

Entering Influenza Immunizations into the IMR – 2020-21

Flu shots – they are not all the same! The guidance below can help you record influenza immunizations accurately in your Electronic Health Record or in the Vermont Immunization Registry. It includes all influenza formulations licensed in the US during this influenza season. When formulation is unknown, as in a historical shot, choose Influenza, Unspecified (88) for inactivated flu or Influenza, Nasal Unspecified for nasal flu.
