Conclusion & Contact Information	41

Purpose of this Profile

This profile is provided by the Division of Alcohol and Drug Abuse Programs (ADAP), the State Epidemiological Outcomes Workgroup (SEOW) and the Research, Epidemiology, and Evaluation Unit of the Vermont Department of Health as a resource to the District Offices and community-based prevention partners.

Purpose of this Profile

This profile includes estimates of substance use/misuse prevalence from State surveys, as well as other data to assist the District Offices and prevention partners to focus on the following priorities for 2021:

- 1) Build, maintain, and strengthen the state, regional and community level infrastructure capacity needed to address substance use and misuse prevention and intervention across Vermont, and
- 2) Prevent and reduce underage drinking, binge drinking, and marijuana use/ misuse among youth and young adults.

Vermont Prescription Drug Monitoring Program (PDMP)

Vermont's PDMP, known as the **Vermont Prescription Monitoring System (VPMS)**, is a statewide electronic database of controlled substance prescriptions dispensed from Vermont-licensed pharmacies that became operational in January of 2009.

VPMS collects, monitors and analyzes electronically transmitted prescribing and dispensing data submitted by pharmacies and dispensing practitioners. This information is used to support and coordinate clinical care and substance misuse prevention, and to assist in understanding the patterns of controlled substance prescribing and dispensing in Vermont.

Source: [Vermont Prescription Monitoring System](#)

Vermont Prescription Monitoring System (VPMS)

VPMS quarterly reports summarize data for all Schedule II – IV prescriptions that were dispensed by Vermont-licensed pharmacies. The next slide includes data from the VPMS quarterly report covering the period of 07/01/2020 - 09/30/2020. The drug types included are:

- Opioid Analgesic – opioids used to treat pain
- Medication-Assisted Treatment (MAT) Opioids – opioids used to treat opioid use disorder
- Benzodiazepines – sedatives used for anxiety, insomnia and other conditions
- Stimulants - medication used to increase alertness, attention, energy

Source: [VPMS 2020 Quarter 3 Report](#)

Percent of Population Receiving At Least One Prescription in Drug Class, July - September 2020

	OPIOID ANALGESIC	MAT	BENZODIAZEPINE	STIMULANT

ORANGE	3.1%	1.1%	3.3%	1.9%
ORLEANS	5.5%	1.0%	4.9%	3.5%
RUTLAND	5.1%	1.6%	4.5%	2.6%
WASHINGTON	4.2%	0.8%	4.7%	3.0%
WINDHAM	4.4%	0.8%	4.9%	4.0%
WINDSOR	2.9%	0.9%	3.0%	1.7%
Vermont	4.0%	1.1%	4.0%	2.7%

Morphine Milligram Equivalents (MME) to measure opioid prescriptions

Using Morphine Milligram Equivalents (MME) allows for comparison between types and strengths of opioids.

MME is a way to express the strength of an opioid analgesic prescription as though the prescription were converted to morphine.

For instance, the following medications each provide 50 MME/day:

- 10 tablets of hydrocodone/acetaminophen 5/300
- 2 tablets of oxycodone sustained-release 15 mg
- <3 tablets of methadone 5 mg

Source: [VPMS 2020 Quarter 3 Report](#)

The total amount of opioids dispensed has decreased over time

Vermont Total MME Dispensed by Quarter

Since Quarter 1 of 2016, the Vermont total MME has decreased by over 44%
