Introduction

The intercensal population estimates for 2011-2019 are based on the 2010 and 2020 Census counts and replace the postcensal estimates which have been published in the past decade. These estimates are produced for the towns and counties of Vermont, and the age-sex distribution of the counties. The intercensal estimates are typically released earlier in the decade, but the COVID-19 pandemic significantly delayed and complicated the processing of 2020 Census data.

The intercensal estimates correct for what was a general under-estimation of the Vermont population in the previously published post-censal estimates. The intercensal estimates also smooth out some of the larger year-to-year fluctuations seen in the earlier post-censal estimates. A particular correction of note, the post-censal estimates significantly over-estimated the population of Newport Town due to a data mishap which led to over-estimating the number of housing units in Newport Town. This data problem persisted into the post-censal estimates for 2021-2024 but should be corrected in time for the 2025 estimates which will be released later this year.
