

VXU UPDATES

The Immunization Registry team is excited to announce new improvements to automatic HL7 (VXU) messaging, planned for spring 2026. There will be additional communications to follow regarding this change in the coming weeks and months.

Automatic Updates, Edits, and Deletions

The Immunization Registry will accept updates, edits and deletions made in a practices EHR. Users will no longer need to access the Registry directly to make changes to submitted messages.

Vaccine National Drug Codes (NDC)

The Vermont Department of Health Immunization Registry will require all NDC's associated with administered vaccines to be sent with all VXU messages.
