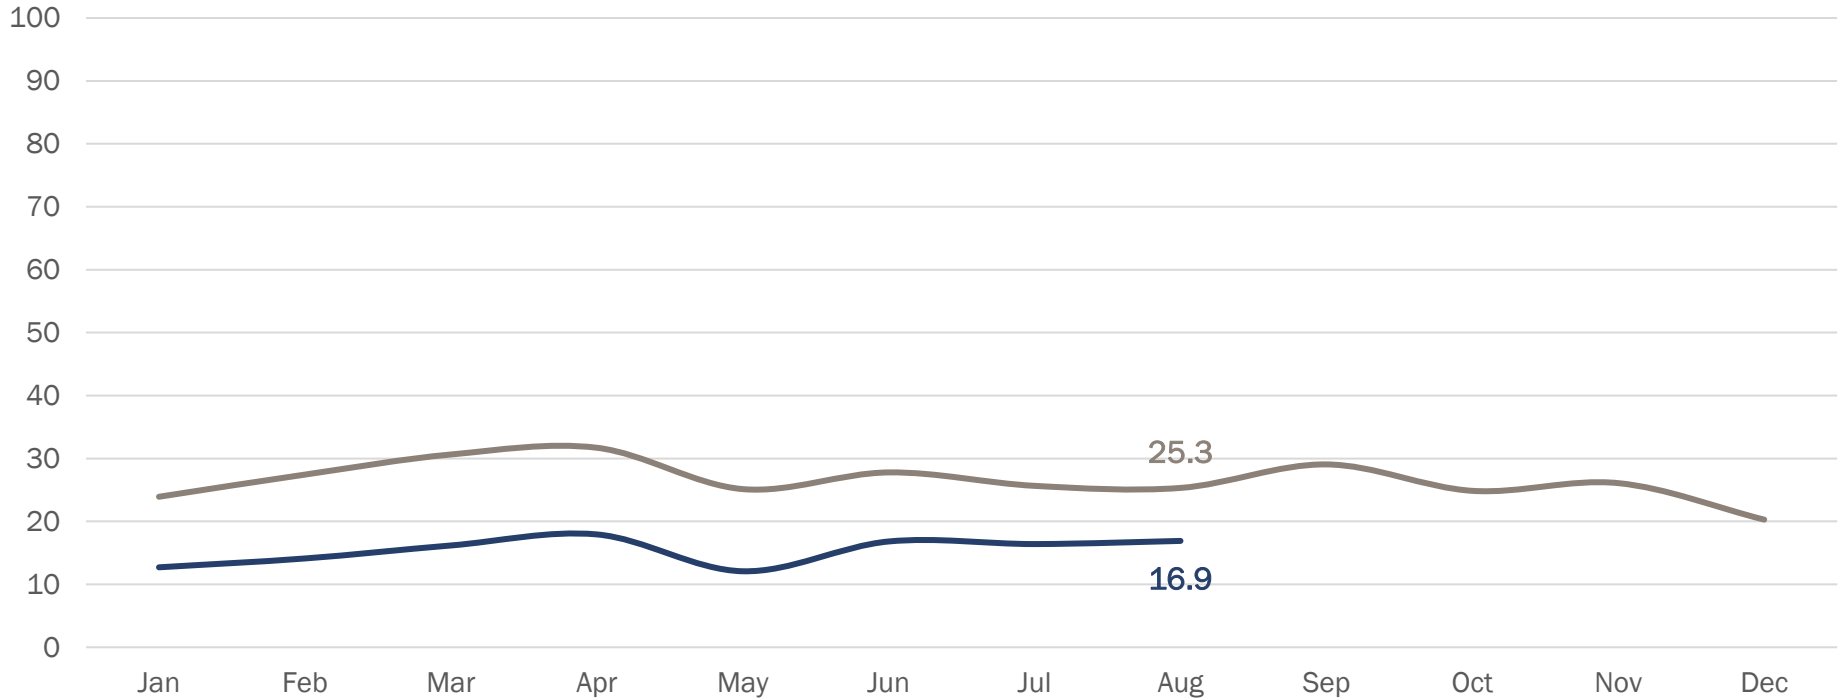

Death certificates that are pending are not necessarily opioid-related deaths.

Syndromic Surveillance

As of September 9th, emergent care visit rates for opioid overdose in 2024 have been lower than the 3-year average.

Rate of Emergent Care Visits for Opioid Overdose by Month

2024 and 3-year Average Rates of Opioid Overdose Visits per 10,000 ED and Urgent Care Visits*

Source: Electronic Surveillance System for the Early Notification of Community-based Epidemics, 2021-2024.

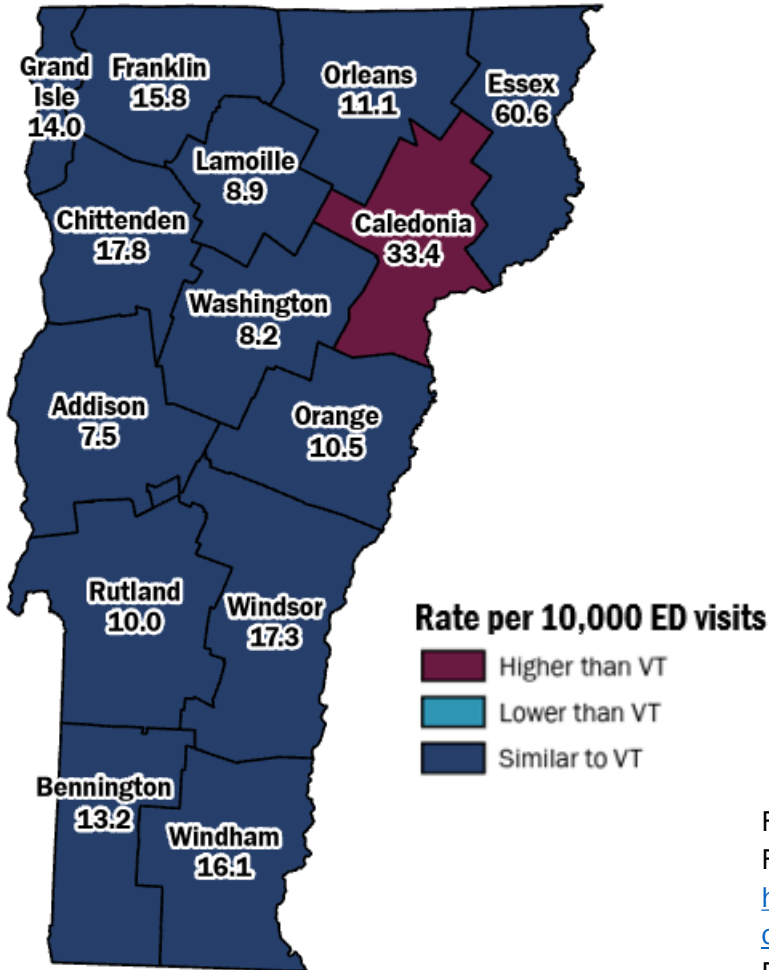

*3-year averages are calculated using the years 2021 to 2023.

Opioid overdose is determined using the patient's chief complaint and/or discharge diagnosis.

Syndromic Surveillance

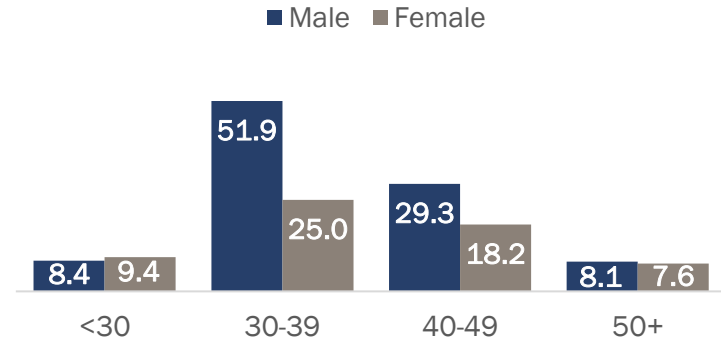

2024 ED visit rates for opioid overdose by county of residence compared to statewide rate (14.6), through June

ED Visit Rates per 10,000 visits.

2024 ED visit rates for opioid overdose by sex and age group, through June

ED Visit Rates per 10,000 ED visits

Summary of 2024 Opioid Overdose-Related ED Visit Data:

- As of September 9th, emergent care visit rates for opioid overdose in 2024 have been lower than the 3-year average.
- The rate of ED visits for opioid overdose is highest among males aged 30-39.
- The rate of opioid-related ED visits in Caledonia County (33.4 per 10,000 visits) is statistically higher than the statewide rate (14.6 per 10,000 visits).
