

Some Moderna products may be administered as 0.25mL or 0.5mL depending on the usage. Below is guidance on tracking and accounting for wasted doses of **Moderna Bivalent Product, 5 dose vials**, in the Vaccine Inventory Management System (VIMS).

Key Points:

- Report waste based on doses administered, **NOT** discarded volume.
Example: 5 doses administered: 4 doses (0.25mL), 1 dose (0.50mL)
Report: Waste = 0, Admin = 5, discard remaining volume
- You will report waste only if less than the Depot Increment (5 doses per vial) is administered.
Example: 4 doses administered: 2 doses (0.25mL), 2 doses (0.50mL)
Report: Waste = 1, Admin = 4, discard remaining volume
- You will not report waste if 5 or more doses are administered.
Example: 7 doses administered: 4 doses (0.25mL), 3 doses (0.5mL)
Report: Waste = 0, Admin = 5, discard remaining volume
- No more than the Depot Increment will ever be reported as administered in VIMS.
Example: 10 doses administered: 10 doses (0.25mL)
Report: Waste = 0, Admin = 5, no remaining volume

Process:

- Keep track of the number of doses drawn from the vial.
- Discard the remaining volume when the beyond use time (12 hrs. after puncture) passes.
- Report any doses not administered as Adjust Out > Waste > No Eligible Person in VIMS.
- There is no need to report additional administered doses beyond the Depot Increment.
