

Vermont's Immunization Rule requires vaccination of all children enrolled in center based or family child care, public or independent kindergarten, elementary, secondary, and post-secondary schools. Immunizations protect both individuals and the community.

This document presents information on the percent of students who meet particular vaccination requirements in both independent and public schools. These aggregated data are reported to the Vermont Department of Health by the school nurse or administrator in all Vermont public schools and independent schools by January 1, each year. Data included in this brief are from a point in time, November – December 2021, and may have changed over time.

Official immunization records for all students are collected in kindergarten through 12th grade from parents/guardians for all students upon enrollment to the school.

KEY POINTS

- **94% of Vermont K-12 students in independent and public schools met all required vaccinations in the 2021-2022 school year.**

What counts as meeting the school vaccination requirements?

Students meet the regulation by receiving required vaccines or having evidence of immunity due to history of disease (varicella only) or serology:

- DTaP (diphtheria, tetanus and pertussis) - 5 doses, and Tdap (tetanus, diphtheria and pertussis) – 1 dose at 7th grade entry
- Polio – 4 doses
- MMR (measles, mumps and rubella) – 2 doses
- Hep B – (hepatitis B) – 3 doses
- Varicella (chickenpox) – 2 doses or documentation of history of disease
- Meningococcal - 1 dose required for residential students in grades 7 - 12.¹
- Fully Immunized – percentage of students meeting all vaccine and dose requirements

Why are the school vaccination rates not an exact percentage?

Under the Health Insurance Portability and Accountability Act (HIPAA) [Privacy Rule](#), institutions reporting or releasing data are required to protect personally identifiable health information in their reports from disclosure, or being shared with the public. Thus, various [data suppression rules](#) are applied in the Vermont Department of Health vaccine data to limit publicly sharing health information about individuals. The suppression rules for school-level data applied here are:

- Not share the percentage if there are fewer than 50 students enrolled at the school. For meningococcal, not release the percentage if there are fewer than 50 residential students.
- Not share the percentage if fewer than 6 total students are vaccinated at the school.
- Report school percentages that are higher than 90% as >90%.

¹ No public schools have enrolled residential students. For those Independent schools with a residential program, coverage is calculated only on the residential enrollment, which is not necessarily the entire school population. N/A or not applicable indicates no residential students are enrolled.

94% of Vermont K-12 students in independent and public schools met all required vaccinations.

Percent of Vermont students in kindergarten – 12th grade who completed various vaccine or immunity requirements

	Total Enrollment	% Fully Immunized	% of K-12 students meeting the requirements for:

Data source: Annual Immunization Status Report (2021-2022)

Key Takeaways

94% of Vermont K-12 students in independent and public schools met all required vaccinations in the 2021-2022 school year. Most K-12 schools in Vermont have greater than 90% of students fully immunized.

For more information: contact the Vermont Immunization Program at AHS.VDHImmunizationProgram@vermont.gov.
