

# **2018 Substance Use Disorder Treatment**

**Trends: People Receiving Substance Use Disorder Treatment by Providers Funded by Vermont Department of Health Division of Alcohol and Drug Abuse Programs**

January 2020

# Overview

This report includes information about people treated for substance use disorder (SUD) at providers funded by the Vermont Department of Health Division of Alcohol and Drug Abuse Programs (ADAP). These services include outpatient treatment, intensive outpatient treatment, medication assisted treatment (MAT) in opioid treatment programs, and non-hospital based residential detoxification and treatment. Reporting comes from the providers and at times there are reporting gaps that impact trends.

Providers who are not funded by ADAP are not required to submit treatment data. This report does not include SUD treatment provided by private practitioner licensed counselors, hospitals, and medical practitioners who provide SUD treatment. Office based opioid treatment which is known as a “spoke” service in Vermont is also excluded from this report.

For more comprehensive information about medication assisted treatment for opioid use disorders in the hub and spoke system, please search for [reports on our website](#).

# Methods

Providers funded by ADAP are required to report treatment admissions, services, and discharges each month to the Substance Abuse Treatment Information System (SATIS). Data are validated when uploaded into the system. Occasionally, data lags or missing data impact trends and when it is substantial, it is noted.

This report is based on the year in which a person received treatment services unless otherwise noted. For clarity, this report reflects unduplicated numbers of people served so categories used reflect information associated with the person's most recent admission to care unless otherwise noted.

A person may have been admitted to treatment in a year before the reporting year but continue to receive services in additional years and would appear in each year in which they received service. People may also have been admitted more than once in a year and would appear only once in the report.

- The substance reported is the primary substance used at the time of the most recent admission. People often use more than one substance at once.
- Age is categorized as the person's lowest age during reporting year.
- County is based on the county of residence at the time of the most recent admission

Data are suppressed when fewer than five people are served.

If you have questions about this report, please contact [anne.vandonsel@Vermont.gov](mailto:anne.vandonsel@Vermont.gov).
