

# HPV Screening

1

Almost all cervical cancers are caused by the human papillomavirus (HPV). This is a common virus that can be passed from one person to another during sex.

2

Many people will have an HPV infection at some point in their life. Usually HPV goes away on its own. If it doesn't go away, it might cause cervical cancer over time.

3

You First pays for HPV screening for members over 30 years old.
