

Vermont Diabetes Profile

Chittenden County | December 2025

Diabetes is a chronic condition which, like many chronic conditions, is linked to lifestyle, environment, access to equitable care, and genetic factors. Lifestyle, often driven by social determinants of health, such as poor diet, access to healthy and affordable food, physical inactivity, and tobacco use, can increase the risk of developing diabetes and experiencing poor health outcomes. This document presents data on diabetes among people who live in **Chittenden County**.
