

What to Know About Vaccines for School-Age Children

It's normal to have questions about vaccines. Here's what to know:

- Vaccines help protect school-aged children from serious illness, including diseases that can spread quickly in group settings
- They also help protect other students and the broader community
- Vermont's vaccine recommendations are reviewed regularly and updated based on the latest science
- Schools have vaccine requirements to help keep children safe
- Most Vermont families choose to vaccinate as part of routine care
- Vaccines are widely available and covered by insurance

Where to find reliable vaccine information:

Talk with your child's doctor or visit **HealthyChildren.org** (@HealthyChildrenAAP), a resource from the American Academy of Pediatrics, for research-based vaccine information.
