

# Weekly Summary of Vermont COVID-19 Data

Reflecting cases identified between  
March 5 – May 7, 2020

Date published: May 11, 2020. This summary will be updated every Friday.

# Common Terms and Data Sources

You will find data presented in a few different ways throughout this document:

- **Count:** the number of people who have tested positive for COVID-19 (overall or in a particular group)
- **Rate:** the number of people who have tested positive for COVID-19 in a particular group, divided by the total number of people in that group. Using rates allows for more direct comparisons between groups.
- **Growth rate:** a measure of the percent change in COVID-19 cases over time; this tells us how quickly or slowly the disease is spreading in Vermont

For geographic information, please see the [COVID-19 Data Dashboard](#) or [Town Map](#). For more information on data sources, please see our [Data Notes](#) document.

# COVID-19 in Vermont

An overview of our number of cases and laboratory testing to date.

# Total Number of Cases in Vermont: 918

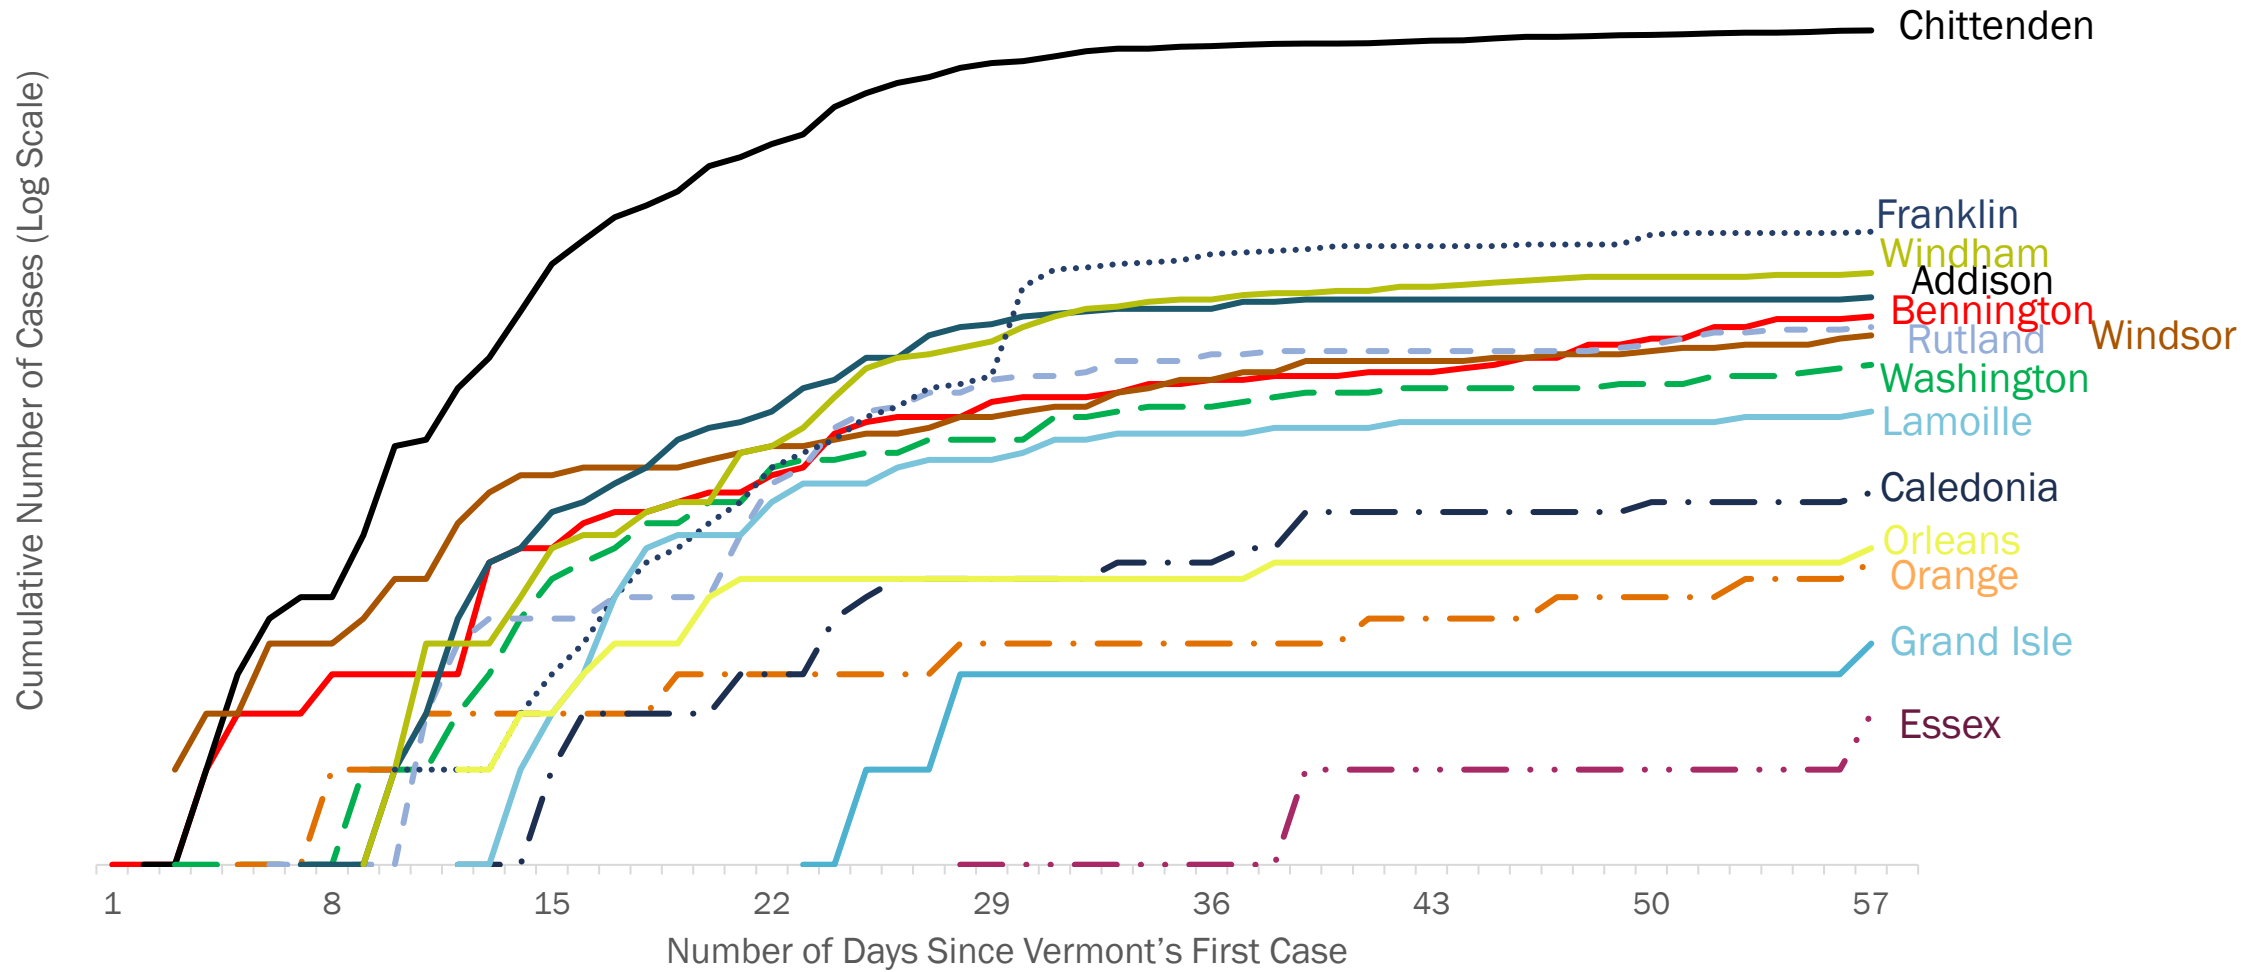

80

The daily number of COVID-19 cases in Vermont peaked on April 3.

# Most counties have reached a plateau in the number of new cases.

Growth over time by county (n=915)

**Percent of positive COVID-19 tests may indicate how prevalent the disease is in the population.**

**Percent Positive to Date**

**Percent Positive This Week**

**2,934**  
People Tested this Week

**21,162**  
People Tested to Date

\*Not a stable estimate due to small numbers. There were 9 total tests and 1 was positive.

# Case Demographics

Who has been impacted by COVID-19 in Vermont?

**Rates of COVID-19 are disproportionately high among Vermonters 80 years and older.**

Rate per 10,000 Vermonters

**Females and males have similar rates of COVID-19.**

Rate per 10,000 Vermonters

**There are differences in age and sex of Vermonters with COVID-19.**

Rates of COVID-19 by Age Group for Females and Males per 10,000 Vermonters

**White Vermonters represent the majority of COVID-19 cases. African American Vermonters have the highest rate.**

Rate per 10,000 Vermonters

**Non-Hispanic Vermonters represent the majority of COVID-19 cases. Hispanic Vermonters have the higher rate.**

Rate per 10,000 Vermonters

# Clinical Course

What symptoms have Vermonters experienced? How many have been hospitalized? How many have died?

The day **symptoms start** is important to know when people with **COVID-19** become infectious.

Illnesses occurring in this window may not be reported yet; median reporting lag = 6 days →

Note: Date of symptom onset is not always known.

Sign or Symptom	Percent of Symptomatic Cases
Cough	75%
Fatigue	70%
Fever	55%
Headache	55%
Muscle Pain	53%

**15 days**  
Average illness duration

**Most Vermonters with COVID-19 are not hospitalized.**

**17%**  
Of those hospitalized who were on a ventilator

**37%**  
Of those hospitalized who were in the ICU

**8 days**  
Average hospital stay (range: 0-18 days)

**Vermonters 80 years and older are more likely to be hospitalized for COVID-19.**

Rate per 10,000 Vermonters

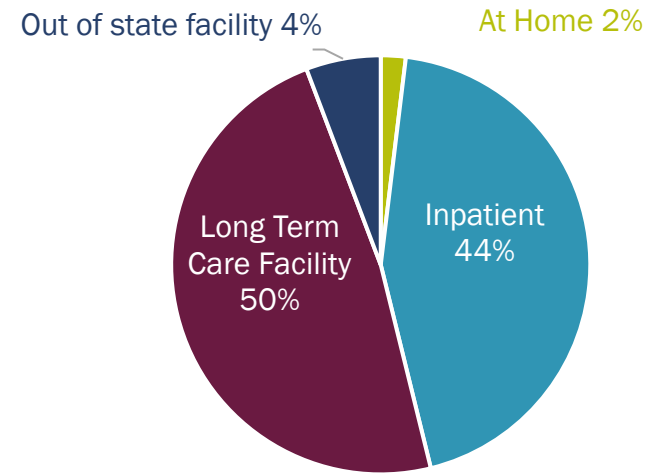

**Vermonters 80 years and older** have higher rates of COVID-19 death than other age groups.

Rate per 10,000 Vermonters

Most COVID-19 deaths occurred in an **inpatient hospital setting** or a **long-term care facility**.

**Males** have higher rates of COVID-19 death than **females**.

Rate per 10,000 Vermonters

**White** Vermonters represent a majority of COVID-19 deaths. However the rate is higher among **racial minorities**.

Rate per 10,000 Vermonters

# Outbreaks

How is COVID-19 impacting group settings?

# What is an outbreak?

1. For congregate care facilities (long term care facility or skilled nursing facility):

- A single resident with a positive COVID-19 laboratory test and one or more additional residents with respiratory illness

OR

- Two or more residents with at least two of the following symptoms: fever (temp  $\geq 100^{\circ}\text{F}$ ), cough, difficulty breathing/shortness of breath

2. For other settings (residential communities, businesses):

- Two or more epidemiologically-linked confirmed COVID-19 cases where there's an opportunity to stop transmission

**26%** of COVID-19 cases are associated with an outbreak

## Outbreaks

**5** Active

2 Resolved

**154** cases among residents

**79** cases among staff

## Vermont COVID-19 Cases Associated with an Outbreak Over Time

90

## Vermont COVID-19 Deaths Associated with an Outbreak Over Time

4

In facilities with an outbreak, **79% of residents** have been tested.

In facilities with an outbreak, **85% of staff** have been tested.

**While only 26% of all COVID-19 cases are associated with outbreaks, more than half of COVID-19-related deaths occur in outbreak settings.**

Source: Vermont Department of Health  
Reflects confirmed data as of 5/7/2020.

Note: Examples of a health setting include long-term care or assisted living facilities, therapeutic treatment centers, and behavioral health institutions. Examples of a non-health setting include correctional facilities, senior housing communities, businesses, and homeless shelters. Vermont has not experienced an outbreak in all health and non-health settings.

# **Syndromic Surveillance**

What we can learn from emergency room and urgent care centers?

## The percent of emergent care visits for COVID-19-like illness is decreasing.

Syndromic surveillance from 13 of 14 Vermont hospitals and 2 urgent care centers. Monitoring this data acts as an early indicator of potential spikes of COVID-19 in the community.

Interpret with caution, there is a chance for over or underestimation given the lag in reporting.

COVID-19-like illness diagnosis is determined using the patient's chief complaint and/or discharge diagnosis.

COVID-19-like illness is the presence of a fever with the addition of shortness of breath, difficulty breathing, or cough.

COVID-19-like illness excludes patients with an influenza discharge diagnosis.

## **Weekly Spotlight: Pre-existing Conditions**

The Health Department has information about pre-existing conditions in 77% (706) of 918 total COVID-19 cases. This section focuses on those 706 cases.

# Approximately 62% of people\* with COVID-19 have a pre-existing condition.

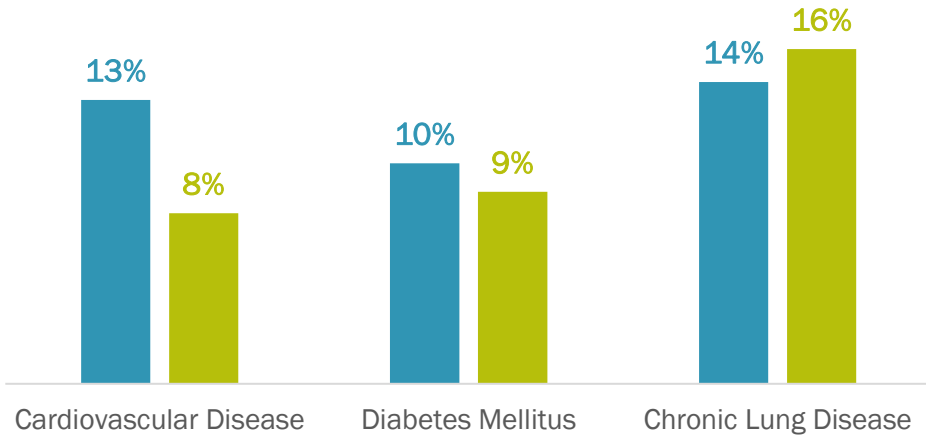

\*of the 706 people that the Health Department has pre-existing condition data.

Condition	Count	Percentage
Heart Disease	94	13%
Chronic Lung Disease (includes asthma and COPD)	73	14%
Chronic Liver Disease	7	1%
Chronic Kidney Disease	17	2%
Current/Former Smoker	185	26%
Diabetes	73	10%
Immunocompromised Condition	38	5%
Neurologic Condition/Intellectual Disability	17	2%
Other Chronic Condition**	224	32%
Pregnant	6	1%

**33% of people with a pre-existing condition have two or more conditions.**

\*\*Not mutually exclusive, includes things like arthritis, thyroid conditions, multiple free text entries.

**Prevalence of certain conditions in COVID-19 patients and Vermont adults.**

Data Source: Cardiovascular disease and diabetes, BRFSS 2018 annual report. Chronic lung disease, 3-4-50 Community profile (2016-2017 BRFSS).

**COVID-19 patients with pre-existing conditions tend to be older than those without pre-existing conditions.**

**Prevalence of pre-existing conditions is approximately equal between female and male COVID-19 patients.**

Vermont Department of Health

**A higher percentage of COVID-19 patients with pre-existing conditions have been hospitalized than those without pre-existing conditions.**
