

Vermont Census Counts and Intercensal Population Estimates

2000-2010

Peter Shumlin, Governor
State of Vermont

Doug Racine, Secretary
Agency of Human Services

Harry Chen, MD, Commissioner
Department of Health

Updated - January, 2013

This report was produced by the Vermont Department of Health using data from the U.S. Bureau of the Census and the National Center for Health Statistics.

Summary	1
Methods	65

List of Figures

1. Population of Vermont counties, 2000, 2010.....	2
2. Population age-sex distribution of Vermont, 2000, 2010	3
3. Population of Vermont towns, percent population growth 2000-2010	4
4. Population of Vermont towns, 2010	5

List of Tables

1. Vermont Census counts and intercensal population estimates, by county, 2000-2010	6
2. Vermont Census counts and intercensal population estimates, by town, 2000-2010	7
3. Vermont Census counts and intercensal population estimates, by age, sex and county	20

SUMMARY

These intercensal population estimates for 2001-2009* for the towns and counties of Vermont, and the age-sex distribution of the counties, update and replace the postcensal estimates which have been published in the past decade. These new estimates are based on the 2000 and 2010 Census counts.

The Vermont population increased from 608,827 in 2000 to 625,741 in 2010, an increase of 16,419 (2.8%). The largest increase in population was seen in Chittenden County, an increase of 9,974 people, this was also the largest percentage increase at 6.8%. Three counties (Essex, Rutland, Windsor) lost population from 2000 to 2010.

The age distribution of Vermont's population changed noticeably from 2000 to 2010. There was a decline in population aged less than 15, and from 30-44. The largest increase was seen in the population aged 55-64.

These estimates smooth out some of the larger year-to-year fluctuations seen in the earlier post-censal estimates. Most notably, the 2001 postcensal estimates were produced without benefit of age detail from the 2000 Census, so the 2001 post-censal age group estimates were not very accurate. Also, the post-censal estimates over-estimated the population in the 20-29 age group, over-estimated growth in Grand Isle County, and a data error led to a very high estimate for the 2009 Lamoille County age 65 and over population.

A description of the methods used to produce these estimates is included at the end of this report.

* In October 2012, The U.S. Census Bureau released revised intercensal estimates for 2001-2009. As of January 4, 2013, the data posted here reflect those revisions and should replace any population data downloaded from this site prior to that date.

METHODS

Following the 2010 Census, the US Census Bureau produced revised estimates for the years 2001-2009 to reconcile the post-censal estimates with the 2010 Census counts and to provide a consistent time-series reflecting the most recent Census results. The Census Bureau released revised intercensal estimates in October of 2012*. The methodology used to produce the state and county estimates by age and sex, and the town level population estimates (without demographic detail) can be found on-line at:

http://www.census.gov/popest/methodology/2000-2010_Intercensal_Estimates_Methodology.pdf

The Census Bureau releases estimates for five year age intervals (0-4, 5-9, etc), while the Vermont Department of Health has historically published estimates with finer age detail for children. In collaboration with the National Center for Health Statistics, the Census Bureau produces county estimates by single year of age. These county estimates by single year of age are the source for the county age-sex tables published here. Learn more about the collaboration between the Census Bureau Population Estimates Program and NCHS here:

http://www.cdc.gov/nchs/nvss/bridged_race.htm#release

* As of January 4, 2013, the data posted here reflect those revisions and should replace any population data downloaded from this site prior to that date.
