The positive controls (positive control) included SARS-CoV-2 positive samples in the control group, the SARS-CoV-2 positive samples in the control group, the SARS-CoV-2 positive samples in the control group, the SARS-CoV-2 positive samples in the control group, and the SARS-CoV-2 positive samples in the control group. The negative controls (negative control) included SARS-CoV-2 negative samples in the control group, the SARS-CoV-2 negative samples in the control group, the SARS-CoV-2 negative samples in the control group, and the SARS-CoV-2 negative samples in the control group. The positive controls were used to determine the positivity of the test, and the negative controls were used to determine the negativity of the test. The test results were compared with the positive controls and negative controls to determine the accuracy of the test.

In conclusion, the positive and negative controls were included in the control group to determine the accuracy of the test. The positive controls demonstrated the positivity of the test, and the negative controls demonstrated the negativity of the test. The test results were compared with the positive controls and negative controls to determine the accuracy of the test.
