Acknowledgment

We gratefully acknowledge the contributions of the medical records staff, health care providers and midwives, funeral directors, lawyers, and court clerks for their help in collecting and providing us with this data.

We also recognize the town and city clerks, who are our local registrars. Without them, these analyses of Vermont's vital statistics would not be possible.

If you need help accessing or understanding this information, contact VitalRecords@vermont.gov.

Figure 1. Vermont County Map

The Vermont Vital Statistics System

Statewide vital registration began in Vermont in 1857, when the General Assembly passed a bill requiring that towns report to the Secretary of State all births, marriages, and deaths occurring in their jurisdiction. Prior to that time, some towns kept such records to resolve questions concerning the distribution and inheritance of property. Vital records, particularly death records, gradually became recognized as an important tool in studying the location and spread of epidemics. In 1896, the Legislature transferred responsibility for the vital statistics system to the newly formed Board of Health, the forerunner of the Vermont Department of Health. The Department of Health has retained this responsibility to the present day.

The Vermont vital statistics system monitors the following vital events: births, deaths, marriages, divorces and dissolutions, fetal deaths, and abortions. Each type of vital record follows a different path before being used to produce the statistics published here.

Births: When a birth occurs, the physician, midwife, or other birth attendant is required to report the birth within five business days. For hospital births, it is usually the medical records staff that enters the birth information into the Electronic Birth Registration System (EBRS). Once a birth record is completed in the Electronic Birth Registration System, it is registered, and the birth certificate is available for issuance by any town clerk in the state.

Deaths: Although a physician is responsible for completing the death certificate, the job may be, and often is, delegated to the funeral director. Most of the information needed to complete the death certificate is obtained from the family of the deceased; however, the physician must complete and certify the cause of death information. Once a death record is completed in the Electronic Death Registration System (EDRS), it is registered, and the death certificate is available for issuance by any town clerk in the state.

Marriages: When a couple wishes to marry in Vermont, they provide a town clerk with a completed application to complete the license. The couple takes the license to an officiant to solemnize the marriage. The officiant signs and dates the license and returns it to the town clerk. The town clerk records and files the certificate of marriage and sends a certified copy to the Department of Health.

Divorces and dissolutions: A record of divorce or record of civil union dissolution is submitted to the court as part of the divorce or dissolution proceedings. The court keeps the report until the decree becomes final, usually three months after the court hearing. When the decree is final, the court clerk signs the report and sends it to the Department of Health for filing.

Fetal deaths and abortions: Reports of fetal death and induced termination of pregnancy (abortion) are sent directly to the Department of Health by the physician, hospital, or clinic that performs the procedure. By law, these reports are for statistical purposes only, are not public records, and are destroyed after two years.

Introduction

The Department of Health also receives abstracts for Vermont resident births and deaths that occur in other states. This allows the Department to do statistical analyses of vital events involving Vermont residents, including events which occurred outside of the state. All vital records received are data entered and stored electronically, and data from births and deaths which occur in Vermont is transmitted to the National Center for Health Statistics to become part of a national database.

Explanatory Notes

1. The tables in this bulletin were derived from records of vital events filed at the Vermont Department of Health for calendar year 2024.
2. Rates are based on the 2024 population estimates produced by the United State Census Bureau.
3. Caution must be used in comparing rates due to the small population in Vermont and the small number of events recorded.
4. Comparisons are made to the total U.S. population.
5. Deaths included in this report are based on the year of death, or the year pronounced if the year of death is unknown.
6. Percentages presented in tables throughout this report may not add to 100% due to rounding.
7. The following is a list of Vermont's counties and the county abbreviations that are used in this bulletin.

County	Abbreviation
Addison	ADD
Bennington	BEN
Caledonia	CAL
Chittenden	CHI
Essex	ESX
Franklin	FRA
Grand Isle	GI

County	Abbreviation
Lamoille	LAM
Orange	ORG
Orleans	ORL
Rutland	RUT
Washington	WAS
Windham	WHM
Windsor	WSR

Introduction

8. The weight gain guidelines reflected in this report were taken from “Weight Gain During Pregnancy: Reexamining the Guidelines” Institute of Medicine, National Academies Press, 2009. The recommendations are as follows for singleton, full term births:

Pre-Pregnancy BMI	Recommended Weight Gain
Underweight: < 18.5	28 - 40 Pounds
Normal weight: 18.5 - 24.9	25 - 35 Pounds
Overweight: 25.0 - 29.9	15 - 25 Pounds
Obese: > 30.0	11 - 20 Pounds

Definitions, Rates, and Ratios

Abortion: The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a live-born infant or other than to remove a dead fetus, and which does not result in a live birth.

Abortion Rate: Number of resident abortions occurring in Vermont \times 1000, divided by the total resident women ages 15 to 44.

Abortion Ratio: Number of resident abortions occurring in Vermont \times 1000, divided by the total resident live births.

Age Adjustment: Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. In this report, rates are adjusted using the 2000 U.S. population distribution as the standard.

The computation formula is: The sum of (age-specific rate for each age group \times standard population in that age group) multiplied by 100,000 and then divided by the total standard population.

Age-Specific Death Rate: Number of resident deaths in a specific age group \times 1000, divided by the total resident population in a specific age group (using population estimates as of July 1).

Age-Specific Fertility Rate: Number of resident live births to mothers in a specific age group \times 1000, divided by the total resident female population in a specific age group (using population estimates as of July 1).

Introduction

Age-Specific Pregnancy Rate: Number of resident pregnancies to women in a specific age group $\times 1000$, divided by the total resident female population in a specific age group (using population estimates as of July 1).

Annulment: The invalidation or voiding of a marriage, or civil union, which confers on the parties the status of never having been married to each other.

Civil Union: A civil union is a legal relationship that provides for same-sex couples in Vermont all the benefits, protections, and responsibilities under law as are granted to spouses in a marriage. Civil unions became law on July 1, 2000, and were discontinued as of September 1, 2009, under the marriage equality act which legalized marriage between same sex partners.

Civil Union Rate: Total number of civil unions $\times 1000$, divided by the total resident population (using population estimates as of July 1).

Crude Birth Rate: Number of resident live births $\times 1000$, divided by the total resident population (using population estimates as of July 1).

Crude Death Rate: Number of resident deaths $\times 1000$, divided by the total resident population (using population estimates as of July 1).

Cumulative Row Percent: The total number of cases in the current column plus each previous column in each row, expressed as a percentage of all cases in that row.

Death: The permanent disappearance of any evidence of life at any time after live birth.

Divorce: The final legal dissolution of a marriage.

Divorce Rate: The sum of the number of divorces and annulments $\times 1000$; divided by the total resident population, (using population estimates as of July 1).

Dissolution: The final legal dissolution of a civil union.

Fertility Rate: Number of resident live births to women ages 15 to 44 $\times 1000$, divided by the total resident female population ages 15 to 44 (using population estimates as of July 1).

Fetal Death: A reportable fetal death is a death prior to the complete expulsion or extraction from the mother of a product of conception, which has passed through at least the 20th week of gestation or weighs more than 400 grams; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

Introduction

Fetal Death Rate: Number of resident fetal deaths \times 1000, divided by the total resident live births and resident fetal deaths.

Fetal Death Ratio: Number of resident fetal deaths divided by total resident live births.

Infant Death: Death occurring in the first year of life.

Infant Death Rate: Number of resident infant deaths \times 1000, divided by the total resident live births.

Live Birth: The complete expulsion or extraction from the mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles whether the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

Low Birth Weight: A baby weighing less than 2,500 grams (5 pounds, 8 ounces) at birth.

Low Birth Weight Percent: The number of live births weighing less than 2,500 grams divided by the total number of live births.

Marriage: Legally recognized union of two people. In Vermont statute, the word “marriage” means a civil marriage.

Marriage Rate: Number of civil marriages \times 1000, divided by the total resident population (using population estimates as of July 1).

Month Prenatal Care Began: Calculated from the date of the first prenatal visit and the gestational age of the newborn based on the obstetric estimate of gestation. For calculation details, refer to:

[Birth Edit Specifications for the 2003 Revision of the U.S. Standard Certificate of Birth.](#)

Natural Increase: Occurs when the number of births is greater than the number of deaths.

Neonatal Death: Death of a live-born infant before the infant becomes 28 days old (up to and including 27 days, 23 hours, 59 minutes from the moment of birth).

Neonatal Death Rate: Number of resident neonatal deaths \times 1000, divided by the total resident live births.

Occurrence: The place where the event occurred.

Introduction

Perinatal Death: A fetal death or a death occurring before the infant becomes seven days old (up to and including six days, 23 hours, 59 minutes from the moment of birth).

Perinatal Death Rate: Number of resident perinatal deaths \times 1000, divided by the total resident live births and resident fetal deaths.

Plurality: The number of fetuses delivered live or dead at any time during a pregnancy.

Pregnancy Rate: Number of resident pregnancies in women ages 15 to 44 \times 1000, divided by the total resident female population ages 15 to 44.

Residence: The usual place of residence for the person to whom the event occurred. For births and fetal deaths, residence is defined as the mother's usual place of residence.

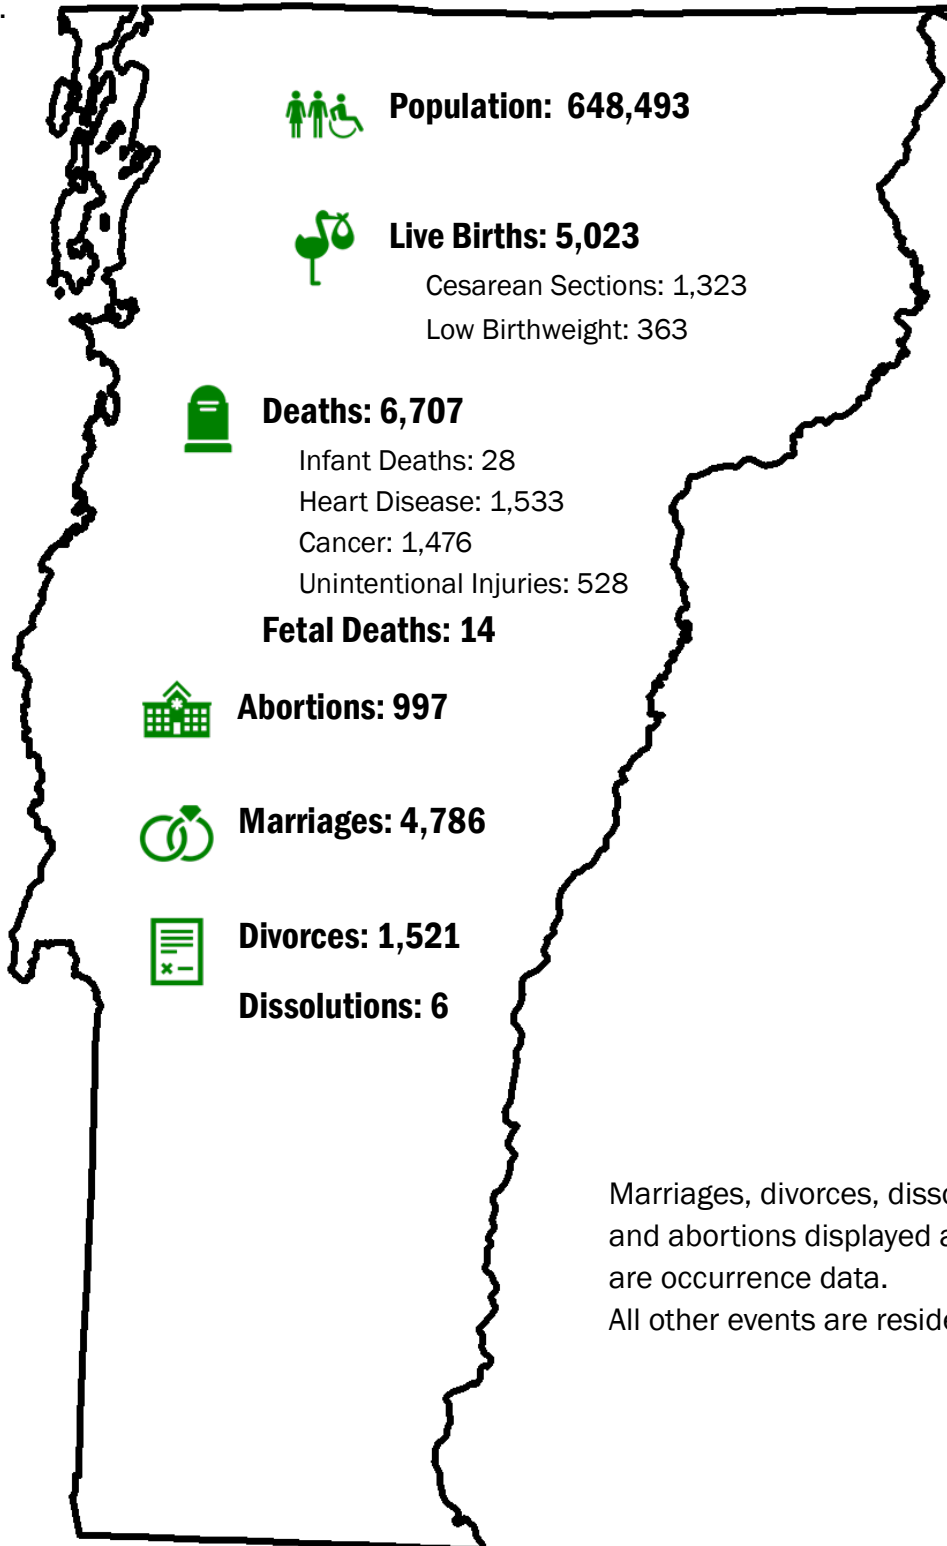

Row Percent: The number of cases in each row expressed as a percentage of all cases in that row.

Weeks of Gestation: The number of weeks elapsed between the first day of the last menstrual period and the date of delivery. The clinical estimate of gestation is used for tabulations in this report.

Summary and Population

Figure 2. Vermont Vital Events for 2024

9.

Marriages, divorces, dissolutions and abortions displayed above are occurrence data. All other events are resident data.

Summary and Population

Summary Statistics

Occurrence statistics include all events recorded in Vermont, including those involving visitors living outside Vermont. **Resident** statistics are limited to events involving people with legal residence in Vermont, including events occurring outside Vermont. In 2024, reports of births and deaths to Vermonters were received from 28 U.S. states, districts, and territories.

Summary of 2024 Vital Events

Event	Occurrence Number	Resident Number	Resident Rate
Births	4,847	5,023	7.7/1,000 population
Deaths	6,362	6,707	10.3/1,000 population
<i>Natural Increase</i>	N/A	-1,684	
Infant Deaths	23	28	5.6/1,000 live births
Fetal Deaths	18	14 ⁽¹⁾	2.8/1,000 live births and fetal deaths
Abortions	997	851 ⁽¹⁾	7.0/1,000 population (women ages 15 – 44)
Marriages	4,786	N/A	7.4/1,000 population ⁽²⁾
Divorces	1,521	N/A	2.3/1,000 population ⁽²⁾
Dissolutions	6	N/A	⁽³⁾

2024 Population: 648,493

⁽¹⁾ Does not include out-of-state occurrences.

⁽²⁾ Based on number of occurrences.

⁽³⁾ Rate is less than 1 per 1,000.

Summary and Population

**Table A-1. Vital Statistics Summary of Vermont, 1960 – 2024:
Vermont Resident Births**

Year	Population ⁽¹⁾	Live Births	Crude Rate ⁽²⁾	Fertility Rate ⁽³⁾	Low Birth Weight %
1960	389,881	9,279	23.8	126	7.0

2024	648,493	5,023	7.7	41.5	7.2

1. Population is the census population for those years when the census was taken and is the mid-year estimate for non-census years.
2. Rate per 1,000 population.
3. Rate per 1,000 women ages 15-44.
4. Value has been updated and differs from value presented in the 2023 report.

Summary and Population

**Table A-2. Vital Statistics Summary of Vermont, 1960 – 2024:
Vermont Resident Deaths**

Year	Population ⁽¹⁾	Deaths	Crude Death Rate ⁽²⁾	Infant Deaths	Infant Death Rate ⁽³⁾	Neonatal Deaths	Neonatal Death Rate ⁽³⁾
1960	389,881	4,382	11.2	223	24	173	18.6
1970	444,732	4,447	10.0	148	17.6	121	14.4
1980	511,456	4,588	9.0	85	10.9	48	6.2
1990	562,758	4,590	8.2	54	6.5	30	3.6

2011	626,431	7,372	62.8	19	3.1	209.6
2012	626,011	7,211	61.9	23	3.8	196.8
2013	626,630	7,147	61.4	25	4.2	192.6
2014	626,562	7,302	63.0	21	3.4	187.6
2015	626,042	7,027	60.8	16	2.7	187.8
2016	624,594	6,892	60.3	21	3.6	193.7
2017	623,657	6,663	58.5	16	2.8	175.4
2018	626,299	6,434	55.9	15	2.8	181.5
2019	623,989	6,310	55.1	19	3.5	173.5
2020	642,495	6,163	53.8	22	4.3	197.8
2021	645,570	6,221	51.6	24	4.4	152.1
2022	647,064	6,220	51.7	17	3.2	167.7
2023	647,464	5,924	49.0	15	3.0	167.1
2024	648,493	5,888	48.8	14	2.8	169.4

1. Population is the census population for those years when the census was taken and is the mid-year estimate for non-census years.
2. Number of pregnancies includes Live Births and Fetal Deaths for 1960 and 1970, and Live Births, Fetal Deaths, and Abortions for 1980 – present.
3. Rate per 1,000 women ages 15-44.
4. Events per 1,000 Live Births and Fetal Deaths.
5. Events per 1,000 Live Births.

Summary and Population

Births

Summary

In 2024, 5,023 babies were born to Vermont residents. This represents a decrease of 40 births from 2023. The crude birth rate in 2024 was 7.7 per 1,000 Vermont residents, a decrease from the 2023 rate of 7.8. The U.S. birth rate for 2024 was 10.7. The Vermont birth rate peaked in 1955 at 24 per 1,000 residents; it then dropped for two decades, remained relatively stable from the late 1970's through the 1980's, slowly and steadily decreased through the 1990's, and has continued a slow decline since.

Fertility

Although the crude birth rate is based on the total population, a better measure of birth patterns is the fertility rate which is based on the population of women ages 15 through 44, the peak child-bearing years. The 2024 Vermont fertility rate was 41.5 per 1,000 women ages 15 through 44 (Table B-13, Figure 4), a decrease from the 2023 rate of 42.0. The U.S. fertility rate was 53.8 in 2024. The fertility rate in Vermont peaked in 1960 at 126, declined through the 1960's and 1970's, leveled off slightly in the 1980's, steadily declined through the early 90's, and remained fairly stable from 1995 through 2014. From 2015 through 2024 the rate appears to be on a declining trend again. Age-specific fertility rates have generally declined for women less than 35 years old and increased among those 35-44 years old.

Figure 4. Age-Specific Fertility Rates, Selected Years 1980-2024

38.5% of births in 2024 were to women in their twenties (Table B-12b), down from 49.5% in 2010. Women aged 30 and over accounted for over half (59%) of births, up from 44.1% in 2010 and 43.9% in 2000. Women aged 15 through 19 accounted for 2.6% of births, down from 6.4% in 2010 and 8.0% in 2000.

Births

Birth Weight

The median birth weight for all resident births in 2024 was 3,370 grams (approximately 7 pounds 7 ounces). Low birth weight infants are those born weighing less than 2,500 grams (5 pounds 8 ounces). Low birth weight infants are much more likely than heavier babies to suffer short and long-term disabilities, and to die in infancy. In 2024, 7.2% of Vermont resident births were low birth weight (Table B-17b), and 0.9% were very low birth weight (under 1,500 grams or 3 pounds 5 ounces). The U.S. low birth weight rate for 2024 was 8.5%.

Low birth weight rates in Vermont varied by age group in 2024 (Table B-19a), with the highest rate (13.3%) occurring in the 15-19 age group. The lowest rate was for women ages 25-29 at 6.5%.

Infant birth weight is also positively associated with maternal weight gain: mothers who do not gain adequate weight during pregnancy are more likely to deliver low birth weight infants. On the other hand, there are also risks associated with gaining too much weight including delivery complications and maternal and infant obesity. Although the weight gained by 22.4% of Vermont mothers in 2024 fell below the range recommended by the Institute of Medicine, 48.3% gained above the recommended range (Table B-33b). Please refer to Explanatory Notes (page 12) for further information on the guidelines.

The single most important preventable risk factor for low birth weight is smoking during pregnancy. The low-birth-weight rate among women who smoked cigarettes during their pregnancy was 22.2% compared to 6.3% among women who did not smoke during pregnancy (Table B-27). The rate of women who reported smoking during pregnancy in 2024 was 5.9%, a decrease from 7.4% reported in 2023. Among those who smoked before pregnancy or during the first trimester, 24.1% quit, an increase from the 2023 quit rate of 23.0%.

Prenatal Care

Early, comprehensive, and high-quality prenatal care is essential for a healthy pregnancy and birth. Through prenatal care, pregnant women are screened for medical conditions and counseled on nutrition, behavioral risks (such as using tobacco and alcohol), and domestic violence.

In 2024, 87.7% of the babies were born to mothers who began prenatal care in the first three months of pregnancy (Table B-16b), down from 89.1% in 2023.

The proportion of births in 2024 to Vermont mothers who delayed care to the third trimester or received no prenatal care was 2.8%, similar to the 2.6% in 2023.

Based on the Adequacy of Prenatal Care Utilization (APNCU) Index, in 2024, 86.9% of Vermont resident mothers received at least adequate prenatal care, (Table B-36a). The percentage of

Births

Vermont mothers who received inadequate care was 7.0%. Mothers aged 15 to 19 (14.1%) had the highest percentage of pregnancies with inadequate care, while mothers aged 30 to 34 had the highest percentage of pregnancies with adequate plus intensive care (88.2%).

Medical Risk Factors

Of births with medical risk factors reported for the mother, the most common were gestational hypertension and gestational diabetes (Table B-29a). The most common reported risks of labor and delivery were spinal anesthesia during labor, induction of labor, augmentation of labor, fetal intolerance, and antibiotics received by mother during labor (Table B-29b).

Deliveries

Of babies born in Vermont hospitals in 2024, 27.1% were delivered by cesarean section (Table B-25b) compared to 32.3% for U.S. women in 2024. The primary cesarean section rate was 20.0% in Vermont for 2024, lower than the 22.9% for U.S. women in 2024. Of mothers delivering in Vermont hospitals in 2024 who had a previous delivery by cesarean section, 24.0% had vaginal births, compared to 15.5% for mothers in the U.S. in 2024.

⁽¹⁾ According to the adequacy of prenatal care utilization index developed by Milton Kotelchuck, Ph.D., M.P.H.

- Intensive: PNC begun by month 4 and \geq 110% of expected visits were received.
- Adequate: PNC begun by month 4 and 80-109% of expected visits were received.
- Intermediate: PNC begun by month 4 and 50-79% of expected visits were received.
- Inadequate: PNC begun after month 4 or $<$ 50% of expected visits were received.

Vermont data points can be found in Table A-1. Data points for the U.S. can be found in Appendix D.

Deaths

Figure 9. Five Leading Causes of Death in Vermont in 2024, Vermont and U.S. Age-Adjusted Death Rates per 100,000 Population

Vermont and U.S. rates in this chart are age-adjusted to the 2000 U.S. standard population for comparison purposes.

Deaths

Summary

There were 6,707 Vermont resident deaths in 2024, 64 less than in 2023. The crude death rate was 10.3 per 1,000 population. The death rate has been generally increasing since 2010 when the rate was 8.6. Prior to 2010, it had been slowly declining from 11.2 in 1960, to 10.0 in 1970, down to 9.0 in 1980 and 8.2 in 1990, and then leveling off from 1990 to 2009 with rates varying between 8.1 and 8.5. The Vermont crude death rate was slightly lower than the U.S. crude death rate from 1988 through 2005 and has been slightly higher than the U.S. crude death rate since 2007, with the exception of 2020 (Figure 8).

Leading Causes

Heart disease was the leading cause of death for Vermonters in 2024, accounting for 1,533 deaths. From the 1960's through 2006, the leading cause of death in Vermont were heart disease, followed by cancer, respectively. In 2007, cancer took over as the leading cause of death among Vermonters and remained there through 2019, with the exception of 2016 when heart disease was the leading cause. Since 2020 heart disease and cancer have alternated as the leading cause of death, with heart disease (1,533 resident deaths), as the number one and cancer (1,476 resident deaths) the second leading cause in 2024. Heart disease and cancer accounted for 44.9% of deaths in 2024 (Table C-11), and cancer of the trachea, bronchus and lung were the leading cause of cancer death. The heart disease age adjusted death rate in 2024 was 157.6 per 100,000 population, a decrease from the 2000 rate of 229.5 and 2020 rate of 170.9, but a slight increase from the 2010 rate of 153.2. The age adjusted death rate for cancer has trended down from 197.9 per 100,00 in 2000 to 144.1 in 2024 (Table C-1).

Accidents (or unintentional injuries) has maintained its position as the third leading cause of death since 2016. Accidents resulted in the death of 528 Vermont residents in 2024, and the age adjusted rate has been trending upward from 37.5 per 100,000 population in 2000 to 71.2 in 2024. Among accidental deaths the majority were due to falls, 197 deaths, followed closely by accidental poisoning, 195 deaths.

Alzheimer's disease was the fourth leading cause of death in 2024, up from the fifth leading cause in 2023. In 2024, 322 Vermonters died from Alzheimer's disease.

Chronic lower respiratory diseases (formerly referred to as chronic obstructive pulmonary diseases) was the fifth leading cause of death in Vermont in 2024, down from the fourth leading cause in 2023, and accounting for 314 deaths in 2024.

Deaths

Cerebrovascular disease (stroke) (6), diabetes mellitus (7), Parkinson's disease (8), intentional self-harm (suicide) (9), and chronic liver disease and cirrhosis (10) round out the top ten leading causes of death for Vermont residents in 2024.

The leading causes of death varied with age (Table C-2 and Table C-11). Accidents (unintentional injuries) were the leading cause of death for people ages 15 to 54. Cancer was the leading cause of death, followed by heart disease for 55 to 84 year olds, and at ages 85 and higher, the causes were reversed with heart disease as the leading cause, followed by cancer.

Death rates dramatically increase after age 75. While people ages 75 and over comprised only 9.4% of the total population in 2024, they accounted for 59.5% of total deaths. The majority of leading causes in this age group were chronic diseases.

The leading causes of death varied by sex in 2024 (Table C-1 and Table C-9). Cancer was the leading cause of death for women followed by heart disease, and this was reversed for men with heart disease as the leading cause followed by cancer. Alzheimer's disease was the third leading cause of death for women and the sixth leading cause for men. Accidents were the third leading cause for men and the fourth leading cause for women. Chronic lower respiratory disease was the fourth leading cause for men and the fifth leading cause for women. Diabetes mellitus was the fifth leading cause for men and the seventh leading cause for women.

Place of Death

Deaths occurring in a hospital accounted for 31.5% of 2024 Vermont resident deaths (Table C-13), less than 35.8% in 2010, and down from 42% in 2000. In 2024, 36.7% of Vermont resident deaths occurred at home and 20.1% occurred in a nursing home or long-term care facility.

Deaths

Infant Deaths, Fetal Deaths, and Abortions

Summary

Infant Deaths

In 2024, there were 28 resident infant deaths, which equates to a rate of 5.6 infant deaths per 1,000 live births, higher than the 2023 rate of 3.2 and the highest rate since 2018, when it was 6.4 (Table A-2). This rate is higher than the 2024 U.S. rate of 5.5.

Twenty (71%) infant deaths occurred during the neonatal period, that is before the infant became 28 days old (Table D-1). The neonatal death rate was 4.0 deaths per 1,000 live births (Table D-3), above the 2024 U.S. neonatal death rate of 3.7. The 2024 rate was higher than the 2023 rate of 2.2 and is the highest rate since 2009, when it was 4.4 (Table A-2).

One of the most important risk factors in infant mortality is low birth weight (Table D-5). Of resident infants who died in 2024, 68% had a birth weight less than 2500 grams (5 pounds 8 ounces), while 7.2% of all resident births were low birth weight. The infant mortality rate for low weight births was 52.3 deaths per 1,000 live births.

Fetal Deaths

Unlike births and deaths, reports of fetal deaths and abortions are not shared among states. Therefore, statistics concerning these events reflect occurrences in Vermont only and do not include Vermont resident fetal deaths and abortions that occurred in other states.

There were 14 resident fetal deaths in 2024 (Table D-1) for a rate of 2.8 per 1,000 live births and fetal deaths, a decrease from 3.0 per 1,000 live births and fetal deaths in 2023 (Table D-3). Of the resident fetal deaths in Vermont, all 14 weighed less than 2500 grams (Table D-5). From 2022 to 2024, the fetal death rate was highest in the 35 to 39 age group: 3.6 per 1,000 live births and fetal deaths (Table D-3).

Abortions

There were 997 abortions performed in Vermont in 2024, a decrease from 1,015 in 2023. Vermont residents accounted for 851, or 85.4%. This represents a rate of 7.0 per 1,000 Vermont women ages 15 to 44.

Infant Deaths, Fetal Deaths, and Abortions

The abortion ratio is the number of resident abortions occurring in Vermont times 1,000, divided by the total resident live births. The abortion ratio for 2024 was 169.4 abortions per 1,000 live births, an increase from the 167.1 ratio seen in 2023. The U.S. abortion ratio was 199 per 1,000 live births in 2022. Women ages 25 to 29 had the highest age-specific abortion rate, of 11.2 per 1,000 women, followed by women ages 20 to 24 at 10.0.

First trimester abortions (less than or equal to 12 weeks) accounted for 88.6% of all Vermont abortions, and 76.5% of all Vermont abortions were for pregnancies of less than 9 weeks duration (Table E-4).

Marriages and Divorces

Figure 12. Vermont and United States Marriage Rates, Vermont and United States Divorce Rates, 1980 – 2024

Data points for the U.S. population can be found in Appendix D.
 Vermont data points can be found in Table A-1.

Marriages and Divorces

Summary

Marriages

In 2024, 4,786 marriages were performed in Vermont, 109 more than in 2023. The 2024 Vermont marriage rate was 7.4 per 1,000 Vermont resident population, higher than the 2023 U.S. rate of 6.1. Marriages between two out-of-state residents accounted for 36.5% of the marriages in Vermont (Table F-2).

There was the usual seasonal variation, with more marriages occurring in the fall than in any other season. September (800), October (734), and August (712) were the most popular months for marriages in 2024 (Table F-5).

More than two-thirds (66.9%) of marriages were the first marriage for both applicants (Table F-4). For Applicant B, 75.1% were first marriages, and for Applicant A, 75.0% were first marriages. Remarriages for both applicants accounted for 15.5% of marriages in Vermont.

Civil ceremonies accounted for 68.6% of marriages in 2024 (Table F-6).

Divorces

There were 1,521 divorces granted in 2024, 18 less than in 2023. This represents a rate of 2.3 per 1,000 residents, less than the 2023 U.S. rate of 2.4.

The median length of marriages ending in divorce was 10 years, with a range of 4 months to 60 years. The median age at the time of divorce was 43 for Applicant A with a range of 20 to 86 years. The median age at the time of divorce was 44 for Applicant B, with a range of 19 to 83 years (Table G-2).

Springfield Hospital	Windsor	Springfield
University of Vermont Medical Center	Chittenden	Burlington
Vermont Psychiatric Care Hospital	Washington	Berlin
Veterans Administration Medical Center	Windsor	White River Junction

Appendices

Appendix B. List of the 113 Selected Causes of Death, Enterocolitis due to Clostridium Difficile, and COVID-19

Cause of Death – Page 1 of 4	ICD-10 ⁽¹⁾ Codes
Salmonella infections	A01-A02
Shigellosis and amebiasis	A03, A06
Certain other intestinal infections	A04, A07-A09
Tuberculosis	A16-A19
Respiratory tuberculosis	A16
Other tuberculosis	A17-A19
Whooping cough	A37
Scarlet fever and erysipelas	A38, A46
Meningococcal infection	A39
Septicemia	A40-A41
Syphilis	A50-A53
Acute poliomyelitis	A80
Arthropod-borne viral encephalitis	A83-A84, A85.2
Measles	B05
Viral hepatitis	B15-B19
Human immunodeficiency virus (HIV) disease	B20-B24
Malaria	B50-B54
Other and unspecified infectious and parasitic diseases and their sequelae	A00, A05, A20-A36, A54-A79, A81-A82, A85.0-A85.1, A85.8, A86-B04, B06-B09, B25-B49, B55-B99, U071
Malignant neoplasms	C00-C97
of lip, oral cavity and pharynx	C00-C14
of esophagus	C15
of stomach	C16
of colon, rectum and anus	C18-C21
of liver and intrahepatic bile ducts	C22
of pancreas	C25
of larynx	C32
of trachea, bronchus and lung	C33-C34
of skin	C43
of breast	C50
of cervix uteri	C53
of corpus uteri and uterus, part unspecified	C54-C55
of ovary	C56
of prostate	C61
of kidney and renal pelvis	C64-C65
of bladder	C67
of meninges, brain and other parts of central nervous system	C70-C72
of lymphoid, hematopoietic and related tissue	C81-C96
Hodgkin's disease	C81
Non-Hodgkin's lymphoma	C82-C85
Leukemia	C91-C95
Multiple myeloma and immunoproliferative neoplasms	C88, C90

Cause of Death Continued – Page 2 of 4	ICD-10 ⁽¹⁾ Codes
Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue	C96
All other and unspecified malignant neoplasms	C17, C23-C24, C26-C31, C37-C41, C44-C49, C51- C52, C57-C60, C62-C63, C66, C68-C69, C73-C80, C97
In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior	D00-D48
Anemias	D50-D64
Diabetes mellitus	E10-E14
Nutritional deficiencies	E40-E64
Malnutrition	E40-E46
Other nutritional deficiencies	E50-E64
Meningitis	G00, G03
Parkinson’s disease	G20-G21
Alzheimer’s disease	G30
Major cardiovascular diseases	I00-I78
Diseases of heart	I00-I09, I11, I13, I20-I51
Acute rheumatic fever and chronic rheumatic heart diseases	I00-I09
Hypertensive heart disease	I11
Hypertensive heart and renal disease	I13
Ischemic heart diseases	I20-I25
Acute myocardial infarction	I21-I22
Other acute ischemic heart diseases	I24
Other forms of chronic ischemic heart disease	I20, I25
Atherosclerotic cardiovascular disease, so described	I25.0
All other forms of chronic ischemic heart disease	I20, I25.1-I25.9
Other heart diseases	I26-I51
Acute and subacute endocarditis	I33
Diseases of pericardium and acute myocarditis	I30-I31, I40
Heart failure	I50
All other forms of heart disease	I26-I28, I34-I38, I42-I49, I51
Essential (primary) hypertension and hypertensive renal disease	I10, I12
Cerebrovascular diseases	I60-I69
Atherosclerosis	I70
Other diseases of circulatory system	I71-I78
Aortic aneurysm and dissection	I71
Other diseases of arteries, arterioles and capillaries	I72-I78
Other disorders of circulatory system	I80-I99
Influenza and pneumonia	J10-J18
Influenza	J10-J11
Pneumonia	J12-J18
Other acute lower respiratory infections	J20-J22
Acute bronchitis and bronchiolitis	J20-J21
Unspecified acute lower respiratory infection	J22
Chronic lower respiratory diseases	J40-J47
Bronchitis, chronic and unspecified	J40-J42
Emphysema	J43

Cause of Death Continued – Page 3 of 4	ICD-10⁽¹⁾ Codes
Asthma	J45-J46
Other chronic lower respiratory diseases	J44, J47
Pneumoconioses and chemical effects	J60-J66, J68, U070
Pneumonitis due to solids and liquids	J69
Other diseases of respiratory system	J00-J06, J30-J39, J67, J70-J98
Peptic ulcer	K25-K28
Diseases of appendix	K35-K38
Hernia	K40-K46
Chronic liver disease and cirrhosis	K70, K73-K74
Alcoholic liver disease	K70
Other chronic liver disease and cirrhosis	K73-K74
Cholelithiasis and other disorders of gallbladder	K80-K82
Nephritis, nephrotic syndrome and nephrosis	N00-N07, N17-N19, N25-N27
Acute and rapidly progressive nephritic and nephrotic syndrome	N00-N01, N04
Chronic glomerulonephritis, nephritis and nephropathy not specified as acute or chronic, and renal sclerosis unspecified	N02-N03, N05-N07, N26
Renal failure	N17-N19
Other disorders of kidney	N25, N27
Infections of kidney	N10-N12, N13.6, N15.1
Hyperplasia of prostate	N40
Inflammatory diseases of female pelvic organs	N70-N76
Pregnancy, childbirth and the puerperium	O00-O99
Pregnancy with abortive outcome	O00-O07
Other complications of pregnancy, childbirth and the puerperium	O10-O99
Certain conditions originating in the perinatal period	P00-P96
Congenital malformations, deformations and chromosomal abnormalities	Q00-Q99
Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	R00-R99
All other diseases (Residual)	Residual
Accidents (unintentional injuries)	V01-X59, Y85-Y86
Transport accidents	V01-V99, Y85
Motor vehicle accidents	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2
Other land transport accidents	V01, V05-V06, V09.1, V09.3-V09.9, V10-V11, V15-V18, V19.3, V19.8-V19.9, V80.0-V80.2, V80.6-V80.9, V81.2-V81.9, V82.2-V82.9, V87.9, V88.9, V89.1, V89.3, V89.9
Water, air and space, and other and unspecified transport accidents and their sequelae	V90-V99, Y85
Nontransport accidents	W00-X59, Y86
Falls	W00-W19
Accidental discharge of firearms	W32-W34
Accidental drowning and submersion	W65-W74
Accidental exposure to smoke, fire and flames	X00-X09

Cause of Death Continued – Page 4 of 4	ICD-10 ⁽¹⁾ Codes
Accidental poisoning and exposure to noxious substances	X40-X49
Other and unspecified nontransport accidents and their sequelae	W20-W31, W35-W64, W75-W99, X10-X39, X50-X59, Y86
Intentional self-harm (suicide)	X60-X84, Y87.0
Intentional self-harm (suicide) by discharge of firearms	X72-X74
